ONE

RELEASE NOTES

1.1 Release Notes

HEPCloud's Decision Engine release notes.

The latest release is the designated production release. Decision Engine will support also N-1. New feature development will happen in the development branch and go in the next (N+1) release.

1.1.1 Release 1.6.2

Patch level (bug fix) release.

Issues fixed in this release

Bugs fixed

- DEM 200 (part of it): Invoke correctly channels shutdown: (75eaa90)
- no issue: Use regular expression to support fail_on_error feature (1386d20)

Enhancements:

- Improved CI support (e.g. added pylint tests)
- 217: Add option to de-client –print-product to only print the column names in a data block and-or to print one or more records in key/value format. (c4c7681)

Full list of commits since version 1.6.1

c4c7681: Updated de-query-tool w/ cherry pick of fixes from latest version of PR#332

f964d4b: Fixup use of pytest_postgresql for version 3.0.0

635ffd1: Also run pylint for extra sanity checks

11676ff: Fixed function w/ the same name

b8278f6: Add de-query-tool

75eaa90: Merge pull request #335 from shreyb/publisher_shutdown_from_1.6

77e3d79: Added set_to_shutdown method to TaskManager and accompanying test

1386d20: Merge branch 'knoepfel-fix-fail-on-error' into 1.6

```
73a18b1: Merge branch 'fix-fail-on-error' of https://github.com/knoepfel/decisionengine into knoepfel-fix-fail-on-
error
4f49fb7: Merge branch 'jcpunk-finish-setuptools' into 1.6
a5e5d39: Merge branch 'finish-setuptools' of https://github.com/jcpunk/decisionengine into jcpunk-finish-setuptools
aled252: Merge branch 'vitodb-pylint' into 1.6
c8eddda: Merge branch 'pylint' of https://github.com/vitodb/decisionengine into vitodb-pylint Meerging PR#317 to
release branch 1.6
d7c43b9: Use regular expression to support fail_on_error feature.
ada6692: add support to run pylint tests
efb1e57: Finish migration to pure setuptools
e4dc35e: Merge pull request #314 from jcpunk/jsonnet_syntax
87e32c2: Merge pull request #294 from jcpunk/move-reaper
dec85d5: Merge pull request #319 from jcpunk/task-loop
4108472: Merge pull request #320 from jcpunk/container-swig
920af1c: Merge pull request #321 from knoepfel/include-init-files
650dffa: Don't forget __init__.py files.
1b412e0: The latest m2crypto seems to need swig now
a6e3ab1: Merge pull request #313 from jcpunk/conf-test
1205636: Simplify run loop
de553a7: fix test_client_with_no_server_verbose unit test for Jenkins CI (#315)
30e59dc: fix test_client_with_no_server_verbose unit test for Jenkins CI (#315)
10384a8: Move reaper into its own place and reuse state logic
250c14b: The _validate function doesn't permit missing 'PRODUCES'
5ae1ce9: Make sure syntax error in config names the problem
b899fa2: Add SourceProxy module test. (#307)
7b3df14: Increae coverage of utils (#304)
ddba2a3: Fix duplicate entry warning (#311)
915673f: Test modules minimally (#298)
bc0c21a: Some repos may error out, don't let them kill the build (#297)
924a704: doc: add 1.6.1 release notes
b1ab4d3: doc: fix typo
85e5d71: postgresql: do not print stack trace for low level library (#309)
255c641: Setuptools uses entry return value as an error msg (#303)
2fd8db4: Fix name to match expectations (#305)
9cddb70: updated release notes
7fe0358: Error in more clean methods (#300)
84aa506: Fix a bug in setup.py parsing of requirements. (#301)
```

a58b61b: fix typo in release notes

33660bf: fixed a typo[locuser@fermicloud462 decisionengine]

1.1.2 Release 1.6.1

Patch level (bug fix) release.

Issues fixed in this release

- 306: /etc/decisionengine/decision_engine.conf as shipped in RPM is wrong format (de0aef3)
- 275 : Running de-client –stop-channel <channel> results in KeyError (59fb44e)

Full list of commits since version 1.6.0

d7ccd8a: doc: fix typo

ac48e50: updated release notes

de0aef3: Fix name to match expectations (#305)

59fb44e : postgresql: do not print stack trace for low level library (#309) (#310)

2162bbe: Setuptools uses entry return value as an error msg (#308)

b0fd9fb: 1.6.0 package backports (#302)

1.1.3 Release 1.6.0

In this release:

- The logic engine has been rewritten in pure python. This removes the last C++ dependency the decision engine had. The build system has been updated accordingly.
- Migrated to setuptools package development library. This build system is the standard vanilla python build system
 provided with the python distribution. Build configurations have been updated and rpm packaging remains the
 primary distribution method.
- Completed logging implementation.
- Improvements in error handling and code coverage.
- Improvements in Jenkins and GitHub actions CI/CD pipelines.

Issues fixed in this release

- 44 : Logic Engine doesn't handle missing values gracefully (743effc)
- 253: Decision engine can sometimes start up at boot time before network name resolution is working (ae04db5)

1.1. Release Notes 5

Full list of commits since version 1.5.0

```
2551e07: More coverage for de-client (#296)
dde3945: Make sure actions either complete in time or die (#295)
381861c: Update Jenkins pipeline configuration (#292)
eb771f4: Try to cleanup Dockerfile PATH issue (#291)
780cb56: fix unittest doc
8680942: update unittest documentation
8154b24 : Fixup sphinx doc (#290)
5f7e13a: enhancements in logging and error handling in dataspace dir (#283)
3d92725 : Add missing runtime requirement (#286)
743effc: Allow conversion from errors to false values in logic-engine expressions. (#284)
124dcab: Inherit version from setuptools scm if possible (#287)
3669803: added missing "" as line continuation
761f1d9 : Drop invalid init.py
dc0e71b: migrate to setuptools (#264)
3b6f1bf: Make reaper reset state when starting from stopped proc (#280)
b2f9061: added ISO-8601 format to time in logging. changed name of function for better clarity. (#279)
0a74fe1: Improved DE client usage (#281)
ebf53e3: Added shutdown method to Publisher class (#278)
f95ab6d: Address some flake8/black reports (#274)
1c383b7: Automatically pull in our settings from about.py (#273)
e71f186: logging and error handling enhancements to taskmanager directory (#277)
7de9ab9: Increase Reaper log verbosity (#267)
019d245: Update actions to follow new best practices (#272)
b84e847 : Avoid possible sync issues in reaper startup (#271)
891975f: Remove vestigial C++ files. (#270)
42e5e1f: enhancements in logging and exception handling in newly added logicengine files (#265)
38effe6: Ensure the scheduler has started the thread before returning (#269)
db54fa1 : Start testing on PyPy with psycopg2cffi (#223)
cc44058 : Squashed commit of the following: (#263)
d6548e9: Enhanced logging in the logicengine directory files (#261)
c341bf7: Better match our workflow with codecov (#260)
1fbe44d: Use 'new' syntax for forward compat (#259)
2294b0b : Do a limited pin on version requirements (#256)
bcda470: Python implementation of logic engine (#246)
c6721b4: address comment on RB
```

ae04db5: Add Wants and After (network-online.target) dependency

1a96b14: Fix action repodata

a70cee8: Move to CodeCov.io

7b16b4e: Add Wants and Requires dependencies (#258)

76c3670: Move to CodeCov.io (#254)

e7ba013: Fix action repodata (#255)

d7e72f2: revert 3.9 test

b04154b: added 1.5.0 release notes

a03da29: remove 3.9 to see if documentatoin gets generated

1.1.4 Release 1.5.0

In this release:

- · Introduce data product query interface
- Cleanup of Ligic Engine code
- · Improvements in error handling
- Improvements in testing and CI

Issues fixed in this release

- 217, 218: Add option to de-client –print-product to only print the column names in a data block and-or to print one or more records in key/value format (fe7abcf)
- 240 : Logic Engine call leads to immediate taskmanager segfault exit (d855aa0)
- 239: implement data product browsing interface (fe9faa9)

Full list of commits since version 1.4.1

d66c54b: Add PEP-0396 metadata (#243)

bfc91a6: More compat between psycopg2/psycopg2cffi (#248)

f5d31a6 : Cleanup Fixture FIXME (#249)

Odfaf3c: Adding docker documentation (#251)

4b166a2 : Since we are python3 only now, drop python-six compat layer (#252)

fe7abcf: Add format support to de-client (#217) (#241)

df5a3d7: Add wheel support for easier testing (#247)

7de970d: Add place to inject env if need be (#242)

84e2930 : Fix race in test case (#250)

d855aa0: Fix fact-lookup to support duplicate names in separate rules. (#245)

51370fb: Resolve fixture 'quickstart' issue (#238)

3ea9129: Move from TravisCI to raw actions (#235)

1.1. Release Notes 7

```
fe9faa9: implement data product browsing interface (#239)
cf0f3c0 : Add support to use custom base docker container to run tests (#234)
d91722f: Compat with psycopg2cffi (#233)
7d15a8c: Test failing source proxy. (#232)
b9a4bbb : Add debug logs for which threads are created #176 (#231)
6e6f4c9: Updated Jenkins configuration documentation (#229)
2d9fd7b: Log if config passed validation #117 (#230)
60c46d3: Self-test needs a real namespace to 'import numpy' in new python eval (#228)
a120077: Test that the doc actually builds during CI (#227)
4b6240a: Extend timeout for coverage combine (#226)
b059696: Update workflow per changes at github (#225)
7a71cac: Use newer compilers/runtimes (#224)
15ffd93: Add header for strict includes (#222)
71b141a: Add special PyPy only requirement (#221)
9dbb932: Move Python C extension to versioned .so file (#220)
ea7ade5: Migrate from boost-python to pybind11 (#215)
e6b2eae: Add python 3.9 to testing matrix (#219)
04c8f9c: Add the option to print columns types on de-client (#216)
8815dc6: Logic-engine cleanups (#211)
086d0d5: fix missing back tick
54cc084: modified release notes
24744cf: Synchronize access to the task managers (#214)
87a7fda: replde dash with underscore
743d0fd: try sphinx rtd theme
18c7909: added 1.4.0 release notes
```

ff3d491: force docker pull when building the docker container to make sure to use an updated base layer (#210)

1.1.5 Release 1.4.1

In this release:

• Bug fixes to 1.4.0 release

Issues fixed in this release

• 213: de-client hangs under certain circumstances in version 1.4 and greater (race condition) (84ecfe2)

Full list of commits since version 1.4.0

```
9799b9a: update release version to 1.4.1
84ecfe2: Synchronize access to the task managers (#214)
751b6b8: Address data races; remove need to sleep in unit tests (#205)
```

1.1.6 Release 1.4.0

In this release:

- Improvements in error handling and client/server interactions
- Added log rotation by time
- Improvements in code coverage

Issues fixed in this release

- 153: Have de-client –print-product return different error message if product does not exist (18a950c)
- 171: yum update on decision engine rpm from python2 to python3 doesn't undo the symlinks (eb85c97)
- 188 : Channel debug info now leaks into startup.log (99d20a5)
- 208: Error when trying to run reaper in version 1.4.0 (84eccf3)

Full list of commits since version 1.3

```
84eccf3: Fix typo in reaper script. (#209)
d836abf: next RC
926944a: Fix coveralls reporting (#198)
b95c323: Updating base Dockerfile (#199)
d302e31: Help jsonnet, which doesn't understand PosixPath objects. (#204)
2d791a7: Test configuration policies. (#197)
236e27a: Ensure items are returned in a stable order (#202)
e974f5f: add pylinit and pycodestyle (#203)
fbe7616: Test task manager (#196)
686ca80: require more recent version of pytest-postgresql (#195)
99d20a5: Fix double-logging problem. (#192)
4ce3d17: A set of fixtures to simplify unit tests (#183)
65f8052: Fix typo (#190)
f3a4be8: Protect against None workers (#187)
```

1.1. Release Notes 9

```
ec310fb: remove py3 from package name
7006489 : bump version to 1.4.0rc
158d835 : decisionengine/framework/modules: Fix SourceProxy retries (#184)
1356bf1 : Add support to test any branch in Jenkins (#182)
692fa8e : Add timeout support for unit test on Jenkins (#181)
e3d6e6a: Updated Jenkins documentation to take into account unit tests timeout parametr (#180)
2586a3e : Configuration redesign (#168)
fac984d: Fix error with DBUtils import. Looks like names of modules changed (#175)
7d661ee: Move postgres-specific implementation to postgres source. (#174)
eb85c97 : Rpm (#173)
10fe843: Adding log rotation by time (#170)
a8d239b: Various improvements. (#167)
d9b92ee: Ignore vim's *.swp files (#166)
d9f72ef: Fix call to shutdown_timeout (and add sample entry to config) (#165)
3161795 : Add drops for items using tables being dropped (#164)
77d186d: Show output of test runtimes in travis (#163)
81820a4: Allow server to start with no channels. (#161)
49879a6 : DE server and client usability improvements (#160)
de91c4f: Add tests to default and override config (#158)
14df1f6: Use python fallthrough for options (#159)
ac64a92: Drop python 2.7 integration tests since we are python3 only (#157)
d963301: Update Jenkins pipeline to properly test closing PR (#156)
64248cb: Merge 'runtime' tests into running channel tests (#150)
065ad77: Adding Jenkins pipeline documentation (#155)
18a950c: fix print-product to report non-existing product as such (#154)
6493735 : Fix invalid attribute name (#152)
d953c6a: Remove unnecessary set_start_method call (#149)
c8c9b65: guarantee that process is killed so test never hang (#147)
f1542b6 : Channel test (#146)
7f349a8 : Fix faulty TaskManager state type (#145)
d50f1c4: fix logging regression introduced in f5e299969e0611e3480e9fa2782052df... (#142)
becfa26: Pass the correct type. (#144)
1a60daf: DecisionEngine: fix typo (#143)
9e7b867: Updating Jenkins pipeline configuration (#140)
e3a6703: fix regression introduced in f5e299969e0611e3480e9fa2782052df86d7c4ed (#141)
4900bc6: Restore runtime test. (#139)
```

```
0823f3d : Consolidate DE server/client tests into one file. (#138)
```

4f84435 : A few more access fixes.

160cfd1: Fix task manager state access.

c00d819: A few more cleanups.

ec087e2: Various cleanups

a309ffe: Improvements to DE client CLI.

1.1.7 Release 1.3.0

In this release:

- · Introduced Jsonnet based configuration system
- · Improved logging
- Improved coverage of datasource

Full list of commits since version 1.2

```
239e82c : postgresql: improve SQL query (#133)
668eb1f: Update to make the code compatible with both python and JSON based config files (#129)
afd8837: Configuration-manager fixes (#128)
571e2be: Remove pip installed system python packages
407d9ed: Update Dockerfile
1fefc69: Implement unit tests for datablock.py (#122)
43c8d7a: Adjust global configuration to include program-option values. (#126)
2840813 : Switch to Jsonnet configuration system (#125)
5c4ae0e: logging changes: added config file and command line interface (#124)
6697f22: Further config-manager testing and factorizations. (#123)
fa89fd0: Insulate multiprocessing test from parent environment. (#120)
139a537 : Allow empty base directory for log file. (#119)
f14d40c: Factorize configuration-loading steps. (#118)
e00afee : Enhance testing and error reporting of ConfigManager (#117)
c3d1be3: Python 3 upgrades. (#116)
e7399af: Header fix (#114)
0456abf: Adding editor config file, see https://editorconfig.org/ (#115)
82112d1: Dockerfile: fetch osg 3.5 repo rpm (#113)
97c21b1 : osg version 3.5 (#112)
33f28a8: Introduce jsonnet dependency (#110)
3f8b55e: improve server error handling (#108)
f15588e: added 1.2.0 release notes
```

1.1. Release Notes 11

b433325: Remove unnecessary 'main' functionality. (#107)

1.1.8 Release 1.2.0

In this release:

- Swithed to python3
- · Improved coverage
- · Database data retention: added reaper to remove data older than configurable number of days
- · Improved logging

decisionengine

```
3dfe167: Jenkins pipeline improvements (#106)
22a7073: pull request for review request 137 (#105)
cafffb2: Make it possible to run code directly (for tests), and (#100)
802e98b: replace psycog2 witt psycopg2-binary (#101)
573ce8f: Jenkins pipeline improvements (#99)
9d08835 : Run coveralls even under failed state (#97)
bc1df4b: Add tests for PostgreSQL datasource (#71)
c1ac391 : Fix missing py-modules.html (#96)
8dbfdee: Setup gh-pages doc workflow (#94)
cd4a01a: Doc (#93)
673080d: set version to 1.2.0 (for now). Supply conf file that corresponds to (#91)
f912225: Db (#92)
dc8b68a: Add reaper to the RPC (#83) (#90)
29ade91: adding .Jenkinsfile with Jenkins pipeline configuration (#86)
c1dfe5c: Don't exclude E1004 from pylint, do exclude line breaks (#89)
440f949 : Fix varname (#88)
313d135 : Compress (#87)
6b8dc4b: Revert "Add reaper to the RPC (#83)"
dbea8e5: Update utils.sh so pytest will complete.
e848316: Update to postgresql11
7f4b805: Add reaper to the RPC (#83)
0ba2c51: remove astpp module and depedencies it pulls in (#81)
6b8eab9: don't track test coverage of tests (#80)
0da18ec: made reaper.py executable
aca24a3: make reaper.py executable, make symbolic link to it from /usr/bin (#72)
0202acf: Implementation of data reaper (#70)
```

```
16b6be1: Simple changes for Python 3 deployment (#69)
fd2418c: Fix warnings caught by PEP-8 Speaks.
d16359b: Python 3 (and other) simplications.
3c7b6b7 : Only run Github Actions for python3.6 (#68)
453cbba: Update README.md
b27ed53: remove unnecessary (and atually harmful) python shebang (#66)
decisionengine modules
30d928b: clone version 1.2.0 of decisionengine
ae7c5a6: Jenkins pipeline improvements (#236)
310befd: T198 (#235)
a65886d: Fix import as reported in: https://github.com/HEPCloud/decisionengin... (#232)
93711cc: Run coveralls even if tests fail (#229)
03d763a: Jenkins pipeline improvements (#230)
f48d30f : Fix/223 (#228)
c8aa262 : github ticket 199 (#222)
0323bda: Address: https://github.com/HEPCloud/decisionengine_modules/issues/224 (#226)
62e4df6: Add support to run CI on Jenkins (#221)
5ab1541 : bump master version to 1.2.0 (for now) (#219)
bc19c65: decisionengine_modules/NERSC: Added retry loop for NERSC API Calls (#220)
41a50de : Sync up pep8speaks and run_pylint.sh with decisionengine settings (#218)
db4634f : silence pylint error (#217)
1b95141: Fix whitespace around operator error
746ea38: ignore W503
8a8b5f4: remove unused variable
a6668bf: fix PEP8 warnings
13773ee: address pep8 warnings
6bea4ca: silence pylint error
f589895 : Pass sort=True parameter to fix future warning (#215)
a1d0507: fixing pep8 warning
a10bd17: debugging one import error
ec501ad: make coveralls.io links work
deab1a7: T201 (#204)
69f2645 : Add coveragerc
6d8a5f5: decisionengine_modules/NERSC: Make Nersc API call backward-compatible with old config (#196)
a7e0af9: Only run Github Actions for python3.6 (#24)
```

1.1. Release Notes 13

1.1.9 Release 1.1.0

In this release:

- Fixed. https://github.com/HEPCloud/decisionengine_modules/issues/108 "Supply Postgres script to delete fields in main database before a certain date"
- significant code cleanup and pep8 compliance
- · unit test work
- CI (GitHub actions and Travis) is introduced

commits

f894b1d: Skip unittest (#77)

632e64b: Add ipython

f681a79: Make python 2.7 tests run on 1.1 branch

d6a32c0: implementation of data reaper (#75)

2ad8614: Use sparse checkout for first checkout to get .github/actions (#65)

812f032: Cat output of pytest log Exit pylint entrypoint with the line count of pep8 and pylint logs Deal with (detach

from ...) Only tar up (S)RPMS dirs for rpm build.

6b05ec7: Fix errors reported by run_pylint (#62)

d9f5b66 : Setup pep8speaks

c3b8ac2: Run github actions as non-root uid. Install packages in virtualenv and remove system rpms.

ae01f9e: Support Python 3 for Boost Python

579761c: Support Python 3 for Boost Python

044b979 : Remove unnecessary using declarations.

00f6d00: Add extra header dependency due to Boost Python ommission.

24e0795 : Apply clang-format

17c17f9: Remove JSON dependency.

faa0b22 : Massive cleanup.

07b555f: Updates to Github Actions to allow building with python3.6

fef6c11: Fix errors when running pylint.sh multiple times

da6f077: Autopep8 -i fixes

39fe5b3: TaskManager: fix calling log_exception with correct number of arguments and minor format changes to

reduce PEP8 warnings

17396da: logicengine: get rid of compuler warnings

01dc3d1: Only track what we need

b609d73: Configure coveralls (and some minor cleanup)

bd9ed5e: Many C++ cleanups

2a61876: Add Badges

c864f27: Do not call pytest fixtures directly.

307db5f: white space fix

```
882b58f: fix unit tests
1da687c: Replace Boost facilities with C++ STL ones.
5a6e6b1: Run tests on push
8404245 : Add missing Boost regex library dependency.
ceb5fe7: Apply clang-format to files that were missed earlier.
3de9940 : Apply clang-format to C++ code.
8a8f560: Cache venv directory instead
ad017ce: Build private boost for testing
928c64a: Test pip cache
358939a: Adjust CMakeLists.txt files to use correct Python versions
9f0ddb3: Add pylint github action.
5e6ce4a: Remove more unused C++ files.
63717fe: Setup travis to use new cmake var
74fab2a: Use cmake argumement -DPYVER=3.6 to build python3 library https://fermicloud140.fnal.gov/reviews/r/
31/
843f30c: Minor cleanups per travis-lint
a538cac: Remove unused C++ files.
4c9d125: Update repo where action is taken from
87fb2d9: Update rpms installed in docker image. Update entrypoint.sh to use cmake3.
199ee87: Find python3 libraries using cmake3 from epel rpm Also need to install python3-devel
4c79d2c: Remove unnused GNUmakefiles.
94342ee: Add unit test as a Github Action
1a0e102: more advanced travis.yml
0be413f: Add helper file for pip
7794327: Make recursive import happy
7005c78: Add simple target
de8b0fa: python3 compliance: replace string.join() where appropriate, handle UserDict
2662e6c: note required packages
3b87119: Add missing header includes.
3e79b84: Remove defunct code and its tests
b1dbe1a: Ensure attribs are defined at init
```

1.1. Release Notes

c4ad78a: Correct logger arguments do avoid duplicate string parse

a8dcc67: Remove unused imports (per pylint) d3502b5: Remove obsolete CVS directories.

0a9b1e8: Fix class declaration

d744111: add six module to the list of required modules

decisionengine, Release 1.6.99.post8

b83157e: Handle metaclasses

549f33b : Add config for Travis CI ee71044 : Drop trailing white space

3f82af6: Python3 forward compatible syntax

28bf291 : Add safe (for python 2.7) python3 compatible syntax

1d1d76f : prepare for python3

THREE

JENKINS CI PIPELINE

3.1 Decisionengine CI with Jenkins pipeline

Jenkins dashboard with Decisionengine framework CI results is available here.

A CI build is triggered any time a PR is created/closed or a commit is made to an existing PR. There are also *nightly CI builds* to test a list of predefined branches.

The Jenkins pipeline runs *pylint* and *unit_tests* test suites alongside the *rpmbuild* stage.

The Jenkins dashboard looks like this:

On the bottom left side there is the list of recent CI builds that are named after the PR or the branch tested. On the bottom right side the dashboard shows for each CI build detailed status for each test suite.

Hovering the mouse over the status box for each CI build stage, a tool-tip with a button to access log details shows up.

Next to the build number the symbol ¹ gives access to a menu with the list of artifacts stored for that build. Those artifacts include logs and the tarball with RPMs.

From the panel on the left side it is possible to access the PR on GitHub by clicking on the PR icon that looks like this 1.4142.

On occasion it could be useful to trigger a manual CI build to test a branch on the official DE GitHub repository or on

the user fork. For this purpose, on the top left panel the user can click on the Build with Parameters button, and this panel shows up

Pipeline decisionengine_pipeline

This build requires parameters:

the user can modify these parameters to customize what code to test with the CI build.

The *DE_REPO* parameter can point to the user fork or to the main repository.

The BRANCH parameter can point to the desired branch to test.

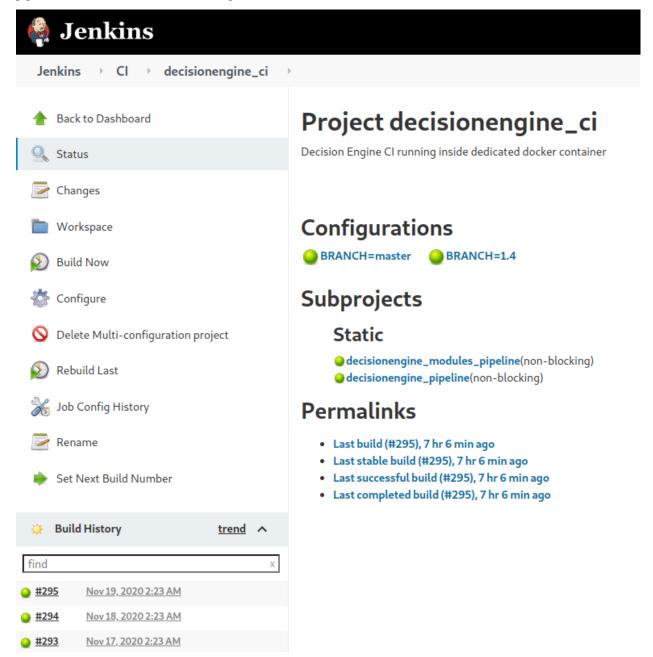

The PYTEST_TIMEOUT parameter is the timeout in seconds for unit_tests.

When ready, by clicking on the Build button, the CI build will start.

The pipeline configuration is part of the decisionengine repo.

3.1.1 Nightly CI build configuration

The nightly CI build for Decisionengine framework uses this Jenkins project that triggers a CI build using the Jenkins pipeline described above to test a list of predefined branches.

Branches to test are defined using the project matrix as shown in the picture below. Each branch in the list (here *master* and *1.4*) spawns an independent CI build.

In the *Build* section of the configuration it is set the list of Jenkins subprojects to be triggered, in this case we have *decisionengine_pipeline* and *decisionengine_modules_pipeline*.

The *Parameters* text box is used to override parameters of each Jenkins subproject with a custom value. In total this Jenkins project triggers 4 CI builds, i.e. 2 branches X 2 Jenkins subprojects.

Finally the *Build Triggers* section is used to setup the schedule for the periodic build, in this case it is scheduled to run at about 2 AM.

Jenkins will choose the actual time depending on the actual load on the system.

```

Module contents

Submodules

decisionengine.framework.config.ChannelConfigHandler module

Manager of channel configurations.

The ChannelConfigHandler manages only channel configurations and not the global decision-engine configuration. It is responsible for loading channel configuration files and validating that the channels have the correct configuration artifacts and inter-module product dependencies.

Bases: object

_load_channel(channel_name, path)

get_channels()

load_all_channels()

Load all channel configurations inside the stored channel-configuration directory.

Any cached configurations will be dropped prior to reloading.

load_channel(channel name)

Load a single configuration for a channel with the supplied name.

The behavior is to read a configuration file whose path is:

<cached channel config. dir>/{channel_name}.jsonnet

where the cached channel-configuration directory was stored whenever the ChannelConfigHandler object was created, and {channel_name} is the value of the supplied method argument.

```
print_channel_config(channel)
```

decisionengine.framework.config.ChannelConfigHandler._check_keys(channel_conf_dict) check that channel config has mandatory keys:type data: dict

decisionengine.framework.config.ChannelConfigHandler._make_de_logger(global_config)

decisionengine.framework.config.ValidConfig module

ValidConfig represents a valid JSON document.

The decision engine requires each of its configuration files to be valid JSON. This is achieved by either supplying a valid Jsonnet or JSON document upfront, or by providing a Python dictionary that can be trivially converted to a JSON document.

Vetting of a file for JSON validity happens upon construction of a 'ValidConfig' object. A fully constructed 'Valid-Config' object thus corresponds to a valid JSON document.

class decisionengine.framework.config.ValidConfig(filename)

Bases: collections.UserDict

ValidConfig represents a valid JSON configuration in the form of a dictionary.

In addition to the normal dictionary operations, users may call 'dump()' to print out in a string form the JSON configuration.

```
_abc_impl = <_abc._abc_data object>
dump()
```

Print dictionary data to a valid JSON string.

decisionengine.framework.config.ValidConfig._config_from_file(config_file)

decisionengine.framework.config.ValidConfig._convert_to_json(config_file)

Attempt to convert JSON non-compliant configuration into a compliant one.

This is a temporary facility to aid the migration of Python-based configurations to Jsonnet-based ones. Python dictionaries that are similar in structure to JSON documents are generally trivially convertible.

decisionengine.framework.config.policies module

Decision-engine default configuration policies.

For the decision-engine process, the configuration policies are:

- The global configuration file must be named 'decision_engine.jsonnet' and it must reside in (a) a directory that can be accessed through the 'CONFIG_PATH' environment variable, or (b) the /etc/decisionengine directory.
- All channel configurations must reside in (a) a directory accessible through the 'CHANNEL_CONFIG_PATH' environment variable, or (b) a 'config.d' subdirectory of the /etc/decisionengine directory.

The utilities provided in this module provide simple means of accessing the configuration artifacts according to the policies listed above. Please consult the documentation for each function below for more detailed information.

```
decisionengine.framework.config.policies.channel_config_dir(parent_dir=None)

Retrieve the channel configuration directory as a pathlib.Path object.
```

This function returns a path object according to the following precedence rules:

- 1. If the 'parent_dir' argument is provided, the returned path object will correspond to '{parent_dir}/config.d'.
- 2. If the 'CHANNEL_CONFIG_PATH' environment variable has been set, the returned path object will correspond to \${CHANNEL_CONFIG_PATH}.
- 3. If neither 1 or 2 apply, the returned path object corresponds to '{global_config_dir()}/config.d' (see documentation for 'global_config_dir()').

Regardless of the precedence rule used, the returned path object must be a valid directory or an exception will be raised—i.e. if the 'parent_dir' argument is supplied, and the resulting path object is not a valid directory, the function will exit with an exception and not attempt rule 2 or 3.

```
decisionengine.framework.config.policies.global_config_dir()
```

Retrieve global configuration dir as pathlib.Path object.

This is the directory that houses the 'decision_engine.jsonnet' global configuration file.

This function checks that the 'CONFIG_PATH' variable has been set or will use /etc/decisionengine otherwise. If the path exists as a directory, then the directory path is returned as a string; otherwise an exception is raised.

```
decisionengine.framework.config.policies.global_config_file(parent_dir=None)
```

Return the pathlib.Path object corresponding to the global configuration.

If supplied, the 'parent_dir' is assumed to be the full path corresponding to a directory containing the 'decision_engine.jsonnet' file. If not provided, the global configuration directory is determined based on the behavior of the 'global_config_dir()' function.

An exception is raised if no 'decision_engine.jsonnet' file is found.

```
decisionengine.framework.config.policies.valid_dir(path, scope)

Throws if the supplied path object is not a directory, otherwise returns the path object.
```

Module contents

decisionengine.framework.dataspace package

Subpackages

decisionengine.framework.dataspace.datasources package

Subpackages

decisionengine.framework.dataspace.datasources.sqlalchemy ds package

Submodules

decisionengine.framework.dataspace.datasources.sqlalchemy_ds.datasource_api module

The datasource layer for our abstraction

```
class decisionengine.framework.dataspace.datasources.sqlalchemy_ds.datasource_api.SQLAlchemyDS(config_dice
     Bases: decisionengine.framework.dataspace.datasource.DataSource
     A DecisionEngine data source via the SQL Alchemy ORM
          "dataspace": {
              "datasource": { "module":
                                            "decisionengine.framework.dataspace.datasources.sqlalchemy_ds",
                  "name": "SQLAlchemyDS", "params": {
                    "pool_size": 5, "max_overflow": 10, "timeout": 30,
                    # url is mandatory, but any engine keyword is accepted here.
                                                                                         "url": "di-
                    alect[+driver]://user:password@host/dbname"
          }
     }
     Exceptions should be caught and logged by the caller.
     _abc_impl = <_abc._abc_data object>
     close()
          Close all connections to the database
              Returns None
     connect()
          Create a pool of database connections
```

Returns None

create_tables()

Create database tables

Returns None

delete_data_older_than(days)

Delete data older that interval

Parameters days (int) – remove data older than this many days

Returns None

duplicate_datablock(taskmanager_id, generation_id, new_generation_id)

For the given taskmanager_id, make a copy of the datablock with given generation_id, set the generation_id for the datablock copy

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to clone
- **new_generation_id** (int) generation id to create

Returns None

get_datablock(taskmanager_id, generation_id)

Return the entire datablock from the dataproduct table for the given taskmanager_id, generation_id

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to locate

Returns with all set keys and their associated values

Return type dict

get_dataproduct(taskmanager_id, generation_id, key)

Return the data from the dataproduct table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to locate
- **key** (*str*) key for the value

Returns The possibly binary value stored earlier

Return type obj

get_dataproducts(taskmanager_id, key=None)

Return list of all data products associated with with taskmanager_id

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **key** (str) key for the value

Returns each element is the matching row as a dict()

Return type tuple

get_header(taskmanager_id, generation_id, key)

Return the header from the header table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to locate
- **key** (*str*) key for the value

Returns

fields in order are: taskmanager.taskmanager_id, header.taskmanager_id, header.generation_id, header.key, header.create_time, header.scheduled_create_time, header.creator, header.schema_id header.expiration_time,

Return type tuple

get_last_generation_id(taskmanager_name, taskmanager_id=None)

Return last generation id for current task manager or taskmanager w/ task_manager_id.

Parameters

- $taskmanager_name (str)$ name of taskmanager to retrieve
- taskmanager_id (str/uuid) id of taskmanager to retrieve

Returns the largest generation stored within the database

Return type int

get_metadata(taskmanager_id, generation_id, key)

Return the metadata from the metadata table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to locate
- \mathbf{key} (\mathbf{str}) key for the value

Returns

fields in order are: taskmanager.taskmanager_id, metadata.taskmanager_id, metadata.generation_id, metadata.key, metadata.state, metadata.generation_time, metadata.missed_update_count

Return type tuple

get_schema(table=None)

Given the table name return it's schema

get_taskmanager (taskmanager name, taskmanager id=None)

Find the task manager by name/uuid in the database get back the primary key.

If multiples match, find highest primary key.

Parameters

- taskmanager_name (str) name of taskmanager to retrieve
- taskmanager_id (str/uuid) id of taskmanager to retrieve

Returns the matching row, column names as keys

Return type dict

get_taskmanagers(taskmanager_name=None, start_time=None, end_time=None)

Find taskmanagers that meet our search

Parameters

- $taskmanager_name(str)$ name of taskmanager to retrieve
- **start_time** (*datetime*) Datetime to confine against
- end_time (datetime) Datetime to confine against

Returns each element is a dict() matching row, column names as keys

Return type list

insert(taskmanager_id, generation_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to create
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

Returns None

reset_connections()

Reset the connection to the database. So long as self.engine isn't undef, the engine can still make new connections if new db actions happen. It just wont have any open at this time.

Returns None

store_taskmanager(name, taskmanager_id, datestamp=None)

Store TaskManager in database

Parameters

- name (str) name of taskmanager to retrieve
- taskmanager_id (str/uuid) id of taskmanager to retrieve
- datestamp (datetime) datetime of created object, defaults to 'now'

Returns the primary key of the row in the database

Return type int

update(taskmanager id, generation id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (int) generation id to update
- **key** (str) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

Returns None

decisionengine.framework.dataspace.datasources.sglalchemy ds.db schema module

The table layout and utilities for our SOLAlchemy ORM class decisionengine.framework.dataspace.datasources.sqlalchemy_ds.db_schema.Base(**kwargs) Bases: object The base class of the class hierarchy. When called, it accepts no arguments and returns a new featureless instance that has no instance attributes and cannot be given any. _sa_registry = <sqlalchemy.orm.decl_api.registry object> metadata = MetaData() registry = <sqlalchemy.orm.decl_api.registry object> class decisionengine.framework.dataspace.datasources.sqlalchemy_ds.db_schema.Dataproduct(**kwargs) Bases: sqlalchemy.orm.decl_api.Base The PRIMARY KEY on this table isn't used.... ```

Module contents

```
Top level import so we can rationally segment items of the ORM
```

```
class decisionengine.framework.dataspace.datasources.sqlalchemy_ds.SQLAlchemyDS(config_dict)
     Bases: decisionengine.framework.dataspace.datasource.DataSource
     A DecisionEngine data source via the SQL Alchemy ORM
          "dataspace": {
              "datasource": { "module":
                                             "decisionengine.framework.dataspace.datasources.sqlalchemy_ds",
                  "name": "SQLAlchemyDS", "params": {
                    "pool size": 5, "max overflow": 10, "timeout": 30,
                    # url is mandatory, but any engine keyword is accepted here.
                                                                                           "url":
                                                                                                    "di-
                    alect[+driver]://user:password@host/dbname"
                  }
              }
          }
     Exceptions should be caught and logged by the caller.
     _abc_impl = <_abc._abc_data object>
          Close all connections to the database
              Returns None
     connect()
          Create a pool of database connections
              Returns None
     create_tables()
          Create database tables
              Returns None
     delete_data_older_than(days)
          Delete data older that interval
              Parameters days (int) – remove data older than this many days
              Returns None
     duplicate_datablock(taskmanager_id, generation_id, new_generation_id)
          For the given taskmanager_id, make a copy of the datablock with given generation_id, set the generation_id
          for the datablock copy
              Parameters
                   • taskmanager_id (str/uuid) – id of taskmanager to retrieve
                   • generation_id (int) – generation id to clone
                   • new_generation_id (int) - generation id to create
              Returns None
```

get_datablock(taskmanager id, generation id)

Return the entire datablock from the dataproduct table for the given taskmanager_id, generation_id

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to locate

Returns with all set keys and their associated values

Return type dict

get_dataproduct(taskmanager_id, generation_id, key)

Return the data from the dataproduct table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to locate
- \mathbf{key} (\mathbf{str}) key for the value

Returns The possibly binary value stored earlier

Return type obj

get_dataproducts(taskmanager_id, key=None)

Return list of all data products associated with with taskmanager_id

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **key** (*str*) key for the value

Returns each element is the matching row as a dict()

Return type tuple

get_header(taskmanager_id, generation_id, key)

Return the header from the header table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- $generation_id(int)$ generation id to locate
- **key** (*str*) key for the value

Returns

```
fields in order are: taskmanager.taskmanager_id, header.taskmanager_id, header.generation_id, header.key, header.create_time, header.scheduled_create_time, header.creator, header.schema_id header.expiration_time,
```

Return type tuple

get_last_generation_id(taskmanager_name, taskmanager_id=None)

Return last generation id for current task manager or taskmanager w/ task_manager_id.

- $taskmanager_name (str)$ name of taskmanager to retrieve
- taskmanager_id (str/uuid) id of taskmanager to retrieve

Returns the largest generation stored within the database

Return type int

get_metadata(taskmanager_id, generation_id, key)

Return the metadata from the metadata table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (int) generation id to locate
- **key** (*str*) key for the value

Returns

fields in order are: taskmanager.taskmanager_id, metadata.taskmanager_id, metadata.generation_id, metadata.key, metadata.state, metadata.generation_time, metadata.missed_update_count

Return type tuple

get_schema(table=None)

Given the table name return it's schema

get_taskmanager_id=None)

Find the task manager by name/uuid in the database get back the primary key.

If multiples match, find highest primary key.

Parameters

- **taskmanager_name** (*str*) name of taskmanager to retrieve
- taskmanager_id (str/uuid) id of taskmanager to retrieve

Returns the matching row, column names as keys

Return type dict

get_taskmanagers(taskmanager_name=None, start_time=None, end_time=None)

Find taskmanagers that meet our search

Parameters

- taskmanager_name (str) name of taskmanager to retrieve
- **start_time** (*datetime*) Datetime to confine against
- end_time (datetime) Datetime to confine against

Returns each element is a dict() matching row, column names as keys

Return type list

insert(taskmanager_id, generation_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager_id, generation_id, key

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (*int*) generation id to create
- \mathbf{key} (str) key for the value
- value (obj) Value can be an object or dict or a binary

- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

Returns None

reset_connections()

Reset the connection to the database. So long as self.engine isn't undef, the engine can still make new connections if new db actions happen. It just wont have any open at this time.

Returns None

store_taskmanager(name, taskmanager_id, datestamp=None)

Store TaskManager in database

Parameters

- name (str) name of taskmanager to retrieve
- taskmanager_id (str/uuid) id of taskmanager to retrieve
- datestamp (datetime) datetime of created object, defaults to 'now'

Returns the primary key of the row in the database

Return type int

update(taskmanager_id, generation_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (str/uuid) id of taskmanager to retrieve
- **generation_id** (int) generation id to update
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

Returns None

decisionengine.framework.dataspace.datasources.tests package

Submodules

decisionengine.framework.dataspace.datasources.tests.fixtures module

pytest fixtures/constants

decisionengine.framework.dataspace.datasources.tests.fixtures.PG_DB_WITHOUT_SCHEMA(request:

_pytest.fixtures.Fixture

 \rightarrow

psycopg2.extensions.c

Fixture factory for PostgreSQL.

Parameters request - fixture request object

Returns postgresql client

decisionengine.framework.dataspace.datasources.tests.fixtures.**PG_DE_DB_WITH_SCHEMA**(*PG_DE_DB_WITHOUT_*. Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

decisionengine.framework.dataspace.datasources.tests.fixtures.PG_PROG(request:

_pytest.fixtures.FixtureRequest, tmpdir_factory: _pytest.tmpdir.TempdirFactory) →

Iterator[pytest_postgresql.executor.PostgreS

 \rightarrow

Process fixture for PostgreSQL.

Parameters request – fixture request object

Returns tcp executor

- decisionengine.framework.dataspace.datasources.tests.fixtures.**SQLALCHEMY_PG_WITH_SCHEMA**(*PG_DE_DB_WITH* Get a blank database from pytest_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.
- decisionengine.framework.dataspace.datasources.tests.fixtures.SQLALCHEMY_TEMPFILE_SQLITE(tmp_path) Setup an SQLite database with the pytest tmp_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.
- decisionengine.framework.dataspace.datasources.tests.fixtures.datasource(request)
 This parameterized fixture will setup up various datasources.

Add datasource objects to DATASOURCES_TO_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.datasources.tests.fixtures.mock_data_block()
This fixture replaces the standard datablock implementation.

The current DataBlock implementation does not own any data products but forwards them immediately to a backend datasource. The only implemented datasource requires Postgres, which is overkill when needing to test simple data-product communication between modules.

This mock datablock class directly owns the data products, thus avoiding the need for a datasource backend. It is anticipated that a future design of the DataBlock will own the data products, thus making this mock class unnecessary.

decisionengine.framework.dataspace.datasources.tests.test datasource api module

This test plan covers a generic dataspace object via pytest parameters.

- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_create_tables(datasource) create_tables() should be safe to call multiple times
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_delete_data_older_than_ar Can we delete old entries
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_duplicate_datablock(dataso Can we duplicate taskmanager1 and all its entries
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_datablock(datasource)
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_dataproduct(datasource)

 Can we get the dataproduct by uuid with key

- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_dataproduct_not_exist Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_dataproducts(datasource Can we get the dataproducts by uuid and uuid with key
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_dataproducts_not_exis Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_header(datasource)

 Can we fetch a header?
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_header_not_exist(datas Does it error out if we ask for a bogus header?
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_last_generation_id(dataspace). Can we get the last generation id by name or name and uuid

decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_last_generation_id_no

- Does it error out if we ask for a bogus taskmanager?
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_metadata(datasource)

 Can we fetch a metadata element?
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_metadata_not_exist(datasource Does it error out if we ask for a bogus metadata element?
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_taskmanager_exists(datasource_api test_get_taskmanager_exists).
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_taskmanager_not_exist
 This should error out
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_taskmanagers(datasourceCan I get multimple task managers

decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_get_taskmanagers_not_exis

- Do I error out when asking for garbage
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_has_config(datasource)

 This should have a config dict we can pass to jsonnet
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_insert(datasource)

 Can we insert new elements
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_reset_connections(datasource reset_connections() should be safe to call any time
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_store_taskmanager(datasource_api .test_store_taskmanager(datasource_api .test_store_taskmanager)
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_update(datasource)

 Do updates work as expected
- decisionengine.framework.dataspace.datasources.tests.test_datasource_api.test_update_bad(datasource)

 Do updates fail to work on bogus taskmanager as expected

decisionengine.framework.dataspace.datasources.tests.test postgresql module

decisionengine.framework.dataspace.datasources.tests.test_postgresql.test_generate_insert_query()

Module contents

Submodules

decisionengine.framework.dataspace.datasources.null module

class decisionengine.framework.dataspace.datasources.null.NullDataSource(config_dict)

Bases: decisionengine.framework.dataspace.datasource.DataSource

Implementation of data source ABC that does nothing

```
_abc_impl = <_abc._abc_data object>
```

close()

Close all connections to the database

connect()

Create a pool of database connections

create_tables()

Create database tables

delete_data_older_than(days)

Delete data older that interval :type days: long :arg days: remove data older than interval

duplicate_datablock(taskmanager_id, generation_id, new_generation_id)

For the given taskmanager_id, make a copy of the datablock with given generation_id, set the generation_id for the datablock copy

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- new_generation_id (int) generation_id of the new datablock created

get_datablock(taskmanager_id, generation_id)

Return the entire datablock from the dataproduct table for the given taskmanager id, generation id

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- generation_id (int) generation_id of the data

${\tt get_dataproduct}(\textit{taskmanager_id}, \textit{generation_id}, \textit{key})$

Return the data from the dataproduct table for the given taskmanager_id, generation_id, key

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- generation_id (int) generation_id of the data
- **key** (string) key for the value

get_dataproducts(taskmanager id, key=None)

Return list of all data products associated with with taskmanager_id

Parameters key (string) – data product key

get_header(taskmanager_id, generation_id, key)

Return the header from the header table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value

get_last_generation_id(taskmanager_name, taskmanager_id=None)

Return last generation id for current task manager or taskmanager w/ task_manager_id.

Parameters

- taskmanager_name (string) task manager name
- taskmanager_id (string) task manager id

get_metadata(taskmanager_id, generation_id, key)

Return the metadata from the metadata table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation id of the data
- **key** (string) key for the value

get_schema(table=None)

Given the table name return it's schema

Parameters table (string) – Name of the table

get_taskmanager(taskmanager_name, taskmanager_id=None)

Retrieve TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve

get_taskmanagers(taskmanager_name=None, start_time=None, end_time=None)

Retrieve TaskManagers :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve

insert(taskmanager_id, generation_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager id, generation id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- $generation_id$ (int) $generation_id$ of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

reset_connections()

Drop any cached connections and reconnect to the database

store_taskmanager(name, taskmanager id, datestamp=None)

Store TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve :type datestamp: datetime :arg datestamp: datetime of created object, defaults to 'now'

update(taskmanager_id, generation_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

decisionengine.framework.dataspace.datasources.postgresql module

```
class decisionengine.framework.dataspace.datasources.postgresql.Postgresql(config dict)
     Bases: decisionengine.framework.dataspace.datasource.DataSource
     Implementation of postgresql data source
     __query(query_string, values=None, cursor_factory=None)
     _abc_impl = <_abc._abc_data object>
     _delete(sql_query, values=None)
     _insert(table_name_or_sql_query, record=None)
     _insert_returning_result(table_name_or_sql_query, record=None)
     _remove(sql_query, values=None)
     _select(query string, values=None, cursor factory=None)
     _select_dictresult(sql_query, values=None)
     _select_getresult(sql_query, values=None)
     _select_tuple(sql_query, values)
     _update(query string, values=None)
     _update_returning_result(query string, values=None)
     close()
          Close all connections to the database
     connect()
          Create a pool of database connections
     create_tables()
          Create database tables
     delete_data_older_than(days)
```

Delete data older that days interval :type days: int :arg days: remove data older than days interval

duplicate_datablock(taskmanager_id, generation_id, new_generation_id)

For the given taskmanager_id, make a copy of the datablock with given generation_id, set the generation_id for the datablock copy

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- new_generation_id (int) generation_id of the new datablock created

get_connection()

get_datablock(taskmanager_id, generation_id)

Return the entire datablock from the dataproduct table for the given taskmanager_id, generation_id

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data

get_dataproduct(taskmanager_id, generation_id, key)

Return the data from the dataproduct table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value

get_dataproducts(taskmanager_id, key=None)

Return list of all data products associated with with taskmanager_id

Parameters key (string) - data product key

get_header(taskmanager_id, generation_id, key)

Return the header from the header table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation id of the data
- **key** (string) key for the value

get_last_generation_id(taskmanager_name, taskmanager_id=None)

Return last generation id for current task manager or taskmanager w/ task manager id.

Parameters

- taskmanager_name (string) task manager name
- taskmanager_id (string) task manager id

get_metadata(taskmanager_id, generation_id, key)

Return the metadata from the metadata table for the given taskmanager_id, generation_id, key

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value

```
get_schema(table=None)
```

Given the table name return it's schema

Parameters table (string) – Name of the table

get_taskmanager(taskmanager_name, taskmanager_id=None)

Retrieve TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve

get_taskmanagers(taskmanager name=None, start time=None, end time=None)

Retrieve TaskManagers :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve

insert(taskmanager_id, generation_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

reset_connections()

Drop any cached connections and reconnect to the database

store_taskmanager(name, taskmanager_id, datestamp=None)

Store TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve :type datestamp: datetime :arg datestamp: datetime of created object, defaults to 'now'

```
tables = {'dataproduct': ['taskmanager_id TEXT', 'generation_id INT', 'key TEXT',
'value BLOB'], 'header': ['taskmanager_id TEXT', 'generation_id INT', 'key TEXT',
'create_time REAL', 'expiration_time REAL', 'scheduled_create_time REAL', 'creator
TEXT', 'schema_id INT'], 'metadata': ['taskmanager_id TEXT', 'generation_id INT',
'key TEXT', 'state TEXT', 'generation_time REAL', 'missed_update_count INT'],
'schema': ['schema_id INT', 'schema BLOB']}
```

update(taskmanager_id, generation_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value
- **value** (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

 ${\tt decisionengine.framework.dataspace.datasources.postgresql.} {\tt generate_insert_query} ({\tt table_name}, \\ {\tt keys})$

Generate insert query given table name and list of fields

Parameters

- table_name (str) Name of the table to insert into
- **keys** List of column names

Keys list

Return type str - insert query

Module contents

decisionengine.framework.dataspace.tests package

Submodules

decisionengine.framework.dataspace.tests.fixtures module

decisionengine.framework.dataspace.tests.fixtures.PG_DB_WITHOUT_SCHEMA(request:

_pytest.fixtures.FixtureRequest)

 \rightarrow

psycopg2.extensions.connection

Fixture factory for PostgreSQL.

Parameters request - fixture request object

Returns postgresql client

decisionengine.framework.dataspace.tests.fixtures.**PG_DE_DB_WITH_SCHEMA**(*PG_DE_DB_WITHOUT_SCHEMA*) Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

 $_pytest.tmpdir.TempdirFactory) \rightarrow$

Iterator[pytest_postgresql.executor.PostgreSQLExecutor]

Process fixture for PostgreSQL.

Parameters request - fixture request object

Returns tcp executor

decisionengine.framework.dataspace.tests.fixtures.**SQLALCHEMY_PG_WITH_SCHEMA**(*PG_DE_DB_WITHOUT_SCHEMA*) Get a blank database from pytest_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.dataspace.tests.fixtures.**SQLALCHEMY_TEMPFILE_SQLITE**(*tmp_path*) Setup an SQLite database with the pytest tmp_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.dataspace.tests.fixtures.datasource(request)

This parameterized fixture will setup up various datasources.

Add datasource objects to DATASOURCES_TO_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.tests.fixtures.dataspace(request)

This parameterized fixture will setup up various datasources. Add datasource objects to DATA-SOURCES_TO_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.tests.fixtures.load_sample_data_into_datasource(schema_only_db) load our sample test data into a dataspace This is a function not a fixture so you can run it on any datasource providing the right API.

decisionengine.framework.dataspace.tests.test_Reaper module

```
decisionengine.framework.dataspace.tests.test_Reaper.config()

decisionengine.framework.dataspace.tests.test dataspace module

- decisionengine.framework.dataspace.tests.test_dataspace.test_dataspace_config_finds_bad()
- decisionengine.framework.dataspace.tests.test_dataspace.test_duplicate_datablock(dataspace)

 Can we duplicate taskmanager1 and all its entries
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_datablock(dataspace)

 Can we get the datablock content
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_dataproduct(dataspace)

 Can we get the dataproduct by uuid with key
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_dataproduct_not_exist(dataspace)

 Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_dataproducts(dataspace)

 Can we get the dataproducts by uuid and uuid with key
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_dataproducts_not_exist(dataspace)

 Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_header(dataspace)

 Can we fetch a header?
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_header_not_exist(dataspace)

 Does it error out if we ask for a bogus header?
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_last_generation_id(dataspace)

 Can we get the last generation id by name or name and uuid
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_last_generation_id_not_exist(dataspace)

 Does it error out if we ask for a bogus taskmanager?
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_metadata(dataspace)

 Can we fetch a metadata element?
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_metadata_not_exist(dataspace)

 Does it error out if we ask for a bogus metadata element?
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_taskmanager_exists(dataspace)

 Can I get a taskmanager by name or name and uuid
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_taskmanager_not_exists(dataspace)
 This should error out
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_taskmanagers(dataspace)

 Can I get multimple task managers
- decisionengine.framework.dataspace.tests.test_dataspace.test_get_taskmanagers_not_exist(dataspace)

 Do I error out when asking for garbage
- decisionengine.framework.dataspace.tests.test_dataspace.test_has_config(dataspace) verify our config entry exists
- decisionengine.framework.dataspace.tests.test_dataspace.test_insert(dataspace)

 Can we insert new elements
- decisionengine.framework.dataspace.tests.test_dataspace.test_store_taskmanager(dataspace)

 Can we make new entries

decisionengine.framework.dataspace.tests.test_dataspace.test_update_bad(dataspace)

Do updates fail to work on bogus taskmanager as expected

Module contents

Submodules

decisionengine.framework.dataspace.datablock module

duplicate()

Duplicate the datablock and return this new DataBlock. The intent is that at the point the duplication occurs there is only information from the sources in the DataBlock. This also increments the generation_id of this DataBlock.

TODO: Also update the header and the metadata information TODO: Make this threadsafe

```
Return type DataBlock
```

get(key, default=None)

Return the value associated with the key in the database

```
Return type dict
```

```
get_dataproducts(key=None)
```

get_header(key)

Return the Header associated with the key in the database

Return type Header

get_metadata(key)

Return the metadata associated with the key in the database

Return type Metadata

get_taskmanager(taskmanager_name, taskmanager_id=None)

Retrieve TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve :rtype: :obj: dict

```
The dictionary returned looks like: {'datestamp': datetime.datetime(2017, 12, 20, 17, 37, 17, 503210,
                 tzinfo=psycopg2.tz.FixedOffsetTimezone(offset=-360, name=None)),
              'sequence_id': 135L, 'name': 'AWS_Calculations', 'taskmanager_id': '77B16EB5-C79E-45B0-
              B1B1-37E846692E1D'}
     is_expired(key=None)
          Check if the dataproduct for a given key or any key is expired
     keys()
     mark_expired(expiration_time)
          Set the expiration_time for the current generation of the dataproduct and mark it as expired if expira-
          tion time <= current time
     put(key, value, header, metadata=None)
          Put data into the DataBlock
     store_taskmanager(taskmanager name, taskmanager id)

```

class decisionengine.framework.dataspace.datablock.ProductRetriever(product_name,

product_type,
product source)

Bases: object

decisionengine.framework.dataspace.datablock.compress(obj)

Compress python object :param obj: python object :return: compressed object

decisionengine.framework.dataspace.datablock.decompress(zbytes)

Decompress zipped byte stream, convert to string. :param zbytes: byte stream :return: uncompressed string

decisionengine.framework.dataspace.datablock.zdumps(obj)

Pickle and compress :param obj: a python object :return: compressed string

decisionengine.framework.dataspace.datablock.zloads(zbytes)

Decompress and unpickle If input is not compressed attempts to just unpickle it

Parameters zbytes – compressed bytes

Returns returns python object

decisionengine.framework.dataspace.datasource module

class decisionengine.framework.dataspace.datasource.DataSource(config)

Bases: object

_abc_impl = <_abc._abc_data object>

abstract close()

Close all connections to the database

abstract connect()

Create a pool of database connections

abstract create_tables()

Create database tables

dataproduct_table = 'dataproduct'

Name of the dataproduct table

abstract delete_data_older_than(days)

Delete data older that interval :type days: long :arg days: remove data older than interval

 $\textbf{abstract duplicate_datablock}(\textit{taskmanager_id}, \textit{generation_id}, \textit{new_generation_id})$

For the given taskmanager_id, make a copy of the datablock with given generation_id, set the generation_id for the datablock copy

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- new_generation_id (int) generation_id of the new datablock created

abstract get_datablock(taskmanager_id, generation_id)

Return the entire datablock from the dataproduct table for the given taskmanager_id, generation_id

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- generation_id (int) generation_id of the data

abstract get_dataproduct(taskmanager id, generation id, key)

Return the data from the dataproduct table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value

abstract get_dataproducts(taskmanager_id, key)

Return list of all data products associated with with taskmanager_id

Parameters key (string) – data product key

abstract get_header(taskmanager_id, generation_id, key)

Return the header from the header table for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value

abstract get_last_generation_id(taskmanager_name, taskmanager_id=None)

Return last generation id for current task manager or taskmanager w/ task_manager_id.

Parameters

- taskmanager_name (string) task manager name
- taskmanager_id (string) task manager id

abstract get_metadata(taskmanager_id, generation_id, key)

Return the metadata from the metadata table for the given taskmanager id, generation id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value

abstract get_schema(table=None)

Given the table name return it's schema

Parameters table (string) – Name of the table

abstract get_taskmanager(taskmanager name, taskmanager id)

Retrieve TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve

abstract get_taskmanagers(taskmanager_name=None, start_time=None, end_time=None)

Retrieve TaskManagers :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve

header_table = 'header'

Name of the header table

abstract insert(taskmanager_id, generation_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager_id, generation_id, key

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- **generation_id** (int) generation_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- **header** (Header) Header for the value
- header Metadata for the value

metadata_table = 'metadata'

Name of the metadata table

abstract reset_connections()

Drop any cached connections and reconnect to the database

abstract store_taskmanager(taskmanager_name, taskmanager_id, datestamp=None)

Store TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve :type datestamp: datetime :arg datestamp: datetime of created object, defaults to 'now'

taskmanager_table = 'taskmanager'

Name of the taskmanager table

abstract update(taskmanager_id, generation_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager_id, generation_id, key

Parameters

- taskmanager_id (string) taskmanager_id for generation to be retrieved
- generation_id (int) generation_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

decisionengine.framework.dataspace.dataspace module

$\textbf{class} \ \ \textbf{decisionengine.framework.dataspace.dataspace.DataSpace} (\textit{config})$

Bases: object

DataSpace class is collection of datablocks and provides interface to the database used to store the actual data

```
close()
```

```
delete(taskmanager_id, all_generations=False)
```

duplicate_datablock(taskmanager_id, generation_id, new_generation_id)

 ${\tt get_datablock}(\textit{taskmanager_id}, \textit{generation_id})$

get_dataproduct(taskmanager_id, generation_id, key)

get_dataproducts(taskmanager_id, key=None)

get_header(taskmanager_id, generation_id, key)

get_last_generation_id(taskmanager name, taskmanager id=None)

```
get_metadata(taskmanager_id, generation_id, key)
     get_taskmanager(taskmanager_name, taskmanager_id=None)
     get_taskmanagers(taskmanager_name=None, start_time=None, end_time=None)
     insert(taskmanager_id, generation_id, key, value, header, metadata)
     mark_demented(taskmanager id, keys, generation id=None)
     mark_expired(taskmanager id, generation id, key, expiry time)
     store_taskmanager(name, taskmanager_id, datestamp=None)
     update(taskmanager_id, generation_id, key, value, header, metadata)
exception decisionengine.framework.dataspace.dataspace.DataSpaceConfigurationError
     Bases: Exception
     Errors related to database access
exception decisionengine.framework.dataspace.dataspace.DataSpaceConnectionError
     Bases: Exception
     Errors related to database access
\textbf{exception} \ \ \text{decisionengine.} framework. data space. data space. \textbf{DataSpaceError}
     Bases: Exception
     Errors related to database access
exception decisionengine.framework.dataspace.dataspace.DataSpaceExistsError
     Bases: Exception
     Errors related to database access
decisionengine.framework.dataspace.maintain module
class decisionengine.framework.dataspace.maintain.Reaper(config)
     Bases: object
     Reaper provides functionality of periodic deletion of data older than retention interval in days
     The class attributes indicate a rational set of defaults that shouldn't be altered by user configuration.
     MIN_RETENTION_INTERVAL_DAYS = 7
     MIN_SECONDS_BETWEEN_RUNS = 7080
     _reaper_loop(delay)
          The thread actually runs this.
     reap()
          Actually spawn the query to delete the old records. Lock the state as this task doesn't have a cancel option.
     property retention_interval
          We have data constraints, so use a property to track
     property seconds_between_runs
          We have data constraints, so use a property to track
     start(delay=0)
          Start thread with an optional delay to start the thread in X seconds
```

```
stop()
```

Try to stop the reaper, will block if the reaper cannot be interupted.

Module contents

decisionengine.framework.engine package

Subpackages

decisionengine.framework.engine.tests package

Submodules

decisionengine.framework.engine.tests.fixtures module

pytest defaults

A DE Server using a private database

 ${\tt decisionengine.framework.engine.tests.fixtures.} \textbf{\textit{PG_DE_DB_WITHOUT_SCHEMA}} (\textit{request:} \\$

 $_pytest.fixtures.FixtureRequest)$ \rightarrow

psycopg2.extensions.connection

Fixture factory for PostgreSQL.

Parameters request - fixture request object

Returns postgresql client

decisionengine.framework.engine.tests.fixtures.**PG_DE_DB_WITH_SCHEMA**(*PG_DE_DB_WITHOUT_SCHEMA*) Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

decisionengine.framework.engine.tests.fixtures. $PG_PROG(request: _pytest.fixtures.FixtureRequest, tmpdir_factory: _pytest.tmpdir.TempdirFactory) <math>\rightarrow$

_pytest.tmpatr.rempatractory) \(\to \)
Iterator[pytest_postgresql.executor.PostgreSQLExecutor]

Process fixture for PostgreSQL.

Parameters request – fixture request object

Returns top executor

decisionengine.framework.engine.tests.fixtures.**SQLALCHEMY_PG_WITH_SCHEMA**(*PG_DE_DB_WITHOUT_SCHEMA*)

Get a blank database from pytest_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.engine.tests.fixtures.**SQLALCHEMY_TEMPFILE_SQLITE**(*tmp_path*)

Setup an SQLite database with the pytest tmp_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

```

Module contents

Submodules

decisionengine.framework.engine.DecisionEngine module

Main loop for Decision Engine. The following environment variable points to decision engine configuration file: DECISION_ENGINE_CONFIG_FILE if this environment variable is not defined the DE-Config.py file from the ``../tests/etc/ directory will be used.

```
{\bf class} \ \ {\bf decisionengine.framework.engine.DecisionEngine.DecisionEngine} ( {\it global\_config}, \\ {\it channel\_config\_loader}, \\ {\it server\_address}) \\ {\bf Bases: socketserver.ThreadingMixIn, xmlrpc.server.SimpleXMLRPCServer} \\ {\it \_dataframe\_to\_column\_names} ( {\it df}) \\ \\
```

```
_dataframe_to_csv(df)
_dataframe_to_json(df)
_dataframe_to_table(df)
_dataframe_to_vertical_tables(df)
_dispatch(method, params)
_ Dispatches the XML-RPC method.
```

XML-RPC calls are forwarded to a registered function that matches the called XML-RPC method name. If no such function exists then the call is forwarded to the registered instance, if available.

If the registered instance has a _dispatch method then that method will be called with the name of the XML-RPC method and its parameters as a tuple e.g. instance._dispatch('add',(2,3))

If the registered instance does not have a _dispatch method then the instance will be searched to find a matching method and, if found, will be called.

Methods beginning with an '_' are considered private and will not be called.

```

decisionengine.framework.engine.DecisionEngine._get_global_config(config_file, options)
decisionengine.framework.engine.DecisionEngine._start_de_server(server)
     Start the DE server and listen forever
decisionengine.framework.engine.DecisionEngine.main(args=None)
     If args is None, sys.argv will be used instead If args is a list, it will be used instead of sys.argv (for unit testing)
decisionengine.framework.engine.DecisionEngine.parse_program_options(args=None)
     If args is a list, it will be used instead of sys.argv
```

decisionengine.framework.engine.Workers module

Class that encapsulates a channel's task manager as a separate process.

This class' run function is called whenever the process is started. If the process is abruptly terminated—e.g. the run method is pre-empted by a signal or an os._exit(n) call—the Worker object will still exist even if the operating-system process no longer does.

To determine the exit code of this process, use the Worker.exitcode value, provided by the multiprocessing.Process base class.

Bases: object

This class manages and provides access to the task-manager workers.

The intention is that the decision engine never directly interacts with the workers but refers to them via a context manager:

```
with workers.access() as ws: # Access to ws now protected ws['new_channel'] = Worker(...)
```

In cases where the decision engine's block_while or block_until methods must be called (e.g. during tests), one should used the unguarded access:

```
with workers.unguarded_access() as ws: # Access to ws is unprotected ws['new_channel'].wait_until(...)
```

Calling a blocking method while using the protected context manager (i.e. workers.access()) will likely result in a deadlock.

decisionengine.framework.engine.de_client module

decisionengine.framework.engine.de_client.console_scripts_main(args_to_parse=None)

This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is an error message.

decisionengine.framework.engine.de_client.create_parser()

decisionengine.framework.engine.de_client.execute_command_from_args(argsparsed, de_socket) argsparsed should be from create_parser in this file

decisionengine.framework.engine.de_client.main(args_to_parse=None)

If you pass a list of args, they will be used instead of sys.argv

decisionengine.framework.engine.de query tool module

decisionengine.framework.engine.de_query_tool.console_scripts_main(args_to_parse=None)

This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is an error message.

decisionengine.framework.engine.de_query_tool.create_parser()

decisionengine.framework.engine.de_query_tool.execute_command_from_args(argsparsed, de_socket)

Calls the proper function for the arguments passed to de_query_tool.

Parameters

- **argsparsed** (Namespace) Should be from create_parser in this file.
- **de_socket** (*ServerProxy*) RPC Server Proxy.

Returns Output of the command.

Return type str

Parameters args_to_parse (*list*, *optional*) – If you pass a list of args, they will be used instead of sys.argv. Defaults to None.

Returns Query result

Return type str

decisionengine.framework.logicengine.tests.test_simple_configuration.test_rule_that_fires(myengine)
Module contents
Submodules
decisionengine.framework.logicengine.BooleanExpression module
class decisionengine.framework.logicengine.BooleanExpression.BooleanExpression(expr)
     Bases: object
     evaluate(d)
         Return the evaluated Boolen value of this expression in the context of the given data 'd'.
exception decisionengine.framework.logicengine.BooleanExpression.LogicError
     Bases: TypeError
decisionengine.framework.logicengine.BooleanExpression.function_name_from_call(callnode)
decisionengine.framework.logicengine.BooleanExpression.maybe_fail_on_error(expr)
```

decisionengine.framework.logicengine.FactLookup module

Establishes a policy for looking up a fact based on the given name.

To wit, the first fact with a given name is the one that is used in the evaluation of all subsequent facts.

As an example, consider the following configuration:

```
facts: { should_publish: "(True)",
}, rules: {
    publish_1: { expression: "should_publish", facts: ["should_publish"]
}, publish_2: {
        expression: "should_publish", actions: ["go_to_press"] facts: ["should_publish"]
} retract: {
        expression: "not should_publish", facts: ["should_retract"]
}
```

In the above, the first fact to be evaluated will always be the top-level facts (i.e. those not encapsulated by the 'rules' table). The rules labeled 'publish_1' and 'publish_2' both rely on the 'should_publish' fact in their expressions, and they in turn create their own facts with the same name. FactLookup ensures that 'publish_1' and 'publish 2' will both use the evaluated fact from the top-level 'facts' table.

```
rule_for(fact name)
```

Selects rule required to evaluate fact with the supplied name.

```
Parameters fact_name (str) – Name of fact for which rule will be selected.
```

Return type str

Returns Rule name

```
sorted_rules(rules_cfg)
```

Rules sorted according to rule dependencies.

Parameters rules_cfg (dict) – rules as specified in logic-engine configuration

Return type list

Returns Rules to be evaluated by the rule engine.

decisionengine.framework.logicengine.LogicEngine module

```
consumes()
```

Return the names of all the items that must be in the DataBlock for the rules to be evaluated.

evaluate(db)

Evaluate our facts and rules, in the context of the given data. db can be any mappable, in particular a DataBlock or dictionary.

Parameters db (DataBlock) – Products used to evaluate facts.

```
evaluate_facts(db)
```

Parameters db (DataBlock) – Products used to evaluate facts.

Return type dict

Returns Evaluated fact values (e.g. True or False) for each fact name.

produces()

decisionengine.framework.logicengine.Rule module

```
class decisionengine.framework.logicengine.Rule.Rule(rule name, rule cfg)
     Bases: object
```

In-memory representation of logic-engine rule, relying on parsing utilities in BooleanExpression.

```
evaluate(evaluated_facts)
```

Evaluates a compiled expression given the supplied facts.

Parameters evaluated_facts (dict) - Initial fact values (e.g. True or False) for each fact

Return type bool

decisionengine.framework.logicengine.RuleEngine module

```
class decisionengine.framework.logicengine.RuleEngine.RuleEngine(fact_names, rules_cfg)
     Bases: object
```

Engine responsible for evaluating logic-engine rules.

This class is responsible for (a) forming a sorted set of rules that supports dependencies between them, and (b) evaluating the rules according to a specified fact-lookup policy.

```
execute(evaluated_facts)
```

Evaluates all rules given the supplied facts.

Parameters evaluated_facts (dict) - Initial fact values (e.g. True or False) for each fact name.

Return type tuple

Returns Actions to be taken based on rule evaluation; new facts produced during that evaluation.

decisionengine.framework.modules.print_description.spec_if_main(cls)

Module contents

decisionengine.framework.taskmanager package

Submodules

decisionengine.framework.taskmanager.ProcessingState module

The ProcessingState class can represent any of the following task-manager states:

BOOT IDLE ACTIVE STEADY OFFLINE SHUTTINGDOWN SHUTDOWN ERROR

In addition, the class supports 'wait_until(state)' and 'wait_while(state)' methods, which, when called from a different process, block until the state has been entered or exited, respectively.

The 'RUNNING_CONDITIONS' list is a list of states that a thread may have if it is started/starting. The 'STOPPING_CONDITIONS' list is a list of states that a thread may have if it is stopped/stopping. The 'INAC-TIVE_CONDITIONS' list is a list of states that a thread may have when it is not active

```
class decisionengine.framework.taskmanager.ProcessingState.ProcessingState(state=State.BOOT)
    Bases: object
```

This object tracks the state of a process.

A number of convience wrappers are provided.

Additionally you may use the .lock attribute for with block to lock the state during specific operations.

get()

This function is a minimally locking check to fetch the state.

```
has_value(state)
inactive()
property lock
probably_running()
set(state)
```

This function will lock (and possibly block) to ensure a consistent change to the state value.

```
This function can be blocked using the .lock to force state sync between threads if need be.
     should_stop()
     wait_until(state, timeout=None)
     wait_while(state, timeout=None)
class decisionengine.framework.taskmanager.ProcessingState.State(value)
     Bases: enum.Enum
     An enumeration.
     ACTIVE = 2
     BOOT = 0
     ERROR = 7
     IDLE = 1
```

OFFLINE = 6

```
SHUTTINGDOWN = 4
     STEADY = 3
decisionengine.framework.taskmanager.TaskManager module
Task Manager
class decisionengine.framework.taskmanager.TaskManager.Channel_dict, channel_name)
     Bases: object
     Decision Channel. Instantiates workers according to channel configuration
class decisionengine.framework.taskmanager.TaskManager.TaskManager(name, generation_id,
                                                                            channel_dict, global_config)
     Bases: object
     Task Manager
     data_block_put(data, header, data_block)
          Put data into data block
              Parameters
                  • data (dict) – key, value pairs
                  • header (Header) – data header
                  • data_block (DataBlock) - data block
     decision_cycle()
          Decision cycle to be run periodically (by trigger)
     do_backup()
          Duplicate current data block and return its copy
              Return type DataBlock
     get_consumes()
     get_loglevel()
     get_produces()
     get_state()
     get_state_name()
     get_state_value()
     run()
          Task Manager main loop
     run_logic_engine(data_block=None)
          Run Logic Engine.
              Parameters data_block (DataBlock) – data block
     run_publishers(actions, facts, data_block=None)
          Run Publishers in main process.
              Parameters data_block (DataBlock) – data block
```

SHUTDOWN = 5

```
run_source(src)
          Get the data from source and put it into the data block
              Parameters src (Worker) – source Worker
     run_transform(transform, data_block)
          Run a transform
              Parameters
                  • transform (Worker) - source Worker
                  • data_block (DataBlock) – data block
     run_transforms(data_block=None)
          Run transforms. So far in main process.
              Parameters data_block (DataBlock) – data block
     set_loglevel_value(log_level)
          Assumes log_level is a string corresponding to the supported logging-module levels.
     set_to_shutdown()
     start_sources(data block=None)
          Start sources, each in a separate thread
              Parameters data_block (DataBlock) - data block
     take_offline(current data block)
          offline and stop task manager
     wait_for_all(events_done)
          Wait for all sources or transforms to finish
              Parameters events_done (list) – list of events to wait for
     wait_for_any(events_done)
          Wait for any sources to finish
              Parameters events_done (list) – list of events to wait for
class decisionengine.framework.taskmanager.TaskManager.Worker(conf_dict, base_class,
                                                                         channel name)
     Bases: object
     Provides interface to loadable modules an events to sycronise execution
decisionengine.framework.taskmanager.TaskManager._create_module_instance(config_dict,
                                                                                     base class,
                                                                                     channel name)
     Create instance of dynamically loaded module
decisionengine.framework.taskmanager.TaskManager._find_only_one_subclass(module, base_class)
     Search through module looking for only one subclass of the supplied base_class
decisionengine.framework.taskmanager.TaskManager._make_workers_for(configs, base_class,
                                                                              channel_name)
```

decisionengine.framework.taskmanager.module_graph module

```
Ensure no circularities in produces and consumes.
```

```
decisionengine.framework.taskmanager.module_graph._consumed_products(*worker_lists)
decisionengine.framework.taskmanager.module_graph._produced_products(*worker_lists)
decisionengine.framework.taskmanager.module_graph.ensure_no_circularities(sources, transforms, publishers)
```

Ensures no circularities among data products.

                                                   port=None)
     A DE Server using a private database
decisionengine.framework.tests.fixtures.PG_DE_DB_WITHOUT_SCHEMA(request:
                                                                   _pytest.fixtures.FixtureRequest)
                                                                   psycopg2.extensions.connection
     Fixture factory for PostgreSQL.
         Parameters request – fixture request object
```

Returns postgresql client

decisionengine.framework.tests.fixtures.**PG_DE_DB_WITH_SCHEMA**(*PG_DE_DB_WITHOUT_SCHEMA*) Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

decisionengine.framework.tests.fixtures. $PG_PROG(request: _pytest.fixtures.FixtureRequest, tmpdir_factory: _pytest.tmpdir.TempdirFactory) \rightarrow Iterator[pytest postgresql.executor.PostgreSQLExecutor]$

Process fixture for PostgreSQL.

Parameters request – fixture request object

Returns tcp executor

decisionengine.framework.tests.fixtures.**SQLALCHEMY_PG_WITH_SCHEMA**(*PG_DE_DB_WITHOUT_SCHEMA*)

Get a blank database from pytest_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.tests.fixtures.**SQLALCHEMY_TEMPFILE_SQLITE**(*tmp_path*)

Setup an SQLite database with the pytest tmp_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.tests.test client errors module

Fixture based DE Server tests of the sample config

decisionengine.framework.tests.test_client_errors.test_client_cannot_wait_on_bad_state(deserver) Verify wait is for a valid state

decisionengine.framework.tests.test client server module

```
Fixture based DE Server for the de-client tests
```

```
decisionengine.framework.tests.test_client_server.test_client_print_product(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_columns(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_columns_query(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_json(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_not_real(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_not_string(deserver)

Make sure the public API is protected against bad values

decisionengine.framework.tests.test_client_server.test_client_print_product_query(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_types(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_vertical(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_vertical(deserver)

decisionengine.framework.tests.test_client_server.test_client_status_msg_to_stdout(deserver)

Make sure the actuall client console call goes to stdout
```

decisionengine.framework.tests.test_defaults module

```
Fixture based DE Server tests of the sample config
decisionengine.framework.tests.test_defaults.test_client_can_get_de_server_show_channel_logger_level(des
     Verify unknown channel has NOTSET
decisionengine.framework.tests.test_defaults.test_client_de_config_is_json(deserver)
    Verify config can be fetched in json format
decisionengine.framework.tests.test_defaults.test_global_channel_log_level_in_config(deserver)
    Verify global_channel_log_level setting exists
decisionengine.framework.tests.test error on acquire module
decisionengine.framework.tests.test_error_on_acquire.test_source_only_channel(deserver)
decisionengine.framework.tests.test module program options module
decisionengine.framework.tests.test_module_program_options.test_acquire_for_sources()
decisionengine.framework.tests.test_module_program_options.test_config_templates()
decisionengine.framework.tests.test_module_program_options.test_descriptions()
decisionengine.framework.tests.test_module_program_options.test_help()
decisionengine.framework.tests.test_module_program_options.test_module_alias()
decisionengine.framework.tests.test guery tool server module
Fixture based DE Server for the de-query-tool tests
decisionengine.framework.tests.test_query_tool_server.test_query_tool_csv(deserver)
decisionengine.framework.tests.test_query_tool_server.test_query_tool_default(deserver)
decisionengine.framework.tests.test_query_tool_server.test_query_tool_invalid_product(deserver)
decisionengine.framework.tests.test_query_tool_server.test_query_tool_json(deserver)
decisionengine.framework.tests.test_query_tool_server.test_query_tool_since(deserver)
decisionengine.framework.tests.test reaper module
Fixture based DE Server for the reaper tests
decisionengine.framework.tests.test_reaper.test_client_can_get_de_server_reaper_start_delay(deserver)
     Verify reaper can start with delay
decisionengine.framework.tests.test_reaper.test_client_can_get_de_server_reaper_status(deserver)
    Verify reaper status
decisionengine.framework.tests.test_reaper.test_client_can_get_de_server_reaper_stop(deserver)
```

Verify reaper can stop

decisionengine.framework.tests.test restart channel module

decisionengine.framework.tests.test_restart_channel.deserver_mock_data_block(mock_data_block)
decisionengine.framework.tests.test_restart_channel.test_restart_channel(deserver_mock_data_block)

decisionengine.framework.tests.test sample config module

Fixture based DE Server tests of the defaults

- decisionengine.framework.tests.test_sample_config.test_client_can_double_set_de_server_channel_log_leve Verify set log level to current level isn't an error
- decisionengine.framework.tests.test_sample_config.test_client_can_get_de_server_channel_config(deserver) Verify config has expected items

decisionengine.framework.tests.test_sample_config.test_client_can_get_de_server_channel_log_level(deserver_channel_log_level)

decisionengine.framework.tests.test_sample_config.test_client_can_get_de_server_show_logger_level(deserver)

- Verify can fetch log level for a channel
- decisionengine.framework.tests.test_sample_config.test_client_can_get_de_server_show_config(deserver) Verify config has expected items
- Verify can fetch log level
- decisionengine.framework.tests.test_sample_config.test_client_can_get_de_server_status(deserver) Verify channel enters stable state
- decisionengine.framework.tests.test_sample_config.test_client_can_get_products(deserver)

 Verify client can get channel products
- decisionengine.framework.tests.test_sample_config.test_client_can_get_products_no_channels(deserver)

 Verify client can get channel products even when none are run
- decisionengine.framework.tests.test_sample_config.test_client_can_kill_one_channel(deserver) Verify client can kill a single channel
- decisionengine.framework.tests.test_sample_config.test_client_can_kill_one_channel_force(deserver) Verify client can kill a single channel with force
- decisionengine.framework.tests.test_sample_config.test_client_can_kill_one_channel_timeout(deserver)

 Verify client can kill a single channel with timeout
- decisionengine.framework.tests.test_sample_config.test_client_can_set_de_server_channel_log_level(deserver_verify set log level for a channel
- decisionengine.framework.tests.test_sample_config.test_client_can_start_one_channel(deserver) Verify client can start a single channel
- decisionengine.framework.tests.test_sample_config.test_client_can_stop_channels(deserver) Verify client can stop channels
- decisionengine.framework.tests.test_sample_config.test_client_can_stop_one_channel(deserver) Verify client can stop a single channel
- decisionengine.framework.tests.test_sample_config.test_client_can_stop_server(deserver) Verify de-client can run -stop

```
decisionengine.framework.tests.test_sample_config.test_client_cannot_double_start(deserver)

Verify client cannot double start channels
```

- decisionengine.framework.tests.test_sample_config.test_client_get_non_real_channel(deserver) Verify config for missing channel does what it should
- decisionengine.framework.tests.test_sample_config.test_client_start_non_real_channel(deserver) Verify start for missing channel does what it should
- decisionengine.framework.tests.test_sample_config.test_client_stop_non_real_channel(deserver) Verify stop for missing channel does what it should
- decisionengine.framework.tests.test_sample_config.test_client_wait_timeout_works(deserver) Verify channel enters stable state and timeout works too

decisionengine.framework.tests.test_source_proxy module

Fixture based tests of the SourceProxy module.

```
decisionengine.framework.tests.test_source_proxy.test_stop_failing_source_proxy(deserver_fail) decisionengine.framework.tests.test_source_proxy.test_working_source_proxy(deserver)
```

decisionengine.framework.tests.test start with bad channels module

```
Fixture based DE Server tests of invalid channel configs
```

```
decisionengine.framework.tests.test_start_with_bad_channels._consumes_not_subset(test_str)
decisionengine.framework.tests.test_start_with_bad_channels._expected_circularity(test_str)
decisionengine.framework.tests.test_start_with_bad_channels._missing_consumes(name)
decisionengine.framework.tests.test_start_with_bad_channels._missing_produces(name)
decisionengine.framework.tests.test_start_with_bad_channels.test_client_can_get_products_no_channels(design)
```

Verify client can get channel products even when none are run

decisionengine.framework.tests.test start with no channels module

```
Fixture based DE Server tests of the server without channels, then with them
```

```
decisionengine.framework.tests.test_start_with_no_channels.deserver_mock_data_block(mock_data_block)
decisionengine.framework.tests.test_start_with_no_channels.test_start_from_nothing(deserver_mock_data_block)
```

Module contents

decisionengine.framework.util package

Submodules

decisionengine.framework.util.fs module

```
{\tt decisionengine.framework.util.fs.} \textbf{files\_with\_extensions} (\textit{dir\_path}, *\textit{extensions})
```

Return all files in dir_path that match the provided extensions.

If no extensions are given, then all files in dir_path are returned.

Results are sorted by channel name to ensure stable output.

decisionengine.framework.util.metrics module

```
class decisionengine.framework.util.metrics.Counter(name, documentation, labelnames=(),
                                                            namespace=", subsystem=", unit=", reg-
                                                            istry=<prometheus_client.registry.CollectorRegistry
                                                            object>, _labelvalues=None)
     Bases: prometheus_client.metrics.Counter
class decisionengine.framework.util.metrics.Gauge(*args, **kwargs)
     Bases: prometheus_client.metrics.Gauge
     Override prometheus client Gauge so that muliproccess_mode 'liveall' is the default as opposed to 'all'
     _DEFAULT_MULTIPROC_MODE = 'liveall'
     __determine_multiprocess_mode_existence(*args, **kwargs)
class decisionengine.framework.util.metrics.Histogram(name, documentation, labelnames=(),
                                                              namespace=", subsystem=", unit=", reg-
                                                              istry=<prometheus_client.registry.CollectorRegistry

                                                              0.01, 0.025, 0.05, 0.075, 0.1, 0.25, 0.5, 0.75,
                                                              1.0, 2.5, 5.0, 7.5, 10.0, inf))
     Bases: prometheus_client.metrics.Histogram
class decisionengine.framework.util.metrics.Summary(name, documentation, labelnames=(),
                                                            namespace=", subsystem=", unit=", reg-
                                                            istry=eprometheus_client.registry.CollectorRegistry
                                                            object>, _labelvalues=None)
     Bases: prometheus_client.metrics.Summary
```

decisionengine.framework.util.reaper module

```
A stand-alone script purges data in database older than specified in configuration. Configuration file has to have this
bit added:
     {
              "dataspace" [{ "retention_interval_in_days"][365,]
                   "datasource": { ... }
                 }
Can be used in a cron job.
decisionengine.framework.util.reaper.main()
decisionengine.framework.util.singleton module
class decisionengine.framework.util.singleton.ScopedSingleton
     Bases: decisionengine.framework.util.singleton.Singleton
     Singleton pattern using Metaclass with weak refs
     _instances = <WeakValueDictionary>
class decisionengine.framework.util.singleton.ScopedSingletonABC(name, bases, namespace,
                                                                        **kwargs)
     Bases: abc.ABCMeta, decisionengine.framework.util.singleton.ScopedSingleton
class decisionengine.framework.util.singleton.Singleton
     Bases: type
     Singleton pattern using Metaclass with strong refs
     _instances = {}
class decisionengine.framework.util.singleton.SingletonABC(name, bases, namespace, **kwargs)
     Bases: abc.ABCMeta, decisionengine.framework.util.singleton.Singleton
decisionengine.framework.util.sockets module
decisionengine.framework.util.sockets.get_random_port()
decisionengine.framework.util.subclasses module
decisionengine.framework.util.subclasses._derived_class(cls, base_class)
     Only matches subclasses that are not equal to the base class.
decisionengine.framework.util.subclasses.all_subclasses(module, base_class)
     Return all of a module's subclasses of the given base class.
```
