Ру	ython Module Index	123
Index		127

The Decision Engine is a critical component of the HEP Cloud Facility. It provides the functionality of resource scheduling for disparate resource providers, including those which may have a cost or restricted allocation of cycles. This package, decisionengine, provides the framework and base classes, the decisionengine\_modules package contains provider specific implementations of the base classes.

# **RELEASE NOTES**

# 1.1 Release Notes

HEPCloud's Decision Engine release notes.

The latest release is the designated production release. Decision Engine will support also N-1. New feature development will happen in the development branch and go in the next (N+1) release.

# 1.1.1 Release 2.0.1

Patch level (bug fix) release.

#### Issues fixed in this release

# Bugs fixed

- DE 639: de-client –status stalls whenever channels are not yet in STEADY state
- DE 638: Sources should go offline if the client channel offline
- DE 634: de-client –stop-channel / –start-channel doesn't work in 2.0rc2
- DE 626: New DE 2.0rc2 regularly takes 2-3 minutes to shut down
- DE 599: Clarify timeout variable in block\_while()
- DE 522: Decision engine log files get split between several different processes with several different versions open
- DE 236: New race condition in de-client

# Enhancements:

• DE 650: Added separate log files for Sources

#### Full list of commits since version 2.0.0

b5e56ab8: Remove signal handler.

0fb6814b: Prevent blocking (if possible) during service actions.

bb68fc31: Add logging handler to client-message receiver.

53fefbc5: Update kombu version.

009cdd95: Use kombu queues for server/client communication.

29a1ee25: add distinct logging for sources

e44e9210: Update GitHub actions; pylint workaround.

d192f8fb: Lock typing\_extensions for Python 3.6 compat

2b946043: Fix pre-commit node version to 17.9.0, the last to support SL7.

76f3ddfb: lock pyupgrade to python3.6 support

c9c7cb3e: Include psutil as part of runtime requirements.

df8a3941: Make sure to kill worker process.

69924d0c: Do not block de-client calls during startup.

ddb18d7c: Minor cleanups.

f4dc7da7: Do not take source offline more than once during detach.

cbffa992: Update Docker entrypoint script for DE 2.0 branch

e10fe5af: Fixed cross-package link in the documentation

9da1eac8: Added cross-package link in the documentation

d278726b: Updated 2.0 release notes and indexes, ready for 2.0.0

#### 1.1.2 Release 2.0.0

This release series follows 1.7. A lot started to happen in 1.7.0 and has happened since, so we felt it was proper to change the major version number. We are proud to introduce Decision Engine 2.0.0 to outside users: it provides a friendlier installation procedure and configuration samples to test it on all resources supported by the GlideinWMS Factory, like OSG, some HPC resources and commercial cloud providers.

- · New architecture with redesigned source system using Kombu message passing with a Redis backend.
- Token support via DE modules: support for SciToken, WlcgToken (for CE authentication) and HTCondor Idtokens (for Glideins and Factory communication)
- Separation from the GlideinWMS Frontend. Decision Engine still shares some libraries with GlideinWMS but you don't need any more to install and configure the Frontend.
- Structured logging. Improved python logging and adoption of structured logs format that will increase the semantinc content of the messages and ease the export of information for dashboards and Elastic Search.
- Monitoring via Prometheus.
- SQLAlchemy object-relational mapper to increase the testability of DB interactions and to allow different database backends.
- Packaging via setuptools for both decisionengine and decisionengine\_modules: Dependencies are not yet fully listed in the RPMs.

- Added support of CentOS8 (RHEL7 is still out main platform)
- Configuration example using HTC resources via GlideinWMS Factory
- Decision Engine is distributed under the Apache 2.0 license
- We increased our CI tests including also code auto-formatting and license compliance. We introduced integration tests and we are proud of our over 95% unit test coverage.

**Note:** SQLAlchemy is required and is now the only datasource backend supported. Upgrading from a different datasource backend (1.6 or earlier were using direct PostgreSQL, 1.7 was supporting both) is a one-way change with a migration tool. We suggest dropping all objects if you wish to reuse the tablespace. You can preserve a copy of the old database to query historical information.

Note: Added requirement on the Kombu library and a Redis server. We suggest to install Redis using a container.

Note: Added requirement on prometheus-client. Prometheus is be used as optional monitoring component.

#### Issues fixed in this release

- 528: Update license and add copyright notices
- 207: Under certain circumstances the fetch of the "consumes" information fails but the channel does not go offline operations
- 547: Update DE client libs to pgsql-12
- 459: Setuptools issues in decisionengine rpm
- 546: Request CentOS8 Stream support for Decision Engine
- 453: Struct Logging Self test errors with pytest-xdist
- 418: Add auto-formatting of the code
- 134: Yum update on decisionengine rpm doesn't restart the service
- 480: Request: Make postgresql migration script to migrate from old postgresql schema to new sqlalchemy schema

#### Full list of commits since version 1.7.0

685a3a8e: Added changelog file for developers curated list of changes

044f4463: Updated 1.7 and 2.0 release notes, ready for 2.0.0 RC4

19994fb5: Convert timeout program options to floats.

e2055f92: Address Marco's review comments.

abdf35ad: Restore multiple queues but purge source queue after each publish.

52936cb5: Improve error-handling.

aad20744: Change to multiprocessing.Lock for protecting channel/source workers.

24bbee41: Adjust launching of source workers in attempt to avoid deadlock.

6d13a392: Remove unnecessary (and perhaps harmful) external updating of channel states. 5456f32f: Improve test coverage. 1afabb70: Use service\_actions to disable sources whenever client channels fail. 7f67a172: Various naming and logging adjustments e6e49184: Adjust de-client –status and add –product-dependencies program option. a7c1f351: Apply block-while timeout to all channels, not each channel. 3d739ec7: Update ci workflow to include workflow\_dispatch mechanism and to customize artifact file name c5a05650: Archive unit test logs in case of unit test failure and make them available as artifacts e94c2abb: Update Python 3.6-compatible pre-commit hooks. aeb6b974: Update Countdown docstrings. 525eb3a8: Add Countdown class to address global timeout problem. 4c458e0c: Updated release notes for 2.0.0 RC3 (1.7.99.post3) 137b574a: Add a minimal container image more suited to production usage 9d7f6875: Provide de-client –queue-status program option. a7dcc30d: Ensure that channels and sources shared the same queues. 49a316e0: Restore pyupgrade to v2.30, which works on Python 3.6 2ce5ccb6: [pre-commit.ci] pre-commit autoupdate 7bd41851: Print number of pickled bytes of source-produced data. 97aed846: Protect tests from Redis DB/routing-key collisions. 4d3abab7: Flush the Redis DB once the DE server stops. e36c2150: Remove unnecessary @pytest.mark.usefixtures(...) decorations. 30d68610: More unit testing 7850995d: We should have one path where we test without -v. a81a52cc: A simple test to ensure the metrics can run 7547720c: Logger tests are a bit unstable at high parallelization. 56516df7: Add missing test to ensure we can change the channel level twice abde7d0f: Add missing tests for inherited functions 6522ed37: Note lines we are not testing de7829a4: Remove the unit test log directory if it got created 28fbd599: pin jsonnet 0.17.0 9c5c827e: Metrics seems to want the channels setup to complete b8829997: Pin pytest version b348d6f7: Fix deadlock starting cherrypy metrics server

Chapter 1. Release Notes

7697e6c1: Log invocation of random port

9e7e4813: Clarify note on xdist, run more workers

0b495fbf: Leave note to remember to cleanup temp files

```
ca5ddf6f: Ensure we are calling the cherrypy shutdown methods
e60efe78: Move metrics fixtures to the fixtures file
9c717cc5: Log finished with DB init
55965f9e: Prep the server fixture to permit the metrics webserver
732ff99b: Add a 'ping' method
6117cc95: [pre-commit.ci] pre-commit autoupdate
b5af73ca: More logging about cherrypy state
dfe4278f: Added unlinked release notes for DE 2.0.0
7d6484ad: Test source shared between two channels.
ae29d9d1: Test same source types, separate channels
6095d33f: Test LatestMessages utility.
dfbf3e06: Separate sources from channels.
2c10391e: Remove source proxy
afce7cff: Add some more logging to try and trace startup state
dbd49a66: Explicitly pass .coveragerc to pytest.
e6b03216: Set max retry timeout for sqlite in unit tests.
51bed3d6: Updated documentation for 1.7.1 release
3829151f: Allow duplicate keys if their values are the same.
1ea288e0: [pre-commit.ci] pre-commit autoupdate
6b6611e5: Use pre-commit.ci rather than local actions
dedbe4bd: Use local time for structlog timestamp
461c506e: Make sure de_std.libsonnet is provided when packaged.
f93b5963: Update pre-commit hook versions and accommodate python-debian issue.
bba51609: Reduce number of fixtures.
a4510cb1: Segment the update for setuptools so it gets cached correctly
40098f35: Merge pull request #584 from jcpunk/user-pip
4e1b79a1: Merge pull request #583 from jcpunk/drop-dbutils
72c8db4a: Recommend using the site user pip dir instead.
ff604495: Drop unneeded module
b203e2c4: remove extraneous 'import gc'
ee2278e7: replace needed import
4b7dedf2: add licensing info
e5a56816: add licensing info
a114abba: add licensing info
```

c2d511cd: adding queue logging to de\_logger 77dd8d5a: Also run checks on backports to 1.7

```
7c029578: Updated developers instructions w/license maintenance via REUSE information
e66b985d: Fix faulty tests.
d1a86c57: Set Apache 2.0 license and added REUSE compliance
e488030e: Ensure that redis is running.
6c982c11: Report PID for source process.
3f844ca4: Further flesh out the documentation
1d750001: Simplifications and rearrangements.
b85dca45: Set state to error for exceptions caught before the thread start.
c4727acb: Changed summaries to histograms in DecisionEngine and TaskManager modules
6fa0bf4d: Added install document and updated the index and development instructions accordingly
e4de391e: Do the build of the wheel as not-root per our requirements
24ba5272: Add a redis server to the CI testing containers
c939a6ed: Address Pat's comments.
1925a7b0: First implementation using Kombu/redis to communicate data from sources to cycles.
82faa271: Don't try to package obsolete sql file
9cbffe94: Drop redundant tests.
ab0de9a5: Drop obsolete raw postgresql interface
164b36d3: Removed unnecessary comment
91f7a76f: Fixed rebase errors
e475fbd5: Added import statement to fix MultiProcessCollector
a409f126: Add no-webserver setting to all DE Test Workers
39cca32e: Moved multiprocess import to metrics to clean up imports.
73762e90: Added -no-webserver to invocations of DEServer
303ee4be: Added __all__ global to control what is exported.
5170224b: Allow for metrics disabling from systemd unit file
2cacef4f: Added check for proper metrics environment and associated unit tests
a637a088: Make webserver operation configurable
b3d6445a: Changed set_to_function calls to set() calls for metrics
5dccc7fa: Changed metric names to match prometheus convention
7371c2e8: Added cherrypy requirement
2c511cea: Added metrics to record time to run Modules and DecisionEngine rpc calls
c24d33bc: Renamed prometheus.py to metrics.py
2335134d: Moved TaskManager metrics to util/prometheus.py to avoid duplicates
3c1b790c: Added metrics endpoint to RPC server, changed prometheus to multiprocess mode, and added CherryPy
webserver for prometheus metrics
d8972de0: Added unit tests for metrics API
```

```
7b0f641b: Add instructions for running the Redis container.
8d0c4919: Block pytest-postgresql 4
d988f1a0: Lower timeout for actions.
4f920dcc: Simplifications in preparation for Kombu.
eb9f4292: Make TaskManager not executable
00c8f6e6: Remove unused files.
dd990d2c: Adding de-logparser, a tool to help parsing Decision Engine semi-structured logs
1da0d61e: Added a comment to help developers with incomplete installation
1cbc7334: Drop testing/support for PyPy
3ba3e8e6: Ignoring E203, whitespace after ':', since black is adding the whitespace
814669d5: Disable PyPy test that fails for PG_DE_DB_WITH_SCHEMA fixture value.
8d68c287: Fix debug message
33db6425: Test composite workflows using source proxies and configuration combination.
30951a5b: EL7 doesn't ship with a new enough golang for jsonnetfmt
e72eb3fd: Forbid inheritance from SourceProxy.
e95071fd: Automatically format isonnet files with isonnetfmt
355ccd45: Correct tests for python 3.10
64119161: Start testing python 3.10
c1cb8258: add dummy source and test
31b0f30b: Check for duplicate keys after source proxies have been removed.
140a4c47: Fix configuration-combination function signature.
d4a05299: Remove now unnecessary blocking.
1e78a889: Don't run setup.py as root
a71d5b0a: Add error for running server as root
cd345701: Incrase coverage in LogicEngine
6c132924: Fix out of sync devel requirements
8bfab003: Start running tests with xdist
aebe7d49: Remove unnecessary conversion to Pandas dataframe.
28919b16: Allow channels to boot in parallel.
c4fc5997: Improve parameter and variable names.
e021419b: Encourage use of automatic nag hook
cc4e469a: Update hooks to latest via pre-commit autoupgrade
cef30b69: Further simplify some cases
590bea3f: Add channel-combination facilities.
```

a4a7938c: Various simplifications recommended by flake8-simple

d5157416: Possible simplification to logging.

# decisionengine, Release 2.0.2.dev9+g4f6fc134

81e3d1ee: Fix pylint error on *create\_runner* and *ProcessingState* 

2a328c25: Added missing init file to make managers a package

d7f44015: Rework tests for #454

9521d3ce: Add debug statement when default logic-engine configuration is used.

c6dc778c: Unconditionally execute publishers with default configured logic engine.

a48dd7d8: Remove now-unnecessary Python-to-Jsonnet conversion.

a6a81ce7: Run autoformatters

49dac1ec: Setup pre-commit hooks for autoformatters

3800cc2a: Run the code style/standards checks early.

1d42eb0d: TaskManager now inherits from ComponentManager. Also added SourceManager, ChannelManager, and SourceSubscriptionManager files for future integration.

85a16f3b: Python optimised byte code removes assert under some conditions

bed2f5d9: Support latest setuptools\_scm release

# 1.1.3 Release 1.7.3

Same as 1.7.1 release. Dome to mantain the same version number as decisionengine\_modules.

# 1.1.4 Release 1.7.2

Same as 1.7.1 release. Done to maintain the same version number as decisionengine\_modules.

#### 1.1.5 Release 1.7.1

Patch level (bug fix) release.

#### Issues fixed in this release

## Bugs fixed

• DE 522: Decision engine log files get split between several different processes with several different versions open: (fd1e99ce)

#### **Enhancements:**

• Added dummy sources (de1536fa)

#### Full list of commits since version 1.7.0

606e1e9f: Merge pull request #585 from vitodb/fix/1.7/vito port PR527

538cf940: Merge pull request #586 from HEPCloud/goodenou-patch-remove-gc

67febfd0: remove unnecessary 'import gc'

9da797d3: Improve parameter and variable names.

55a5b547: porting #PR515 into 1.7 (simplifications to logging in Modules) cherry-picked from commit d515741

fd1e99ce: porting #PR563 into 1.7 (adding queue logging into de\_logger)

c75deef4: Also run tests on PRs for backports to 1.7

de1536fa: add dummy source and test

#### 1.1.6 Release 1.7.0

#### This release features:

- New produces-consumes structure using decorators. This will improve the code quality, improving static checks and reducing the lines of code by removing repetitive boilerplates, especially in the modules.
- Added structured logging. Improved python logging and adoption of structured logs format that will increase the semantinc content of the messages and ease the export of information for dashboards and Elastic Search.
- Added SQLAlchemy object-relational mapper to increase the testability of DB interactions and to allow different database backends. Switching between datasource backends requires dropping all objects if you wish to reuse the tablespace.
- Packaging via setuptools for both decisionengine and decisionengine\_modules: Dependencies are not yet fully listed in the RPMs.
- A new, optional, configuration parameter called "channel\_name" is available. "channel\_name" is one of the keys in the output dictionary of the structured logging and will be used in the upcoming monitoring. If the variable is not defined in the configuration file, then it is taken from the name of the file, e.g. the job\_classification.jsonnet config file gives a default "channel\_name" value of "job\_classification".

**Note:** Added requirement on SQLAlchemy (for new datasource backend). Non-SQLAlchemy users should ensure the indexes from 13c2f283 are in their database.

Note: Added requirement on prometheus-client. Prometheus will be used as optional monitoring component.

**Note:** The "channel\_name" key in the Source Proxy config dictionaries needs to be changed to "source\_channel". "channel\_name" is now being used to describe the name of the channel itself, not the name of the channel the Source Proxy is gettting information from.

#### Issues fixed in this release

- 481: Channel name should be available to all worker types in TaskManager
- 456: Logic engine messages show in the main DE log (1.6.99 post4) prj\_testing
- 458: Exception in new SQLAlchemy data source 1.6.99post4
- 455: New postgresql exception in 1.6.99post4 (aka Fixed databese inconsistency silently ignored in v1.6)
- 456: Logic engine messages show in the main DE log (1.6.99 post4)
- 451: Transforms executed in wrong order in 1.6.99.post3
- 367: Test race conditions bug
- 406: Taskmanager doesn't use/honor global log level
- 379: Add postgresql.sql to distributed decisionengine rpm
- 329: Docker container is missing pylint
- 293: Drop requirements.txt setup mode
- 285: Unify ProcessingState with Reaper state management code
- 253: Decision engine can sometimes start up at boot time before network name resolution is working (ae04db5)

#### Full list of commits since version 1.6.0

```
f42558df: Updated documentation for 1.7.0 release
```

029d118a: Updated release notes for 1.7.0 RC4 (1.6.99.post8)

0e19c754: fix SP

810994af: Update release\_notes\_1.7.rst fbee95e7: Update release\_notes\_1.7.rst 68b955b0: Make sure product is a string

ef7a8b96: Automatically adjust PYTHONPATH for tests

e292d388: Updated release notes for 1.7.0 RC3 (1.6.99.post7)

d60b6e4e: new changes for logging with common logger name "channel"

8cdeb67e: Simplify return expression

8fb128d3: Ensure file is "flushed" so name is fully established

7806aa00: Add github CodeQL analysis

9f09bca9: removed modules/LogicEngine.py and corresponding test

b9d28fbf: Cleaner check for Any

cc91aa24: Switch to fstring formatting

7bb5b64f: Just return created value rather than store then return

f4847fbe: Combine nested with blocks

4ba38bcd: Drop redundant brackets

bdcfe8c9: By convention, pandas is usually imported as pd

1dd904ff: Use more traditional expression order

```
cccd31bc: Unused loop vars should start with _
c055a5cd: Drop _keys in favor of DB backed keys
e8c689b4: Moved prometheus-client requirement to proper place in list
5391500d: Added metrics API module
c2d7835c: Drop unnecessary timeout
c167fc50: Add tests for de-query-tool entry point
efabfeb3: Updated release notes for 1.7.0 RC2 (1.6.99.post6)
b2739c14: moved logging of LogicEngine from decisionengine logger to channel loggers
0c0532f3: Add locks to help ensure data changes are "atomic"
ae63c6ee: Use DB generated known keys so it always matches DB state
b2259e9e: Use public .keys() rather than internal implementation
85b6c3ba: Real world data shows the defaults are fine
95fb3fdf: Further constrain tablespace
3ebe8619: Finish implementation of get_datablock
edbb3568: Add entry point for de-query-tool
fed95c62: adding logging of importlib imports of modules
53e62f03: Sometimes pypy times out on the cleanup.
a44d4bc4: Don't test sqlite on pypy it isn't necessary
b13aa8a9: Some corrections
94c14110: Fix missing defines
5f102095: More detailed testing of datablock
b6c99021: Make sure our sqlite tests have ForeignKeyConditional support
6b76ba7c: Fix typo
6694369d: Ensure dbutils uses transactions
1df400ae: Fix spaces
5278fd99: Raise timout for numpy on pypy
6d0a1a74: Release notes ready for v1.7.0
084f74e1: Initial SQLAlchemy Datasource
3353aa00: Make sure our jsonnet is json synatx valid
402b1c26: Fix transform-ordering problem.
49297573: Fix incorrect packaging of tests at top level
fbfae499: The test_channel loads data once per second.
33f9ade1: Rename taskmanager test nodb
308343e9: Initial modifications for addition of structured logging
6f337b75: Add missing error message
```

23a4b770: Call fixtures in a cleaner manner for xdist

```
1f2fe8c4: Add self.config so I can introspect the fixtures later
689c0020: Add missing config attrib test
d2732816: Best practices are for fixtues to yield vs return
accef50a: Seed SQLAlchemy fixtures for later activation
31002bc5: Help define the fixture interlocking
0f5fb129: The pandas 1.3.0 doesn't build against PyPy any longer
a7d18a41: Correctly test datablock construction paths
9af4c144: the mock package was a backport for python2.
5ddaff8f: Add another constructor test
9ae9ad13: Make sure if the client says to stop we don't override it
a581cd2b: run pyupgrade against codebase for python3.6
09e4e79c: Handle reaper duplicate shutdowns more cleanly
64d29dc5: Drop pointless cache restore
1c6b2588: Update PyPy to 3.7 for testing
2bae173e: Increase wait for overloaded test workers, update log messages
b67c185c: When aborting CI builds cleanup all processes
6c5d6306: Trim pytest fast functions, add required plugin
8c63ca6b: note why we're ignoring this line
2bd4ecbc: Add a syntax check for the toml files
e2dca404: Sometimes these get stuck
6d012fab: Add in Jenkinsfile pipeline configuration a timeout at stage level
baf07973: Add timeout option to block-while/until
970faf92: Make pre-commit happy
0cea2285: Fix alignment issue
5620c65b: List why we aren't checking
88611d90: Ensure fixtures are cleaned up between invocations
0ba135d2: Setup blank DB for SQLAlchemy tests and prep fixtures
3793e674: Setup pre-commit
9e6d1317: Migrate test_Reaper to pytest fixtures
51df43bf: Cleanup a bunch of pointless whitespace
96e5d069: Fix typo
9f96f418: Setup datablock to use our paramaterized fixture
36ebc66c: Add config for LGTM
c6032e5f: Use topologically sorted transforms to remove some multi-threading.
e063f82a: Drop pointless comma
```

bfd6689e: Begin prepwork for PEP517

```
72c5725f: Stub out null source rather than more complex mocking
3b65e5e2: Push Singleton into its own space
fb5b177e: Put fixtures in central location
5ab3cbaa: Add more details to channel startup logs
afe7f7d7: Add log about what DB we are hitting
38034b2c: Let the datasource handle the connections internally
5e03b6fe: Since we are opening an IPv4 socket, just use 127.0.0.1 to check
cac2bef3: Fix missing version requirements
3be8f84f: Add line lenght for autoformater
90e2baad: Protect against inappropriate wait under error condition.
943a17a7: Fix de-client typo and adjust tests accordingly.
3b104eba: Set the logs to DEBUG for testing
4c5564d4: Add another sync method to try and make tests less spotty
66bd81f2: Make sure to encourage updates to tools
d16f04cc: Put postgresql datasource schema into RPM
62b97e79: Fix str so it includes all the data
611ef1f8: Drop pointless lines
5b9e2fb6: Drop unreachable excepts
6991f65f: Restore product-name translation required for some source-proxy cases.
f6258c09: Fixed formatting and updated content
104a0446: Update index.rst
2ed61289: Update index.rst
cb687150: Create release_notes.rst
3b57d4a2: Note new requirement
871af08b: Added 1.7.0 release notes
ce42b802: improved 1.6 release note
583c10fb: fixed rst error
96d4dc1e: Added 1.6.2 release notes, from branch 1.6
13c2f283: Add some helpful indexes to our default schema
29c32571: Log as workers are started
619021c2: One of these tests seems to be spotty, break them out to find which one
29a2c72d: Run the test in a way that gives us colors
4e36bfd2: Drop unused table create logic
5511f69e: Stronger notify state for when we've a lot of watchers.
```

b6cc7a46: Test the dataspace abstractions e3b1f594: Better messages about our state

# decisionengine, Release 2.0.2.dev9+g4f6fc134

2d2feab9: Drop duplicate tests, leave specifics 8e737329: Add parameter based datasource api tests 5c023aa5: Don't do debug logs for flake8, they aren't helpful f5d1a12f: Setup list of public exports for dataspace.py 7158b422: Merge pull request #365 from jcpunk/bad-update-is-error cd98cc4a: Update should error out if you try to do it wrongly eb7907fe: Add option to set taskmanager datestamp and sample usage e124532c: Make sure the fixture uses the production flow a8241b6e: Make sure RPM also owns the .egg-info so we don't confuse the namespaces da87376e: Ensure the DE server is fully started before running query 622bfacf: Simplify use of our PG fixtures df98ecdf: Fixed flake8 issue 061ff6cf: decisionengine/framework: stop\_channel runs Publisher shutdown methods 3727b80b: Fixup comment to avoid assuming this test uses the DB d45aaf6b: Fix script path typo a25a4a30: Fix ABC to match our actual usage 1510b2d1: Address minor linting issues 945e4b16: Fix missing attribute insert 5eace9d5: Add note for how to get modules in place 50a8e268: Add list of packages in the CI env to output b9cb197d: Sanity check the home directory cd17223c: Have client provide a hint when you ask for no behavior 95b02365: Fix de-query-tool to support produce/consume model e660ca72: Update required versions for bugfixes 6863cb81: Fix path error bb52e8b1: Merge pull request #340 from jcpunk/service-stop 6d7aba95: Drop obsolete files 168ae7aa: Name the tests better 0f60c4e3: Support new produces/consumes/configuration-description infrastructure. 81912469: Add de-query-tool 2a26c944: ExecStopPre is not supported on all systemd instances 67a54d5c: Merge pull request #338 from jcpunk/fix-pytest-postgres 70ab133f: Fixup use of pytest\_postgresql for version 3.0.0 f8f4255e: Merge pull request #337 from jcpunk/thread-names 5f49a4f6: Set names for the various parallel code 64da77c6: Merge pull request #327 from jcpunk/datablock-expire

```
de33a60a: Merge pull request #336 from knoepfel/use-toposort
31a8a905: Merge pull request #328 from knoepfel/de-class-inference
410e383d: Merge pull request #331 from jcpunk/reaper-interval-tests
719ff0c8: Test datablock expire funtions
e14c49d8: The 'name' parameter is optional.
7846c9f3: Enable DE class inference based on configuration.
32ab7e44: Use third-party topological sort.
01aa8ae6: Merge pull request #325 from jcpunk/channel-tests
52b48479: Merge pull request #326 from jcpunk/valid-config-tests
8c4749e7: Merge pull request #330 from jcpunk/pylint-actions
a37770c9: Ensure validation testing is tested
d8ab5eb6: Add missing test to ensure the run interval is actually used
0cd9c42b: Also run pylint for extra sanity checks
c5cf1fff: Ensure our errors error out
baf01700: Merge pull request #324 from jcpunk/cleanup-trivial-tests
2a0133aa: Try to cleanup trivial missing coverage
44e0ad6f: Merge pull request #323 from jcpunk/about-coverage
d811f617: Merge pull request #322 from knoepfel/fix-fail-on-error
cb426262: Merge pull request #312 from jcpunk/finish-setuptools
8f6d407d: Merge pull request #316 from jcpunk/abc-coverage
4d0676bb: Merge pull request #317 from vitodb/pylint
d7c43b96: Use regular expression to support fail_on_error feature.
ada66925: add support to run pylint tests
efb1e57b: Finish migration to pure setuptools
bc4720cf: We aren't testing 'unversioned' releases
e4dc35e3: Merge pull request #314 from jcpunk/jsonnet_syntax
87e32c22: Merge pull request #294 from jcpunk/move-reaper
dec85d5e: Merge pull request #319 from jcpunk/task-loop
4108472a: Merge pull request #320 from jcpunk/container-swig
920af1c9: Merge pull request #321 from knoepfel/include-init-files
650dffa7: Don't forget __init__.py files.
1b412e03: The latest m2crypto seems to need swig now
a6e3ab1c: Merge pull request #313 from jcpunk/conf-test
1205636a: Simplify run loop
```

30e59dc9: fix test\_client\_with\_no\_server\_verbose unit test for Jenkins CI (#315)

10384a8c: Move reaper into its own place and reuse state logic

```
940584e4: No real way to test abstract base classes
250c14b1: The _validate function doesn't permit missing 'PRODUCES'
5ae1ce9f: Make sure syntax error in config names the problem
b899fa23: Add SourceProxy module test. (#307)
7b3df14c: Increae coverage of utils (#304)
ddba2a31: Fix duplicate entry warning (#311)
915673fa: Test modules minimally (#298)
bc0c21a9: Some repos may error out, don't let them kill the build (#297)
924a7047: doc: add 1.6.1 release notes
b1ab4d31: doc: fix typo
85e5d714: postgresql: do not print stack trace for low level library (#309)
255c6415: Setuptools uses entry return value as an error msg (#303)
2fd8db45: Fix name to match expectations (#305)
9cddb70a: updated release notes
7fe0358e: Error in more clean methods (#300)
84aa506c: Fix a bug in setup.py parsing of requirements. (#301)
```

## 1.1.7 Release 1.6.2

a58b61bb: fix typo in release notes

Patch level (bug fix) release.

#### Issues fixed in this release

#### Bugs fixed

- DEM 200 (part of it): Invoke correctly channels shutdown: (75eaa90)
- no issue: Use regular expression to support fail\_on\_error feature (1386d20)

#### Enhancements:

- Improved CI support (e.g. added pylint tests)
- 217: Add option to de-client –print-product to only print the column names in a data block and-or to print one or more records in key/value format. (c4c7681)

#### Full list of commits since version 1.6.1

ddba2a3: Fix duplicate entry warning (#311)

```
c4c7681: Updated de-query-tool w/ cherry pick of fixes from latest version of PR#332
f964d4b: Fixup use of pytest_postgresql for version 3.0.0
635ffd1: Also run pylint for extra sanity checks
11676ff: Fixed function w/ the same name
b8278f6: Add de-query-tool
75eaa90: Merge pull request #335 from shreyb/publisher_shutdown_from_1.6
77e3d79: Added set to shutdown method to TaskManager and accompanying test
1386d20: Merge branch 'knoepfel-fix-fail-on-error' into 1.6
73a18b1: Merge branch 'fix-fail-on-error' of https://github.com/knoepfel/decisionengine into knoepfel-fix-fail-on-
error
4f49fb7: Merge branch 'jcpunk-finish-setuptools' into 1.6
a5e5d39: Merge branch 'finish-setuptools' of https://github.com/jcpunk/decisionengine into jcpunk-finish-setuptools
a1ed252: Merge branch 'vitodb-pylint' into 1.6
c8eddda: Merge branch 'pylint' of https://github.com/vitodb/decisionengine into vitodb-pylint Meerging PR#317 to
release branch 1.6
d7c43b9: Use regular expression to support fail_on_error feature.
ada6692: add support to run pylint tests
efb1e57: Finish migration to pure setuptools
e4dc35e: Merge pull request #314 from jcpunk/jsonnet syntax
87e32c2: Merge pull request #294 from jcpunk/move-reaper
dec85d5: Merge pull request #319 from jcpunk/task-loop
4108472: Merge pull request #320 from jcpunk/container-swig
920af1c: Merge pull request #321 from knoepfel/include-init-files
650dffa: Don't forget init .py files.
1b412e0: The latest m2crypto seems to need swig now
a6e3ab1: Merge pull request #313 from jcpunk/conf-test
1205636: Simplify run loop
de553a7: fix test_client_with_no_server_verbose unit test for Jenkins CI (#315)
30e59dc: fix test_client_with_no_server_verbose unit test for Jenkins CI (#315)
10384a8: Move reaper into its own place and reuse state logic
250c14b: The _validate function doesn't permit missing 'PRODUCES'
5ae1ce9: Make sure syntax error in config names the problem
b899fa2: Add SourceProxy module test. (#307)
7b3df14: Increae coverage of utils (#304)
```

```
915673f: Test modules minimally (#298)
bc0c21a: Some repos may error out, don't let them kill the build (#297)
924a704: doc: add 1.6.1 release notes
b1ab4d3: doc: fix typo
85e5d71: postgresql: do not print stack trace for low level library (#309)
255c641: Setuptools uses entry return value as an error msg (#303)
2fd8db4: Fix name to match expectations (#305)
9cddb70: updated release notes
7fe0358: Error in more clean methods (#300)
84aa506: Fix a bug in setup.py parsing of requirements. (#301)
a58b61b: fix typo in release notes
33660bf: fixed a typo[locuser@fermicloud462 decisionengine]
```

# 1.1.8 Release 1.6.1

Patch level (bug fix) release.

#### Issues fixed in this release

- 306 : /etc/decisionengine/decision\_engine.conf as shipped in RPM is wrong format (de0aef3)
- 275 : Running de-client –stop-channel <channel> results in KeyError (59fb44e)

#### Full list of commits since version 1.6.0

```
d7ccd8a: doc: fix typo
ac48e50: updated release notes
de0aef3: Fix name to match expectations (#305)
59fb44e: postgresql: do not print stack trace for low level library (#309) (#310)
2162bbe: Setuptools uses entry return value as an error msg (#308)
b0fd9fb: 1.6.0 package backports (#302)
```

# 1.1.9 Release 1.6.0

#### In this release:

- The logic engine has been rewritten in pure python. This removes the last C++ dependency the decision engine had. The build system has been updated accordingly.
- Migrated to setuptools package development library. This build system is the standard vanilla python build system
  provided with the python distribution. Build configurations have been updated and rpm packaging remains the
  primary distribution method.
- Completed logging implementation.

- Improvements in error handling and code coverage.
- Improvements in Jenkins and GitHub actions CI/CD pipelines.

#### Issues fixed in this release

- 44 : Logic Engine doesn't handle missing values gracefully (743effc)
- 253: Decision engine can sometimes start up at boot time before network name resolution is working (ae04db5)

#### Full list of commits since version 1.5.0

```
2551e07: More coverage for de-client (#296)
dde3945: Make sure actions either complete in time or die (#295)
381861c: Update Jenkins pipeline configuration (#292)
eb771f4: Try to cleanup Dockerfile PATH issue (#291)
780cb56: fix unittest doc
8680942 : update unittest documentation
8154b24 : Fixup sphinx doc (#290)
5f7e13a: enhancements in logging and error handling in dataspace dir (#283)
3d92725 : Add missing runtime requirement (#286)
743effc: Allow conversion from errors to false values in logic-engine expressions. (#284)
124dcab: Inherit version from setuptools_scm if possible (#287)
3669803: added missing "" as line continuation
761f1d9: Drop invalid init.py
dc0e71b: migrate to setuptools (#264)
3b6f1bf: Make reaper reset state when starting from stopped proc (#280)
b2f9061: added ISO-8601 format to time in logging. changed name of function for better clarity. (#279)
0a74fe1: Improved DE client usage (#281)
ebf53e3: Added shutdown method to Publisher class (#278)
f95ab6d: Address some flake8/black reports (#274)
1c383b7: Automatically pull in our settings from about.py (#273)
e71f186: logging and error handling enhancements to taskmanager directory (#277)
7de9ab9: Increase Reaper log verbosity (#267)
019d245: Update actions to follow new best practices (#272)
b84e847 : Avoid possible sync issues in reaper startup (#271)
891975f: Remove vestigial C++ files. (#270)
42e5e1f: enhancements in logging and exception handling in newly added logicengine files (#265)
38effe6: Ensure the scheduler has started the thread before returning (#269)
db54fa1 : Start testing on PyPy with psycopg2cffi (#223)
```

# decisionengine, Release 2.0.2.dev9+g4f6fc134

cc44058 : Squashed commit of the following: (#263)

d6548e9: Enhanced logging in the logicengine directory files (#261)

c341bf7: Better match our workflow with codecov (#260)

1fbe44d: Use 'new' syntax for forward compat (#259)

2294b0b : Do a limited pin on version requirements (#256)

bcda470: Python implementation of logic engine (#246)

c6721b4: address comment on RB

ae04db5: Add Wants and After (network-online.target) dependency

1a96b14 : Fix action repodata

a70cee8: Move to CodeCov.io

7b16b4e: Add Wants and Requires dependencies (#258)

76c3670: Move to CodeCov.io (#254)

e7ba013: Fix action repodata (#255)

d7e72f2: revert 3.9 test

b04154b: added 1.5.0 release notes

a03da29: remove 3.9 to see if documentatoin gets generated

# 1.1.10 Release 1.5.0

#### In this release:

- Introduce data product query interface
- Cleanup of Ligic Engine code
- Improvements in error handling
- · Improvements in testing and CI

#### Issues fixed in this release

- 217, 218: Add option to de-client –print-product to only print the column names in a data block and-or to print one or more records in key/value format (fe7abcf)
- 240 : Logic Engine call leads to immediate taskmanager segfault exit (d855aa0)
- 239 : implement data product browsing interface (fe9faa9)

#### Full list of commits since version 1.4.1

```
d66c54b: Add PEP-0396 metadata (#243)
bfc91a6: More compat between psycopg2/psycopg2cffi (#248)
f5d31a6: Cleanup Fixture FIXME (#249)
Odfaf3c: Adding docker documentation (#251)
4b166a2 : Since we are python3 only now, drop python-six compat layer (#252)
fe7abcf: Add format support to de-client (#217) (#241)
df5a3d7: Add wheel support for easier testing (#247)
7de970d : Add place to inject env if need be (#242)
84e2930 : Fix race in test case (#250)
d855aa0: Fix fact-lookup to support duplicate names in separate rules. (#245)
51370fb: Resolve fixture 'quickstart' issue (#238)
3ea9129: Move from TravisCI to raw actions (#235)
fe9faa9: implement data product browsing interface (#239)
cf0f3c0: Add support to use custom base docker container to run tests (#234)
d91722f: Compat with psycopg2cffi (#233)
7d15a8c: Test failing source proxy. (#232)
b9a4bbb: Add debug logs for which threads are created #176 (#231)
6e6f4c9: Updated Jenkins configuration documentation (#229)
2d9fd7b: Log if config passed validation #117 (#230)
60c46d3: Self-test needs a real namespace to 'import numpy' in new python eval (#228)
a120077: Test that the doc actually builds during CI (#227)
4b6240a: Extend timeout for coverage combine (#226)
b059696: Update workflow per changes at github (#225)
7a71cac : Use newer compilers/runtimes (#224)
15ffd93: Add header for strict includes (#222)
71b141a: Add special PyPy only requirement (#221)
9dbb932: Move Python C extension to versioned .so file (#220)
ea7ade5: Migrate from boost-python to pybind11 (#215)
e6b2eae: Add python 3.9 to testing matrix (#219)
04c8f9c: Add the option to print columns types on de-client (#216)
8815dc6 : Logic-engine cleanups (#211)
086d0d5: fix missing back tick
54cc084: modified release notes
24744cf: Synchronize access to the task managers (#214)
87a7fda: replde dash with underscore
```

# decisionengine, Release 2.0.2.dev9+g4f6fc134

743d0fd: try sphinx\_rtd\_theme

18c7909: added 1.4.0 release notes

ff3d491: force docker pull when building the docker container to make sure to use an updated base layer (#210)

#### 1.1.11 Release 1.4.1

#### In this release:

• Bug fixes to 1.4.0 release

#### Issues fixed in this release

• 213 : de-client hangs under certain circumstances in version 1.4 and greater (race condition) (84ecfe2)

#### Full list of commits since version 1.4.0

9799b9a: update release version to 1.4.1

84ecfe2: Synchronize access to the task managers (#214)

751b6b8 : Address data races; remove need to sleep in unit tests (#205)

#### 1.1.12 Release 1.4.0

#### In this release:

- Improvements in error handling and client/server interactions
- Added log rotation by time
- Improvements in code coverage

# Issues fixed in this release

- 153: Have de-client –print-product return different error message if product does not exist (18a950c)
- 171: yum update on decision engine rpm from python2 to python3 doesn't undo the symlinks (eb85c97)
- 188 : Channel debug info now leaks into startup.log (99d20a5)
- 208: Error when trying to run reaper in version 1.4.0 (84eccf3)

#### Full list of commits since version 1.3

84eccf3: Fix typo in reaper script. (#209)

d836abf: next RC

926944a: Fix coveralls reporting (#198) b95c323: Updating base Dockerfile (#199)

d302e31: Help jsonnet, which doesn't understand PosixPath objects. (#204)

2d791a7: Test configuration policies. (#197)

```
236e27a: Ensure items are returned in a stable order (#202)
e974f5f: add pylinit and pycodestyle (#203)
fbe7616: Test task manager (#196)
686ca80 : require more recent version of pytest-postgresql (#195)
99d20a5: Fix double-logging problem. (#192)
4ce3d17: A set of fixtures to simplify unit tests (#183)
65f8052 : Fix typo (#190)
f3a4be8: Protect against None workers (#187)
ec310fb: remove py3 from package name
7006489: bump version to 1.4.0rc
158d835 : decisionengine/framework/modules: Fix SourceProxy retries (#184)
1356bf1 : Add support to test any branch in Jenkins (#182)
692fa8e : Add timeout support for unit test on Jenkins (#181)
e3d6e6a: Updated Jenkins documentation to take into account unit tests timeout parametr (#180)
2586a3e: Configuration redesign (#168)
fac984d: Fix error with DBUtils import. Looks like names of modules changed (#175)
7d661ee: Move postgres-specific implementation to postgres source. (#174)
eb85c97: Rpm (#173)
10fe843: Adding log rotation by time (#170)
a8d239b: Various improvements. (#167)
d9b92ee: Ignore vim's *.swp files (#166)
d9f72ef: Fix call to shutdown_timeout (and add sample entry to config) (#165)
3161795 : Add drops for items using tables being dropped (#164)
77d186d: Show output of test runtimes in travis (#163)
81820a4 : Allow server to start with no channels. (#161)
49879a6 : DE server and client usability improvements (#160)
de91c4f: Add tests to default and override config (#158)
14df1f6: Use python fallthrough for options (#159)
ac64a92: Drop python 2.7 integration tests since we are python3 only (#157)
d963301: Update Jenkins pipeline to properly test closing PR (#156)
64248cb: Merge 'runtime' tests into running channel tests (#150)
065ad77 : Adding Jenkins pipeline documentation (#155)
18a950c: fix print-product to report non-existing product as such (#154)
6493735 : Fix invalid attribute name (#152)
d953c6a: Remove unnecessary set start method call (#149)
c8c9b65 : guarantee that process is killed so test never hang (#147)
```

```
f1542b6: Channel test (#146)

7f349a8: Fix faulty TaskManager state type (#145)

d50f1c4: fix logging regression introduced in f5e299969e0611e3480e9fa2782052df... (#142)

becfa26: Pass the correct type. (#144)

1a60daf: DecisionEngine: fix typo (#143)

9e7b867: Updating Jenkins pipeline configuration (#140)

e3a6703: fix regression introduced in f5e299969e0611e3480e9fa2782052df86d7c4ed (#141)

4900bc6: Restore runtime test. (#139)

0823f3d: Consolidate DE server/client tests into one file. (#138)

4f84435: A few more access fixes.

160cfd1: Fix task manager state access.

c00d819: A few more cleanups.

ec087e2: Various cleanups

a309ffe: Improvements to DE client CLI.
```

# 1.1.13 Release 1.3.0

In this release:

- Introduced Jsonnet based configuration system
- · Improved logging
- Improved coverage of datasource

# Full list of commits since version 1.2

```
239e82c: postgresql: improve SQL query (#133)
668eb1f: Update to make the code compatible with both python and JSON based config files (#129)
afd8837: Configuration-manager fixes (#128)
571e2be: Remove pip installed system python packages
407d9ed: Update Dockerfile
1fefc69: Implement unit tests for datablock.py (#122)
43c8d7a: Adjust global configuration to include program-option values. (#126)
2840813: Switch to Jsonnet configuration system (#125)
5c4ae0e: logging changes: added config file and command line interface (#124)
6697f22: Further config-manager testing and factorizations. (#123)
fa89fd0: Insulate multiprocessing test from parent environment. (#120)
139a537: Allow empty base directory for log file. (#119)
f14d40c: Factorize configuration-loading steps. (#118)
e00afee: Enhance testing and error reporting of ConfigManager (#117)
```

```
c3d1be3: Python 3 upgrades. (#116)
e7399af: Header fix (#114)
0456abf: Adding editor config file, see https://editorconfig.org/ (#115)
82112d1: Dockerfile: fetch osg 3.5 repo rpm (#113)
97c21b1: osg version 3.5 (#112)
33f28a8: Introduce jsonnet dependency (#110)
3f8b55e: improve server error handling (#108)
f15588e: added 1.2.0 release notes
b433325: Remove unnecessary 'main' functionality. (#107)
```

#### 1.1.14 Release 1.2.0

#### In this release:

- Swithed to python3
- · Improved coverage
- · Database data retention: added reaper to remove data older than configurable number of days
- · Improved logging

# decisionengine

```
3dfe167: Jenkins pipeline improvements (#106)
22a7073: pull request for review request 137 (#105)
cafffb2: Make it possible to run code directly (for tests), and (#100)
802e98b: replace psycog2 witt psycopg2-binary (#101)
573ce8f: Jenkins pipeline improvements (#99)
9d08835 : Run coveralls even under failed state (#97)
bc1df4b: Add tests for PostgreSQL datasource (#71)
c1ac391: Fix missing py-modules.html (#96)
8dbfdee: Setup gh-pages doc workflow (#94)
cd4a01a : Doc (#93)
673080d: set version to 1.2.0 (for now). Supply conf file that corresponds to (#91)
f912225: Db (#92)
dc8b68a: Add reaper to the RPC (#83) (#90)
29ade91: adding .Jenkinsfile with Jenkins pipeline configuration (#86)
c1dfe5c: Don't exclude E1004 from pylint, do exclude line breaks (#89)
440f949 : Fix varname (#88)
313d135 : Compress (#87)
6b8dc4b: Revert "Add reaper to the RPC (#83)"
```

```
dbea8e5: Update utils.sh so pytest will complete.
e848316: Update to postgresq111
7f4b805: Add reaper to the RPC (#83)
0ba2c51: remove astpp module and depedencies it pulls in (#81)
6b8eab9: don't track test coverage of tests (#80)
Oda18ec: made reaper.py executable
aca24a3: make reaper.py executable, make symbolic link to it from /usr/bin (#72)
0202acf: Implementation of data reaper (#70)
16b6be1: Simple changes for Python 3 deployment (#69)
fd2418c: Fix warnings caught by PEP-8 Speaks.
d16359b: Python 3 (and other) simplications.

13773ee: address pep8 warnings
6bea4ca: silence pylint error
```

```
f589895 : Pass sort=True parameter to fix future warning (#215)
```

a1d0507: fixing pep8 warning

a10bd17: debugging one import error ec501ad: make coveralls.io links work

deab1a7: T201 (#204)

69f2645: Add coveragerc

6d8a5f5: decisionengine\_modules/NERSC: Make Nersc API call backward-compatible with old config (#196)

a7e0af9: Only run Github Actions for python3.6 (#24)

# 1.1.15 Release 1.1.0

#### In this release:

- Fixed. https://github.com/HEPCloud/decisionengine\_modules/issues/108 "Supply Postgres script to delete fields in main database before a certain date"
- significant code cleanup and pep8 compliance
- · unit test work
- CI (GitHub actions and Travis) is introduced

#### commits

f894b1d: Skip unittest (#77)

632e64b: Add ipython

f681a79: Make python 2.7 tests run on 1.1 branch

d6a32c0: implementation of data reaper (#75)

2ad8614: Use sparse checkout for first checkout to get .github/actions (#65)

812f032: Cat output of pytest log Exit pylint entrypoint with the line count of pep8 and pylint logs Deal with (detach

from ...) Only tar up (S)RPMS dirs for rpm build.

6b05ec7: Fix errors reported by run pylint (#62)

d9f5b66: Setup pep8speaks

c3b8ac2 : Run github actions as non-root uid. Install packages in virtualenv and remove system rpms.

ae01f9e: Support Python 3 for Boost Python

579761c : Support Python 3 for Boost Python

044b979: Remove unnecessary using declarations.

00f6d00: Add extra header dependency due to Boost Python ommission.

24e0795 : Apply clang-format

17c17f9: Remove JSON dependency.

faa0b22: Massive cleanup.

07b555f: Updates to Github Actions to allow building with python3.6

fef6c11: Fix errors when running pylint.sh multiple times

da6f077: Autopep8 -i fixes

```
39fe5b3: TaskManager: fix calling log_exception with correct number of arguments and minor format changes to
reduce PEP8 warnings
17396da: logicengine: get rid of compuler warnings
01dc3d1: Only track what we need
b609d73: Configure coveralls (and some minor cleanup)
bd9ed5e: Many C++ cleanups
2a61876: Add Badges
c864f27: Do not call pytest fixtures directly.
307db5f: white space fix
882b58f: fix unit tests
1da687c: Replace Boost facilities with C++ STL ones.
5a6e6b1: Run tests on push
8404245 : Add missing Boost regex library dependency.
ceb5fe7: Apply clang-format to files that were missed earlier.
3de9940 : Apply clang-format to C++ code.
8a8f560: Cache venv directory instead
ad017ce: Build private boost for testing
928c64a: Test pip cache
358939a: Adjust CMakeLists.txt files to use correct Python versions
9f0ddb3: Add pylint github action.
5e6ce4a: Remove more unused C++ files.
63717fe: Setup travis to use new cmake var
74fab2a: Use cmake argumement -DPYVER=3.6 to build python3 library https://fermicloud140.fnal.gov/reviews/r/
31/
843f30c: Minor cleanups per travis-lint
a538cac: Remove unused C++ files.
4c9d125: Update repo where action is taken from
87fb2d9: Update rpms installed in docker image. Update entrypoint.sh to use cmake3.
199ee87: Find python3 libraries using cmake3 from epel rpm Also need to install python3-devel
4c79d2c: Remove unnused GNUmakefiles.
94342ee: Add unit test as a Github Action
1a0e102: more advanced travis.yml
0be413f: Add helper file for pip
7794327: Make recursive import happy
7005c78: Add simple target
de8b0fa: python3 compliance: replace string.join() where appropriate, handle UserDict
2662e6c: note required packages
```

3b87119: Add missing header includes.

3e79b84: Remove defunct code and its tests

b1dbe1a: Ensure attribs are defined at init

c4ad78a: Correct logger arguments do avoid duplicate string parse

a8dcc67: Remove unused imports (per pylint)

d3502b5: Remove obsolete CVS directories.

d744111: add six module to the list of required modules

0a9b1e8: Fix class declaration

b83157e: Handle metaclasses

549f33b : Add config for Travis CI

ee71044: Drop trailing white space

3f82af6: Python3 forward compatible syntax

28bf291: Add safe (for python 2.7) python3 compatible syntax

1d1d76f: prepare for python3

**CHAPTER** 

**TWO** 

# **INSTALL DECISION ENGINE**

Here are instructions for operators and developers to install the Decision Engine using the distributed RPM packages.

# 2.1 Installing and running HEPCloud's Decision Engine

Decision engine uses a PostgreSQL database back-end and Redis as message broker and cache.

You need to install first PostgreSQL, Redis, and then the Decision engine framework (decisionengine) and install and add the standard channels (decisionengine\_modules).

The following instructions assume a system installation, performed as root. decisionengine will run as the decisionengine user.

# 2.1.1 Install PostgreSQL

The default postgresql installed on RH7 is 9.2 which is outdated. Suggest to remove it and install 12 instead :

1. Remove old postgresql

```
yum erase -y postgresql*
```

2. Install postgresql 12

```
yum install -y https://download.postgresql.org/pub/repos/yum/reporpms/EL-7-x86_64/

→pgdg-redhat-repo-latest.noarch.rpm

yum install -y postgresql12 postgresql12-server

# optional, also: postgresql11-devel
```

3. Enable postgresql

```
systemctl enable postgresql-12
```

4. Init the database

```
/usr/pgsql-12/bin/postgresql-12-setup initdb
```

5. edit /var/lib/pgsql/12/data/pg\_hba.conf like the following:

```
[root@fermicloud371 ~]# diff /var/lib/pgsql/12/data/pg_hba.conf~ /var/lib/pgsql/12/

→data/pg_hba.conf

80c80
```

-	1	C		\ \
(	continued	rrom	previous	nagei

				1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1
< local	all	all		peer
> local 82c82	all	all		trust
< host	all	all	127.0.0.1/32	ident
> host	all	all	127.0.0.1/32	trust
84c84 < host	all	all	::1/128	ident
> host	all	all	::1/128	trust

This is setting the authentication method to trust

6. start the database

```
systemctl start postgresql-12
```

7. create decisionengine

```
createdb -U postgres decisionengine
```

The schema and the connection will be created and configured during the Decision engine framework installation.

To use the database you have to add it to the environment:

```
export PG_VERSION=12
export PATH="/usr/pgsql-${PG_VERSION}/bin:~/.local/bin:$PATH"
```

# 2.1.2 Install Redis

Install and start the message broker (Redis) as explained in the redis document

# 2.1.3 Install Decision Engine and the standard modules

1. Prerequisites setup. Make sure that the required yum repositories and some required packages (python3, gcc, ...) are installed and up to date.

```
yum install -y http://ftp.scientificlinux.org/linux/scientific/7x/repos/x86_64/yum-
→conf-softwarecollections-2.0-1.el7.noarch.rpm

yum install -y https://dl.fedoraproject.org/pub/epel/epel-release-latest-7.noarch.
→rpm

# gcc, swig and make are needed for dependencies (jsonnet)

yum -y install python3 python3-pip python3-setuptools python3-wheel \
    gcc gcc-c++ make \
    python3-devel swig openssl-devel git rpm-build

python3 -m pip install --upgrade --user pip

python3 -m pip install --upgrade --user setuptools wheel setuptools-scm[toml]

# To install the modules you will also need GlideinWMS Frontend, which is in the →OSG repository.
```

(continued from previous page)

```
# Assuming the use of OSG 3.5 that supports both GSI and tokens, here is a brief_
__summary of the setup:
yum install -y yum-priorities
yum install -y https://repo.opensciencegrid.org/osg/3.5/osg-3.5-el7-release-latest.

¬rpm
# HTCondor 8.9.x or 9.x, required by GlideinWMS, is in the osg-upcoming repository.

¬It should be enabled to find the dependency
# GlideinWMS 3.9.x is in osg-contrib. The repository should be enabled to find the.

¬dependency
# In both the following files set: enabled=1
vi /etc/yum.repos.d/osg-upcoming.repo
vi /etc/yum.repos.d/osg-contrib.repo
# Change the Epel repository priority to make sure that comes after the OSG_
¬repositories, which are 98. Make sure that epel has:
priority=99
vi /etc/yum.repos.d/epel.repo
```

The complete version of the GlideinWMS installation instructions is available here

2. Setup the decision engine yum repositories

3. Install the decision engine (add --enablerepo=ssi-hepcloud-dev for the latest development version)

```
yum install decisionengine
yum install decisionengine_modules
```

4. Not all packages are available as RPM. It is necessary to install directly some Python dependencies. To avoid to pollute the system Python we will install them for the decisionengine user, the user the service is running as. Install the required Python packages (these are taken from setup.py)

```
su decisionengine -s /bin/bash
python3 -m pip install --upgrade pip setuptools wheel --user
python3 /path/to/decisionengine/setup.py develop --user
python3 /path/to/decisionengine/setup.py develop --user --uninstall
python3 /path/to/decisionengine_modules/setup.py develop --user
python3 /path/to/decisionengine_modules/setup.py develop --user --uninstall
exit
```

The commands above should be sufficient. Anyway, here is an explicit list you can use in alternative:

```
su decisionengine -s /bin/bash
# from decisionengine setup.py

python3 -m pip install --user jsonnet==0.17.0 tabulate toposort structlog

python3 -m pip install --user wheel DBUtils sqlalchemy

python3 -m pip install --user pandas==1.1.5 numpy==1.19.5

python3 -m pip install --user "psycopg2-binary >= 2.8.6; platform_python_

implementation == 'CPython'"

python3 -m pip install --user "psycopg2cffi >= 2.9.0; platform_python_
```

(continued from previous page)

```
→implementation == 'PyPy'"
python3 -m pip install --user "cherrypy>=18.6.0" "kombu[redis]>=5.2.0rc1"
→"prometheus-client>=0.10.0"
python3 -m pip install --user "psutil>=5.8.0" "typing_extensions==4.1.1"
# from decisionengine_modules setup.py
python3 -m pip install --user boto3 google-api-python-client
python3 -m pip install --user "google_auth<2dev,>=1.16.0" "urllib3>=1.26.2"
python3 -m pip install --user gcs-oauth2-boto-plugin
# Condor should be already there from the RPM, if not add: python3 -m pip install.
\rightarrowhtcondor
python3 -m pip install --user bill-calculator-hep
# The following are additional requirements for v1.6 and earlier
python3 -m pip install --user boto packaging
# This is not in pypi
python3 -m pip install --user https://test-files.pythonhosted.org/packages/f4/a5/
-17a14b4ef85bc412a0ddb771771de3f562430328b0d83da6091a4131bb26/bill_calculator_hep_
→mapsacosta-0.0.10-py3-none-any.whl
exit
```

Now you can type decisionengine --help to print the help message. To do more you need first to configure Decision Engine.

# 2.1.4 Configure Decision Engine

The default configuration file lives in /etc/decisionengine/decision\_engine.jsonnet.

A number of defaults are set for you.

#### Selecting your datasource

You need a datasource to store in the database the channel's data (datablocks). Each datasource has its own unique schema and cannot be used with a different datasource.

# The SQLAlchemy Data Source

SQLAlchemy is the default Data Source after v1.7 and is setup with a configuration like:

```
"datasource": {
   "module": "decisionengine.framework.dataspace.datasources.sqlalchemy_ds",
   "name": "SQLAlchemyDS",
   "config": {
       "url": "postgresql://{db_user}:{db_password}@{db_host}:{db_port}/{db_dbname}",
       }
    }
}
```

Any extra keywords you can pass to the sqlalchemy.engine.Engine constructor may be set under config.

SQLAlchemy will create any tablespace objects it requires automatically.

# The PostgreSQL Data Source

The postgresql Data Source is the only one supported pre v1.7 and is setup with a config like:

```
"datasource": {
    "module": "decisionengine.framework.dataspace.datasources.postgresql",
    "name": "Postgresql",
    "config": {
        "user": "postgres",
        "blocking": true,
        "host": "localhost",
        "port": 5432,
        "database": "decisionengine",
        "maxconnections": 100,
        "maxcached": 10
        }
    }
}
```

If you use this datasource you must also load the database schema by hand. To load the database schema run:

# 2.1.5 Start decision engine

Start the service

```
systemctl start decisionengine
```

# 2.1.6 Add channels to decision engine

Decision engine decision cycles happen in channels. You can add channels by adding configuration files in /etc/decisionengine/config.d/ and restarting the decision engine.

Here is a simple test channel configuration. This test channel is using some NOP classes currently defined in the unit tests and not distributed. First, copy these classes from the Git repository:

```
cd YOUR_decisionengine_REPO

# OR download the files from GitHub

mkdir /tmp/derepo

cd /tmp/derepo

wget https://github.com/HEPCloud/decisionengine/archive/refs/heads/master.zip

unzip master.zip

cd decisionengine-master

# Now copy the files

cp -r src/decisionengine/framework/tests /lib/python3.6/site-packages/decisionengine/

framework/
```

Then, add the channel by placing this in /etc/decisionengine/config.d/test\_channel.jsonnet:

```
{
   sources: {
    source1: {
       module: "decisionengine.framework.tests.SourceNOP",
       parameters: {},
```

(continued from previous page)

```
schedule: 1,
    }
  },
  transforms: {
    transform1: {
      module: "decisionengine.framework.tests.TransformNOP",
      parameters: {},
      schedule: 1
    }
  },
  logicengines: {
    le1: {
      module: "decisionengine.framework.logicengine.LogicEngine",
      parameters: {
        facts: {
          pass_all: "True"
        rules: {
          r1: {
            expression: 'pass_all',
            actions: ['publisher1']
        }
      }
    }
  },
  publishers: {
    publisher1: {
      module: "decisionengine.framework.tests.PublisherNOP",
      parameters: {}
    }
 }
}
```

Finally, restart decision engine to start the new channel:

```
systemctl restart decisionengine
```

de-client --status should show the active test channel

# 2.1.7 Setup pressure-based pilot submission

At this point Decision Engine, GlideinWMS and HTCondor are supposed to be installed and able to run. We assume that the Frontend proxy and the VO proxy are already available.

Decision Engine configuration templates referred in this section are available in the contrib repo.

Files from decisionengine folder need to be copied inside /etc/decisionengine. Those configuration files have the placeholder field @CHANGEME@ that needs to be replaced with a proper parameter according to the specific system setup.

Once those configuration file have been updated, we are ready to finalize the Decision Engine configuration.

#### - Setup Redis

Start the message broker (Redis) as pod container:

```
podman run --name decisionengine-redis -p 127.0.0.1:6379:6379 -d redis:6 --loglevel.

⇔warning
```

- Create GWMS frontend configuration For this step it is needed to run:

```
chown -R decisionengine: /var/lib/gwms-frontend
systemctl start decisionengine
ksu decisionengine -e /usr/bin/python3 /usr/lib/python3.6/site-packages/decisionengine_

modules/glideinwms/configure_gwms_frontend.py
```

This command will create the file /var/lib/gwms-frontend/vofrontend/de\_frontend\_config

At this point it is needed to stop decisionengine service and remove the Redis container:

```
systemctl stop decisionengine
podman stop decisionengine-redis | xargs podman rm
```

Now all should be ready to run Decision Engine.

# - Run Decision Engine

The procedure to run Decision Engine is as follow:

• Reset decisionengine DB:

```
dropdb -U postgres decisionengine
createdb -U postgres decisionengine
```

• Run Redis container:

```
podman run --name decisionengine-redis -p 127.0.0.1:6379:6379 -d redis:6 --loglevel →warning
```

• Start decisionengine service and check its status:

```
systemctl start decisionengine
sleep 5
systemctl status decisionengine
```

### - Submit a test job

• Switch to decisionengine user and make sure channel and sources are STEADY:

ksu decisionengine -e /bin/bash de-client -status

• prepare a Condor submission file mytest.submit with the following content:

```
# A test Condor submission file - mytest.submit
executable = /bin/hostname
universe = vanilla
+DESIRED_Sites = "@CHANGEME@"
log = test.log
output = test.out.$(Cluster).$(Process)
```

(continued from previous page)

```
error = test.err.$(Cluster).$(Process)
queue 1
```

• submit the test job:

```
condor_submit mytest.submit
```

• check jobs in the queue:

```
condor_q
```

• check for available glideins:

```
condor_status
```

after test jobs are submitted it will take few minutes (usually no more than 10 minutes) to get some glideins and then get the job running.

Now the decisionengine user session can be closed to get back to the root session.

# - Stop Decision Engine service

Finally stop Decision Engine service and remove the Redis container:

```
systemctl stop decisionengine.service
podman stop decisionengine-redis | xargs podman rm
```

**CHAPTER** 

**THREE** 

# **DEVELOPER DOCUMENTATION**

The developer documentation is in the GitHub Wiki

Intructions to build the package, or to run unit tests and other CI tests, and to install decisionengine are in the GitHub Wiki as well.

**CHAPTER** 

**FOUR** 

# **JENKINS CI PIPELINE**

# 4.1 Decisionengine CI with Jenkins pipeline

Jenkins dashboard with Decisionengine framework CI results is available here.

A CI build is triggered any time a PR is created/closed or a commit is made to an existing PR. There are also *nightly CI builds* to test a list of predefined branches.

The Jenkins pipeline runs *pylint* and *unit\_tests* test suites alongside the *rpmbuild* stage.

The Jenkins dashboard looks like this:

On the bottom left side there is the list of recent CI builds that are named after the PR or the branch tested. On the bottom right side the dashboard shows for each CI build detailed status for each test suite.

Hovering the mouse over the status box for each CI build stage, a tool-tip with a button to access log details shows up.

Next to the build number the symbol <sup>1</sup> gives access to a menu with the list of artifacts stored for that build. Those artifacts include logs and the tarball with RPMs.

From the panel on the left side it is possible to access the PR on GitHub by clicking on the PR icon that looks like this 1.4142.

On occasion it could be useful to trigger a manual CI build to test a branch on the official DE GitHub repository or on

the user fork. For this purpose, on the top left panel the user can click on the Build with Parameters button, and this panel shows up

# Pipeline decisionengine\_pipeline

This build requires parameters:

the user can modify these parameters to customize what code to test with the CI build.

The *DE\_REPO* parameter can point to the user fork or to the main repository.

The BRANCH parameter can point to the desired branch to test.

The PYTEST\_TIMEOUT parameter is the timeout in seconds for unit\_tests.

When ready, by clicking on the Build button, the CI build will start.

The pipeline configuration is part of the decisionengine repo.

# 4.1.1 Nightly CI build configuration

The nightly CI build for Decisionengine framework uses this Jenkins project that triggers a CI build using the Jenkins pipeline described above to test a list of predefined branches.

Branches to test are defined using the project matrix as shown in the picture below. Each branch in the list (here *master* and *1.4*) spawns an independent CI build.

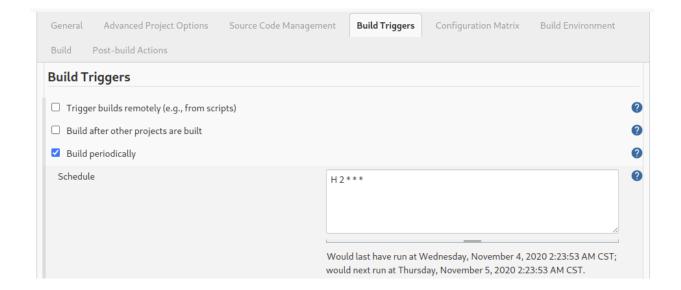

In the *Build* section of the configuration it is set the list of Jenkins subprojects to be triggered, in this case we have *decisionengine\_pipeline* and *decisionengine\_modules\_pipeline*.

The *Parameters* text box is used to override parameters of each Jenkins subproject with a custom value. In total this Jenkins project triggers 4 CI builds, i.e. 2 branches X 2 Jenkins subprojects.

Finally the *Build Triggers* section is used to setup the schedule for the periodic build, in this case it is scheduled to run at about 2 AM.

Jenkins will choose the actual time depending on the actual load on the system.

# decisionengine.framework.config.ChannelConfigHandler module

Manager of channel configurations.

The ChannelConfigHandler manages only channel configurations and not the global decision-engine configuration. It is responsible for loading channel configuration files and validating that the channels have the correct configuration artifacts.

```
Bases: object
_load_channel(channel_name, path)
get_channels()
load_all_channels()
Load all channel configurations inside t
```

Load all channel configurations inside the stored channel-configuration directory.

Any cached configurations will be dropped prior to reloading.

```
load_channel(channel_name)
```

Load a single configuration for a channel with the supplied name.

The behavior is to read a configuration file whose path is:

```
<cached channel config. dir>/{channel_name}.jsonnet
```

where the cached channel-configuration directory was stored whenever the ChannelConfigHandler object was created, and {channel\_name} is the value of the supplied method argument.

```
print_channel_config(channel)
```

# decisionengine.framework.config.ValidConfig module

ValidConfig represents a valid JSON document.

The decision engine requires each of its configuration files to be valid JSON. This is achieved by either supplying a valid Jsonnet or JSON document upfront.

Vetting of a file for JSON validity happens upon construction of a 'ValidConfig' object. A fully constructed 'Valid-Config' object thus corresponds to a valid JSON document.

**class** decisionengine.framework.config.ValidConfig.ValidConfig(filename, jpathdirs=None)

Bases: UserDict

ValidConfig represents a valid JSON configuration in the form of a dictionary.

In addition to the normal dictionary operations, users may call 'dump()' to print out in a string form the JSON configuration.

```
_abc_imp1 = <_abc._abc_data object>
dump()
```

Print dictionary data to a valid JSON string.

decisionengine.framework.config.ValidConfig.\_config\_from\_file(config\_file, jpaths=None)

# decisionengine.framework.config.policies module

Decision-engine default configuration policies.

For the decision-engine process, the configuration policies are:

- The global configuration file must be named 'decision\_engine.jsonnet' and it must reside in (a) a directory that can be accessed through the 'CONFIG\_PATH' environment variable, or (b) the /etc/decisionengine directory.
- All channel configurations must reside in (a) a directory accessible through the 'CHANNEL\_CONFIG\_PATH' environment variable, or (b) a 'config.d' subdirectory of the /etc/decisionengine directory.

The utilities provided in this module provide simple means of accessing the configuration artifacts according to the policies listed above. Please consult the documentation for each function below for more detailed information.

decisionengine.framework.config.policies.channel\_config\_dir(parent\_dir=None)

Retrieve the channel configuration directory as a pathlib.Path object.

This function returns a path object according to the following precedence rules:

- 1. If the 'parent\_dir' argument is provided, the returned path object will correspond to '{parent\_dir}/config.d'.
- 2. If the 'CHANNEL\_CONFIG\_PATH' environment variable has been set, the returned path object will correspond to \${CHANNEL\_CONFIG\_PATH}.
- 3. If neither 1 or 2 apply, the returned path object corresponds to '{global\_config\_dir()}/config.d' (see documentation for 'global\_config\_dir()').

Regardless of the precedence rule used, the returned path object must be a valid directory or an exception will be raised—i.e. if the 'parent\_dir' argument is supplied, and the resulting path object is not a valid directory, the function will exit with an exception and not attempt rule 2 or 3.

decisionengine.framework.config.policies.global\_config\_dir()

Retrieve global configuration dir as pathlib.Path object.

This is the directory that houses the 'decision\_engine.jsonnet' global configuration file.

This function checks that the 'CONFIG\_PATH' variable has been set or will use /etc/decisionengine otherwise. If the path exists as a directory, then the directory path is returned as a string; otherwise an exception is raised.

decisionengine.framework.config.policies.global\_config\_file(parent\_dir=None)

Return the pathlib.Path object corresponding to the global configuration.

If supplied, the 'parent\_dir' is assumed to be the full path corresponding to a directory containing the 'decision\_engine.jsonnet' file. If not provided, the global configuration directory is determined based on the behavior of the 'global\_config\_dir()' function.

An exception is raised if no 'decision\_engine.jsonnet' file is found.

decisionengine.framework.config.policies.valid\_dir(path, scope)

Throws if the supplied path object is not a directory, otherwise returns the path object.

#### close()

Close all connections to the database

### **Returns**

None

# connect()

Create a pool of database connections

# Returns

None

# create\_tables()

Create database tables

#### Returns

None

# delete\_data\_older\_than(days)

Delete data older that interval

#### **Parameters**

days (int) - remove data older than this many days

# Returns

None

# duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to clone
- $new\_generation\_id(int)$  generation id to create

#### **Returns**

None

# get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

# **Parameters**

• taskmanager\_id (str/uuid) – id of taskmanager to retrieve

• **generation\_id** (*int*) – generation id to locate

#### Returns

with all set keys and their associated values

# Return type

dict

# get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager id, generation id, key

#### **Parameters**

- **taskmanager\_id** (*str/uuid*) id of taskmanager to retrieve
- **generation\_id** (int) generation id to locate
- **key** (*str*) key for the value

#### **Returns**

The possibly binary value stored earlier

# Return type

obj

# get\_dataproducts(taskmanager\_id, key=None)

Return list of all data products associated with with taskmanager\_id

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **key** (*str*) key for the value

# Returns

each element is the matching row as a dict()

# Return type

tuple

# get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate
- **key** (str) key for the value

# Returns

# fields in order are:

taskmanager\_taskmanager\_id, header.taskmanager\_id, header.generation\_id, header.key, header.create\_time, header.expiration\_time, header.scheduled\_create\_time, header.creator, header.schema\_id

# Return type

tuple

# $\verb"get_last_generation_id" (\textit{taskmanager}_n \textit{ame}, \textit{taskmanager}_i \textit{d} = None)$

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

- $taskmanager_name(str)$  name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

### Returns

the largest generation stored within the database

# **Return type**

int

# get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate
- $\mathbf{key}$  (str) key for the value

# Returns

# fields in order are:

taskmanager\_taskmanager\_id, metadata.taskmanager\_id, metadata.generation\_id, metadata.key, metadata.state, metadata.generation\_time, metadata.missed\_update\_count

# Return type

tuple

# get\_schema(table=None)

Given the table name return it's schema

# get\_taskmanager(taskmanager\_name, taskmanager\_id=None)

Find the task manager by name/uuid in the database get back the primary key.

If multiples match, find highest primary key.

# **Parameters**

- **taskmanager\_name** (*str*) name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

#### **Returns**

the matching row, column names as keys

#### **Return type**

dict

# get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Find taskmanagers that meet our search

### **Parameters**

- **taskmanager\_name** (*str*) name of taskmanager to retrieve
- **start\_time** (*datetime*) Datetime to confine against
- end\_time (datetime) Datetime to confine against

#### Returns

each element is a dict() matching row, column names as keys

# Return type

list

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to create
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

#### **Returns**

None

# reset\_connections()

Reset the connection to the database. So long as self.engine isn't undef, the engine can still make new connections if new db actions happen. It just wont have any open at this time.

#### Returns

None

store\_taskmanager(name, taskmanager\_id, datestamp=None)

Store TaskManager in database

#### **Parameters**

- name (str) name of taskmanager to retrieve
- **taskmanager\_id** (*str/uuid*) id of taskmanager to retrieve
- datestamp (datetime) datetime of created object, defaults to 'now'

#### **Returns**

the primary key of the row in the database

#### **Return type**

int

update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- generation\_id (int) generation id to update
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

# Returns

None

#### Module contents

Top level import so we can rationally segment items of the ORM

class decisionengine.framework.dataspace.datasources.sqlalchemy\_ds.SQLAlchemyDS(config\_dict)

Bases: DataSource

A DecisionEngine data source via the SQL Alchemy ORM

Exceptions should be caught and logged by the caller.

```
_abc_impl = <_abc._abc_data object>
close()
    Close all connections to the database
    Returns
    None
```

connect()

Create a pool of database connections

Returns None

#### create\_tables()

Create database tables

#### Returns

None

# delete\_data\_older\_than(days)

Delete data older that interval

#### **Parameters**

days (int) – remove data older than this many days

#### **Returns**

None

# duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to clone
- **new\_generation\_id** (*int*) generation id to create

#### Returns

None

# get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

# **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (int) generation id to locate

#### Returns

with all set keys and their associated values

# Return type

dict

# ${\tt get\_dataproduct}(\textit{taskmanager\_id}, \textit{generation\_id}, \textit{key})$

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

# **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (int) generation id to locate
- $\mathbf{key}$  ( $\mathbf{str}$ ) key for the value

#### **Returns**

The possibly binary value stored earlier

# Return type

obj

# get\_dataproducts(taskmanager\_id, key=None)

Return list of all data products associated with with taskmanager\_id

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- $\mathbf{key}$  ( $\mathbf{str}$ ) key for the value

#### Returns

each element is the matching row as a dict()

#### **Return type**

tuple

# get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate
- $\mathbf{key}$  (str) key for the value

#### Returns

#### fields in order are:

taskmanager\_taskmanager\_id, header.taskmanager\_id, header.generation\_id, header.key, header.create\_time, header.expiration\_time, header.scheduled\_create\_time, header.creator, header.schema id

# Return type

tuple

# get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

- $taskmanager_name(str)$  name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

#### Returns

the largest generation stored within the database

#### Return type

int

# get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate
- **key** (*str*) key for the value

# Returns

#### fields in order are:

taskmanager\_id, metadata.taskmanager\_id, metadata.generation\_id, metadata.key, metadata.state, metadata.generation\_time, metadata.missed\_update\_count

# **Return type**

tuple

#### get\_schema(table=None)

Given the table name return it's schema

# get\_taskmanager\_id=None)

Find the task manager by name/uuid in the database get back the primary key.

If multiples match, find highest primary key.

#### **Parameters**

- **taskmanager\_name** (*str*) name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

#### Returns

the matching row, column names as keys

# Return type

dict

### get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Find taskmanagers that meet our search

#### **Parameters**

- **taskmanager\_name** (*str*) name of taskmanager to retrieve
- **start\_time** (*datetime*) Datetime to confine against
- end\_time (datetime) Datetime to confine against

#### Returns

each element is a dict() matching row, column names as keys

#### Return type

list

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to create
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

# Returns

None

#### reset\_connections()

Reset the connection to the database. So long as self.engine isn't undef, the engine can still make new connections if new db actions happen. It just wont have any open at this time.

#### Returns

None

store\_taskmanager(name, taskmanager\_id, datestamp=None)

Store TaskManager in database

### **Parameters**

- name (str) name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- datestamp (datetime) datetime of created object, defaults to 'now'

#### **Returns**

the primary key of the row in the database

# **Return type**

int

update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to update
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

# Returns

None

# decisionengine.framework.dataspace.datasources.tests package

### **Submodules**

#### decisionengine.framework.dataspace.datasources.tests.fixtures module

pytest fixtures/constants

decisionengine.framework.dataspace.datasources.tests.fixtures.PG\_DB\_WITHOUT\_SCHEMA(request:

FixtureRequest) →

connection

Fixture factory for PostgreSQL.

#### **Parameters**

request - fixture request object

#### Returns

postgresql client

decisionengine.framework.dataspace.datasources.tests.fixtures.**PG\_PROG**(request: FixtureRequest, tmp\_path\_factory:

*Imp\_pain\_jactory: TempPathFactory*) →
Iterator[PostgreSQLExecutor]

Process fixture for PostgreSQL.

#### **Parameters**

- **request** fixture request object
- **tmp\_path\_factory** temporary path object (fixture)

#### Returns

tcp executor

decisionengine.framework.dataspace.datasources.tests.fixtures.SQLALCHEMY\_PG\_WITH\_SCHEMA(PG\_DE\_DB\_WITH Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

 ${\tt decisionengine.framework.dataspace.datasources.tests.fixtures. \textbf{SQLALCHEMY\_TEMPFILE\_SQLITE}(\textit{tmp\_path})}$ 

Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.dataspace.datasources.tests.fixtures.datasource(request)

This parameterized fixture will setup up various datasources.

Add datasource objects to DATASOURCES\_TO\_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.datasources.tests.fixtures.mock\_data\_block()

This fixture replaces the standard datablock implementation.

The current DataBlock implementation does not own any data products but forwards them immediately to a backend datasource. The only implemented datasource requires Postgres, which is overkill when needing to test simple data-product communication between modules.

This mock datablock class directly owns the data products, thus avoiding the need for a datasource backend. It is anticipated that a future design of the DataBlock will own the data products, thus making this mock class unnecessary.

# decisionengine.framework.dataspace.datasources.tests.test datasource api module

This test plan covers a generic dataspace object via pytest parameters.

decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_create\_tables(datasource) create\_tables() should be safe to call multiple times

decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_delete\_data\_older\_than\_ar

Can we delete old entries

- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_duplicate\_datablock(dataso Can we duplicate taskmanager1 and all its entries
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_datablock(datasource)
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproduct(datasource)

  Can we get the dataproduct by uuid with key
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproduct\_not\_exist

  Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproducts(datasource)

  Can we get the dataproducts by uuid and uuid with key

decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproducts\_not\_exis

- Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_header(datasource)

  Can we fetch a header?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).dataset\_datasource\_api.test\_get\_header\_not\_exist(dataset\_datasource).dataset\_dataset\_datasource\_api.test\_get\_header\_not\_exist(dataset\_dat
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_last\_generation\_id(dataspace).dataspace.datasource\_api.test\_get\_last\_generation\_id(dataspace).dataspace.

decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_last\_generation\_id\_no

- Does it error out if we ask for a bogus taskmanager?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_metadata(datasource)

  Can we fetch a metadata element?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanager\_exists(datasource\_api test\_get\_taskmanager\_exists).
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanager\_not\_exist
  This should error out
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanagers(datasource)

  Can I get multimple task managers
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanagers\_not\_exis

  Do I error out when asking for garbage
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_has\_config(datasource)

  This should have a config dict we can pass to jsonnet
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_insert(datasource)

  Can we insert new elements
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_reset\_connections(datasource reset\_connections() should be safe to call any time
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_store\_taskmanager(datasource\_api.test\_store\_taskmanager(datasource\_api.test\_store\_taskmanager)

decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_update(datasource)

Do updates work as expected

 ${\tt decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_update\_bad({\it datasource})}$ 

Do updates fail to work on bogus taskmanager as expected

#### Module contents

#### **Submodules**

# decisionengine.framework.dataspace.datasources.null module

class decisionengine.framework.dataspace.datasources.null.NullDataSource(config\_dict)

Bases: DataSource

Implementation of data source ABC that does nothing

```
_abc_impl = <_abc._abc_data object>
```

close()

Close all connections to the database

connect()

Create a pool of database connections

create\_tables()

Create database tables

delete\_data\_older\_than(days)

Delete data older that interval :type days: long :arg days: remove data older than interval

duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- new\_generation\_id (int) generation\_id of the new datablock created

get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data

get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data

• **key** (string) – key for the value

## get\_dataproducts(taskmanager\_id, key=None)

Return list of all data products associated with with taskmanager\_id

#### **Parameters**

key (string) – data product key

## get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager id, generation id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value

## get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

- taskmanager\_name (string) task manager name
- taskmanager\_id (string) task manager id

## get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

### get\_schema(table=None)

Given the table name return it's schema

## **Parameters**

table (string) - Name of the table

# get\_taskmanager(taskmanager\_name, taskmanager\_id=None)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

### get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Retrieve TaskManagers :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict

- header (Header) Header for the value
- **header** Metadata for the value

#### reset\_connections()

Drop any cached connections and reconnect to the database

```
store_taskmanager(name, taskmanager_id, datestamp=None)
```

Store TaskManager:type taskmanager\_name: string:arg taskmanager\_name: name of taskmanager to retrieve:type taskmanager\_id: string:arg taskmanager\_id: id of taskmanager to retrieve:type datestamp: datetime:arg datestamp: datetime of created object, defaults to 'now'

update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- **header** (Header) Header for the value
- header Metadata for the value

## decisionengine.framework.dataspace.tests package

## **Submodules**

## decisionengine.framework.dataspace.tests.fixtures module

decisionengine.framework.dataspace.tests.fixtures.PG\_DB\_WITHOUT\_SCHEMA(request:

 $FixtureRequest) \rightarrow$  connection

Fixture factory for PostgreSQL.

### **Parameters**

request – fixture request object

#### Returns

postgresql client

decisionengine.framework.dataspace.tests.fixtures.PG\_PROG(request: FixtureRequest,

tmp\_path\_factory: TempPathFactory) →
Iterator[PostgreSQLExecutor]

Process fixture for PostgreSQL.

#### **Parameters**

- request fixture request object
- tmp\_path\_factory temporary path object (fixture)

#### Returns

tcp executor

decisionengine.framework.dataspace.tests.fixtures.**SQLALCHEMY\_PG\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*)

Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.dataspace.tests.fixtures.**SQLALCHEMY\_TEMPFILE\_SQLITE**(tmp\_path)

Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.dataspace.tests.fixtures.datasource(request)

This parameterized fixture will setup up various datasources.

Add datasource objects to DATASOURCES\_TO\_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.tests.fixtures.dataspace(request)

This parameterized fixture will setup up various datasources. Add datasource objects to DATA-SOURCES\_TO\_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.tests.fixtures.load\_sample\_data\_into\_datasource(schema\_only\_db) load our sample test data into a dataspace This is a function not a fixture so you can run it on any datasource providing the right API.

## decisionengine.framework.dataspace.tests.test\_Reaper module

         Insert a new product into database with header and metadata
     __update(key, value, header, metadata)
         Update an existing product in the database with header and metadata
     _setitem(key, value, header, metadata=None)
         put a product in the database with header and metadata
```

## duplicate()

Duplicate the datablock and return this new DataBlock. The intent is that at the point the duplication occurs there is only information from the sources in the DataBlock. This also increments the generation\_id of this DataBlock.

TODO: Also update the header and the metadata information TODO: Make this threadsafe

### Return type

DataBlock

get(key, default=None)

Return the value associated with the key in the database

### Return type

dict

get\_dataproducts(key=None)

get\_header(key)

Return the Header associated with the key in the database

#### Return type

Header

get\_metadata(key)

Return the metadata associated with the key in the database

### Return type

Metadata

get\_taskmanager(taskmanager\_name, taskmanager\_id=None)

Retrieve TaskManager

### **Parameters**

- taskmanager\_name (str) Name of the TaskManager
- taskmanager\_id (str, optional) ID of the TaskManager to retrieve. Defaults to None.

## Returns

TaskManager information

# Return type

dict

The dictionary returned looks like:

### is\_expired(key=None)

Check if the dataproduct for a given key or any key is expired

keys()

```
mark_expired(expiration_time)
          Set the expiration_time for the current generation of the dataproduct and mark it as expired if expira-
          tion time <= current time
     put(key, value, header, metadata=None)
          Put data into the DataBlock
     store_taskmanager(taskmanager_name, taskmanager_id)
          Persist TaskManager, returns sequence number:type taskmanager_name: string:type taskmanager_id:
          :obj: string :rtype: int

                                                                           product_source)
     Bases: object
```

```
decisionengine.framework.dataspace.datablock.compress(obj)
```

Compress python object :param obj: python object :return: compressed object

decisionengine.framework.dataspace.datablock.decompress(zbytes)

Decompress zipped byte stream, convert to string. :param zbytes: byte stream :return: uncompressed string

decisionengine.framework.dataspace.datablock.zdumps(obj)

Pickle and compress :param obj: a python object :return: compressed string

decisionengine.framework.dataspace.datablock.**zloads**(*zbytes*)

Decompress and unpickle If input is not compressed attempts to just unpickle it

#### **Parameters**

**zbytes** – compressed bytes

#### Returns

returns python object

## decisionengine.framework.dataspace.datasource module

```
class decisionengine.framework.dataspace.datasource.DataSource(config)
```

Bases: object

```
_abc_impl = <_abc._abc_data object>
```

#### abstract close()

Close all connections to the database

### abstract connect()

Create a pool of database connections

#### abstract create\_tables()

Create database tables

#### dataproduct table = 'dataproduct'

Name of the dataproduct table

## abstract delete\_data\_older\_than(days)

Delete data older that interval :type days: long :arg days: remove data older than interval

# abstract duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

## **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- new\_generation\_id (int) generation\_id of the new datablock created

### abstract get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data

#### abstract get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

### **Parameters**

- taskmanager\_id (string) taskmanager id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## abstract get\_dataproducts(taskmanager\_id, key)

Return list of all data products associated with with taskmanager\_id

#### **Parameters**

key (string) – data product key

## abstract get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## abstract get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

### **Parameters**

- taskmanager\_name (string) task manager name
- taskmanager\_id (string) task manager id

## abstract get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

#### abstract get\_schema(table=None)

Given the table name return it's schema

### **Parameters**

table (string) – Name of the table

# abstract get\_taskmanager(taskmanager\_name, taskmanager\_id)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

### abstract get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Retrieve TaskManagers :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

### header\_table = 'header'

Name of the header table

#### **abstract insert**(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

### metadata\_table = 'metadata'

Name of the metadata table

### abstract reset\_connections()

Drop any cached connections and reconnect to the database

## abstract store\_taskmanager(taskmanager\_name, taskmanager\_id, datestamp=None)

Store TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve :type datestamp: datetime :arg datestamp: datetime of created object, defaults to 'now'

### taskmanager\_table = 'taskmanager'

Name of the taskmanager table

abstract update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

### decisionengine.framework.dataspace.dataspace module

```
class decisionengine.framework.dataspace.dataspace.DataSpace(config)
```

Bases: object

DataSpace class is collection of datablocks and provides interface to the database used to store the actual data

close()

```
delete(taskmanager_id, all_generations=False)
```

duplicate\_datablock(taskmanager id, generation id, new generation id)

get\_datablock(taskmanager\_id, generation\_id)

```
get_dataproduct(taskmanager_id, generation_id, key)
     get_dataproducts(taskmanager_id, key=None)
     get_header(taskmanager_id, generation_id, key)
     get_last_generation_id(taskmanager_name, taskmanager_id=None)
     get_metadata(taskmanager_id, generation_id, key)
     get_taskmanager_id=None)
     get_taskmanagers(taskmanager_name=None, start_time=None, end_time=None)
     insert(taskmanager_id, generation_id, key, value, header, metadata)
     mark_demented(taskmanager_id, keys, generation_id=None)
     mark_expired(taskmanager_id, generation_id, key, expiry_time)
     store_taskmanager(name, taskmanager id, datestamp=None)
     update(taskmanager_id, generation_id, key, value, header, metadata)
exception decisionengine.framework.dataspace.dataspace.DataSpaceConfigurationError
     Bases: Exception
     Errors related to database access
exception decisionengine.framework.dataspace.dataspace.DataSpaceConnectionError
     Bases: Exception
     Errors related to database access
exception decisionengine.framework.dataspace.dataspace.DataSpaceError
     Bases: Exception
     Errors related to database access
exception decisionengine.framework.dataspace.dataspace.DataSpaceExistsError
     Bases: Exception
     Errors related to database access
decisionengine.framework.dataspace.maintain module
class decisionengine.framework.dataspace.maintain.Reaper(config)
     Bases: object
     Reaper provides functionality of periodic deletion of data older than retention_interval in days
     The class attributes indicate a rational set of defaults that shouldn't be altered by user configuration.
     MIN_RETENTION_INTERVAL_DAYS = 7
     MIN_SECONDS_BETWEEN_RUNS = 7080
     _reaper_loop(delay)
          The thread actually runs this.
```

```
reap()
```

Actually spawn the query to delete the old records. Lock the state as this task doesn't have a cancel option.

## property retention\_interval

We have data constraints, so use a property to track

### property seconds\_between\_runs

We have data constraints, so use a property to track

start(delay=0)

Start thread with an optional delay to start the thread in X seconds

stop()

Try to stop the reaper, will block if the reaper cannot be interupted.

#### Module contents

decisionengine.framework.engine package

## **Subpackages**

decisionengine.framework.engine.tests package

### **Submodules**

decisionengine.framework.engine.tests.fixtures module

```
pytest defaults
```

```
decisionengine.framework.engine.tests.fixtures.DEServer(conf_path=None, conf_override=None, channel_conf_path=None, channel_conf_override=None, channel_conf_override=None, host='127.0.0.1', port=None, make_conf_dirs_if_missing=False, block_until_startup_complete=True)
```

A DE Server using a private database

```
decisionengine.framework.engine.tests.fixtures.PG_DE_DB_WITHOUT_SCHEMA(request: FixtureRequest) \rightarrow connection
```

Fixture factory for PostgreSQL.

# **Parameters**

request – fixture request object

## Returns

postgresql client

decisionengine.framework.engine.tests.fixtures. $PG_PROG(request: FixtureRequest, tmp\_path\_factory: TempPathFactory) \rightarrow \\Iterator[PostgreSQLExecutor]$ 

Process fixture for PostgreSQL.

### **Parameters**

- request fixture request object
- **tmp\_path\_factory** temporary path object (fixture)

#### Returns

tcp executor

decisionengine.framework.engine.tests.fixtures.**SQLALCHEMY\_PG\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*)

Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.engine.tests.fixtures.SQLALCHEMY\_TEMPFILE\_SQLITE(tmp\_path)

Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

```

#### **Module contents**

#### **Submodules**

# decisionengine.framework.engine.ChannelWorkers module

Bases: Process

Class that encapsulates a channel's task manager as a separate process.

This class' run function is called whenever the process is started. If the process is abruptly terminated—e.g. the run method is pre-empted by a signal or an os.\_exit(n) call—the ChannelWorker object will still exist even if the operating-system process no longer does.

To determine the exit code of this process, use the ChannelWorker.exitcode value, provided by the multiprocessing.Process base class.

```
get_consumes()
get_produces()
get_state_name()
run()
    Method to be run in sub-process; can be overridden in sub-class
setup_logger()
wait_while(state, timeout=None)
```

### class decisionengine.framework.engine.ChannelWorkers.ChannelWorkers

Bases: object

This class manages and provides access to the task-manager workers.

The intention is that the decision engine never directly interacts with the workers but refers to them via a context manager:

```
with workers.access() as ws:
```

```
# Access to ws now protected ws['new_channel'] = ChannelWorker(...)
```

In cases where the decision engine's block\_while method must be called (e.g. during tests), one should use unguarded access:

```
ws = workers.get_unguarded() # Access to ws is unprotected ws['new_channel'].wait_while(...)
```

Calling a blocking method while using the protected context manager (i.e. workers.access()) will likely result in a deadlock.

# decisionengine.framework.engine.ClientMessageReceiver module

```
class decisionengine.framework.engine.ClientMessageReceiver.ClientMessageReceiver(exchange_name,
```

```
ex-
change_type,
bro-
ker_url,
rout-
ing_key_suffix,
log-
ger_name)
```

```
Bases: object
_receive(body, message)
execute(func, *args)
```

### decisionengine.framework.engine.DecisionEngine module

Main loop for Decision Engine. The following environment variable points to decision engine configuration file: DECISION\_ENGINE\_CONFIG\_FILE if this environment variable is not defined the DE-Config.py file from the ``../tests/etc/ directory will be used.

```
class decisionengine.framework.engine.DecisionEngine.DecisionEngine(global_config,
```

```
channel_config_loader,
server_address)
```

```
Bases: ThreadingMixIn, SimpleXMLRPCServer
_dataframe_to_column_names(df)
_dataframe_to_csv(df)
_dataframe_to_json(df)
_dataframe_to_table(df)
_dataframe_to_vertical_tables(df)
```

```
_dispatch(method, params)
```

Dispatches the XML-RPC method.

XML-RPC calls are forwarded to a registered function that matches the called XML-RPC method name. If no such function exists then the call is forwarded to the registered instance, if available.

If the registered instance has a \_dispatch method then that method will be called with the name of the XML-RPC method and its parameters as a tuple e.g. instance.\_dispatch('add',(2,3))

If the registered instance does not have a \_dispatch method then the instance will be searched to find a matching method and, if found, will be called.

Methods beginning with an '\_' are considered private and will not be called.

```
block_while(state, timeout=None)
create_channel(channel_name, channel_config)
get_logger()
metrics()
reaper_start(delay)
reaper_status()
reaper_stop()
rm_channel(channel, maybe_timeout)
rpc_block_while(client_queue, state_str, timeout=None)

rpc_print_products(client_queue)
rpc_product_dependencies(client_queue)
rpc_query_tool(client_queue, product, format=None, start_time=None)
rpc_queue_status(client_queue)
rpc_reaper_start(client_queue, delay=0)
    Start the reaper process after 'delay' seconds. Default 0 seconds delay. :type delay: int
rpc_reaper_status(client_queue)
rpc_reaper_stop(client_queue)
```

```
rpc_rm_channel(client_queue, channel, maybe_timeout)
     rpc_set_channel_log_level(client_queue, channel, log_level)
          Assumes log_level is a string corresponding to the supported logging-module levels.
     rpc_set_source_log_level(client_queue, source, log_level)
          Assumes log_level is a string corresponding to the supported logging-module levels.
     rpc_show_config(client_queue, channel)
          Show the configuration for a channel.
     rpc_show_de_config(client_queue)
     rpc_start_channel(client_queue, channel_name)
     rpc_start_channels(client_queue)
     rpc_status(client_queue)
     rpc_stop(client_queue=None)
     rpc_stop_channel(client_queue, channel)
     rpc_stop_channels(client_queue)
     service_actions()
          Called by the serve_forever() loop.
          May be overridden by a subclass / Mixin to implement any code that needs to be run during the loop.
     start_channel(channel_name, src_workers)
     start_channels()
     start_webserver()
          Start CherryPy webserver using configured port. If port is not configured use default webserver port.
     stop_channels()
     stop_worker(worker, timeout)
class decisionengine.framework.engine.DecisionEngine.RequestHandler(request, client address,
                                                                               server)
     Bases: SimpleXMLRPCRequestHandler
     rpc_paths = ('/RPC2',)
class decisionengine.framework.engine.DecisionEngine.StopState(value)
     Bases: Enum
     An enumeration.
     Clean = 2
     NotFound = 1
     Terminated = 3
```

decisionengine.framework.engine.DecisionEngine._requests_in_flight(redis_obj, exchange_name)
decisionengine.framework.engine.DecisionEngine._start_de_server(server)
     Start the DE server and listen forever
decisionengine.framework.engine.DecisionEngine._verify_redis_server(broker_url)
decisionengine.framework.engine.DecisionEngine._verify_redis_url(broker_url)
decisionengine.framework.engine.DecisionEngine.main(args=None)
     If args is None, sys.argv will be used instead If args is a list, it will be used instead of sys.argv (for unit testing)
decisionengine.framework.engine.DecisionEngine.parse_program_options(args=None)
     If args is a list, it will be used instead of sys.argv
decisionengine.framework.engine.SourceWorkers module
class decisionengine.framework.engine.SourceWorkers.SourceWorker(key, config, logger_config,
                                                                        channel name, exchange,
                                                                        broker url)
     Bases: Process
     Provides interface to loadable modules an events to sycronize execution
     get_loglevel()
     run()
          Get the data from source
     set_loglevel_value(log level)
          Assumes log_level is a string corresponding to the supported logging-module levels.
     setup_logger()
     take_offline()
```

```
class decisionengine.framework.engine.SourceWorkers.SourceWorkers(exchange, broker url, log-
                                                                               ger=<BoundLoggerLazyProxy(logger=None,
                                                                               wrapper class=None,
                                                                               processors=None,
                                                                               context class=None,
                                                                               initial values={}, log-
                                                                               ger factory args=('decisionengine',
                                                                               ))>)
     Bases: object
     This class manages and provides access to the Source workers.
     The intention is that the decision engine never directly interacts with the workers but refers to them via a context
     manager:
          with workers.access() as ws:
               # Access to ws now protected ws['new_source'] = SourceWorker(...)
     In cases where the decision engine's block_while method must be called (e.g. during tests), one should use
     unguarded access:
          ws = workers.get_unguarded() # Access to ws is unprotected ws['new_source'].wait_while(...)
     Calling a blocking method while using the protected context manager (i.e. workers.access()) will likely result in
     a deadlock.
     class Access(workers, lock)
          Bases: object
     access()
     detach(channel_name, source_names)
     get_unguarded()
     prune(channel name, source names)
     remove_all(timeout)
     update(channel_name, source_configs, logger_config)
decisionengine.framework.engine.de client module
decisionengine.framework.engine.de_client.command_for_args(argsparsed, de socket)
     argsparsed should be from create_parser in this file
decisionengine.framework.engine.de_client.console_scripts_main(args_to_parse=None)
     This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is
     an error message.
```

decisionengine.framework.engine.de\_client.create\_parser()

If you pass a list of args, they will be used instead of sys.argv

decisionengine.framework.engine.de\_client.main(args\_to\_parse=None, logger\_name='de\_client')

## decisionengine.framework.engine.de\_query\_tool module

decisionengine.framework.engine.de\_query\_tool.command\_for\_args(argsparsed, de\_socket)

Calls the proper function for the arguments passed to de\_query\_tool.

#### **Parameters**

- argsparsed (Namespace) Should be from create\_parser in this file.
- **de\_socket** (ServerProxy) RPC Server Proxy.

#### Returns

Output of the command.

### Return type

str

decisionengine.framework.engine.de\_query\_tool.console\_scripts\_main(args\_to\_parse=None)

This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is an error message.

decisionengine.framework.engine.de\_query\_tool.create\_parser()

decisionengine.framework.engine.de\_query\_tool.main(args\_to\_parse=None,

logger\_name='de\_query\_tool')

Main function for de\_query\_tool

#### **Parameters**

args\_to\_parse (list, optional) - If you pass a list of args, they will be used instead of sys.argv. Defaults to None.

#### Returns

Query result

### **Return type**

str

### **Module contents**

#### **Submodules**

## decisionengine.framework.logicengine.BooleanExpression module

```
class decisionengine.framework.logicengine.BooleanExpression.BooleanExpression(expr)
    Bases: object
    evaluate(d)
        Return the evaluated Boolen value of this expression in the context of the given data 'd'.

exception decisionengine.framework.logicengine.BooleanExpression.LogicError
    Bases: TypeError

decisionengine.framework.logicengine.BooleanExpression.function_name_from_call(callnode)
decisionengine.framework.logicengine.BooleanExpression.maybe_fail_on_error(expr)
```

# decisionengine.framework.logicengine.FactLookup module

Establishes a policy for looking up a fact based on the given name.

To wit, the first fact with a given name is the one that is used in the evaluation of all subsequent facts.

As an example, consider the following configuration:

```
{
    "facts": {
        "should_publish": "(True)"
    },
    "rules": {
        "publish_1": {
            "expression": "should_publish",
            "facts": ["should_publish"]
        },
        "publish_2": {
            "expression": "should_publish",
            "actions": ["go_to_press"],
            "facts": ["should_publish"]
        "retract": {
            "expression": "not should_publish",
            "facts": ["should_retract"]
        }
    }
}
```

In the above, the first fact to be evaluated will always be the top-level facts (i.e. those not encapsulated by the 'rules' table). The rules labeled 'publish\_1' and 'publish\_2' both rely on the 'should\_publish' fact in their expressions, and they in turn create their own facts with the same name. FactLookup ensures that 'publish\_1' and 'publish\_2' will both use the evaluated fact from the top-level 'facts' table.

```
rule_for(fact_name)
```

Selects rule required to evaluate fact with the supplied name.

### **Parameters**

**fact\_name** (*str*) – Name of fact for which rule will be selected.

## Return type

str

#### **Returns**

Rule name

### sorted\_rules(rules\_cfg)

Rules sorted according to rule dependencies.

#### **Parameters**

rules\_cfg (dict) - rules as specified in logic-engine configuration

## Return type

list

#### Returns

Rules to be evaluated by the rule engine.

## decisionengine.framework.logicengine.LogicEngine module

```
class decisionengine.framework.logicengine.LogicEngine.LogicEngine(cfg)
```

Bases: Module

## \_create\_facts\_dataframe(newfacts)

Convert newfacts dict in format below to dataframe with columns ['rule\_name', 'fact\_name', fact\_value']

facts dict format:

### consumes()

Return the names of all the items that must be in the DataBlock for the rules to be evaluated.

#### evaluate(db)

Evaluate our facts and rules, in the context of the given data. db can be any mappable, in particular a DataBlock or dictionary.

### **Parameters**

**db** (DataBlock) – Products used to evaluate facts.

## evaluate\_facts(db)

#### **Parameters**

**db** (DataBlock) – Products used to evaluate facts.

## **Return type**

dict

#### Returns

Evaluated fact values (e.g. True or False) for each fact name.

#### produces()

 ${\tt decisionengine.framework.logicengine.LogicEngine.pass through\_configuration(\it publisher\_names)}$ 

Assembles logic-engine configuration to unconditionally execute all publishers.

## decisionengine.framework.logicengine.Rule module

```
class decisionengine.framework.logicengine.Rule.Rule(rule_name, rule_cfg)
```

Bases: object

In-memory representation of logic-engine rule, relying on parsing utilities in BooleanExpression.

### evaluate(evaluated\_facts)

Evaluates a compiled expression given the supplied facts.

#### **Parameters**

**evaluated\_facts** (*dict*) – Initial fact values (e.g. True or False) for each fact name.

### Return type

bool

## decisionengine.framework.logicengine.RuleEngine module

class decisionengine.framework.logicengine.RuleEngine.RuleEngine(fact\_names, rules\_cfg)

Bases: object

Engine responsible for evaluating logic-engine rules.

This class is responsible for (a) forming a sorted set of rules that supports dependencies between them, and (b) evaluating the rules according to a specified fact-lookup policy.

#### execute(evaluated facts)

Evaluates all rules given the supplied facts.

#### Parameters

**evaluated\_facts** (*dict*) – Initial fact values (e.g. True or False) for each fact name.

### Return type

tuple

#### Returns

Actions to be taken based on rule evaluation; new facts produced during that evaluation.

## decisionengine.framework.modules.translate\_product\_name module

#### **Module contents**

## decisionengine.framework.taskmanager package

# Submodules

### decisionengine.framework.taskmanager.LatestMessages module

The LatestMessages class listens for messages from a set of queues and retains only the last unconsumed message from each queue.

The latest messages are consumed by calling the consume() instance method, which returns a dictionary whose key is the message routing key and whose value is the full message. If no messages are available, consume() returns an empty dictionary.

The LatestMessages class is intended to be used as a context manager (e.g.):

```
with LatestMessages(queues, broker_url) as messages:
   while some_predicate():
        msgs = messages.consume()
        if not msgs:
            continue

        for routing_key, msg in msgs.items():
        ...
```

Upon exiting the the context, a LatestMessage object will no longer listen for any messages.

```
class decisionengine.framework.taskmanager.LatestMessages.LatestMessages(queues, broker_url)
    Bases: object
    _listen()
    consume()
```

Return dictionary of latest messages, keyed by message routing key.

## decisionengine.framework.taskmanager.ProcessingState module

The ProcessingState class can represent any of the following task-manager states:

```
BOOT IDLE ACTIVE STEADY OFFLINE SHUTTINGDOWN SHUTDOWN ERROR
```

In addition, the class supports 'wait\_until(state)' and 'wait\_while(state)' methods, which, when called from a different process, block until the state has been entered or exited, respectively.

The 'RUNNING\_CONDITIONS' list is a list of states that a thread may have if it is started/starting. The 'STOPPING\_CONDITIONS' list is a list of states that a thread may have if it is stopped/stopping. The 'INAC-TIVE\_CONDITIONS' list is a list of states that a thread may have when it is not active

```
\textbf{class} \ \ \text{decisionengine.} framework. task manager. Processing State. \textbf{\textit{ProcessingState}} (\textit{state} = \textit{State}. BOOT)
```

Bases: object

This object tracks the state of a process.

A number of convience wrappers are provided.

Additionally you may use the .lock attribute for with block to lock the state during specific operations.

get()

This function is a minimally locking check to fetch the state.

```
get_state_value()
has_value(state)
inactive()
property lock
probably_running()
set(state)
```

This function will lock (and possibly block) to ensure a consistent change to the state value.

This function can be blocked using the .lock to force state sync between threads if need be.

```
should_stop()
     wait_until(state, timeout=None)
     wait_while(state, timeout=None)
class decisionengine.framework.taskmanager.ProcessingState.State(value)
     Bases: Enum
     An enumeration.
     ACTIVE = 2
     BOOT = 0
     ERROR = 7
     IDLE = 1
     OFFLINE = 6
     SHUTDOWN = 5
     SHUTTINGDOWN = 4
     STEADY = 3
decisionengine.framework.taskmanager.SourceProductCache module
class decisionengine.framework.taskmanager.SourceProductCache.SourceProductCache(expected_products,
                                                                                         logger)
     Bases: object
     update(new_data)
decisionengine.framework.taskmanager.TaskManager module
Task manager
class decisionengine.framework.taskmanager.TaskManager.TaskManager(name, workers, dataspace,
                                                                         expected_products,
                                                                         exchange, broker_url,
                                                                         routing_keys)
     Bases: object
     Task manager
     data_block_put(data, header, data_block)
         Put data into data block
             Parameters
                 • data (dict) – key, value pairs
                 • header (Header) – data header
                 • data_block (DataBlock) - data block
```

```
decision_cycle()
     Decision cycle to be run periodically (by trigger)
get_consumes()
get_loglevel()
get_produces()
get_state()
get_state_name()
get_state_value()
run_cycle(messages)
run_cycles()
     Task manager main loop
run_logic_engine(data_block)
     Run Logic Engine.
         Parameters
            data_block (DataBlock) - data block
run_publishers(actions, data block)
     Run Publishers in main process.
         Parameters
            data_block (DataBlock) - data block
run_transform(worker, data_block)
     Run a transform
         Parameters
             • worker (Worker) - Transform worker
             • data_block (DataBlock) - data block
run_transforms(data_block=None)
     Run transforms. So far in main process.
         Parameters
            data_block (DataBlock) - data block
set_loglevel_value(log_level)
     Assumes log_level is a string corresponding to the supported logging-module levels.
take_offline()
```

Adjust status to stop the decision cycles and bring the task manager offline

# decisionengine.framework.taskmanager.module\_graph module

```
Ensure no circularities in produces and consumes.
class decisionengine.framework.taskmanager.module_graph.Worker(key, conf_dict, base_class,
                                                                      channel_name)
     Bases: object
     Provides interface to loadable modules an events to sycronise execution
decisionengine.framework.taskmanager.module_graph._consumed_products(*worker_lists)
decisionengine.framework.taskmanager.module_graph._create_module_instance(config_dict,
                                                                                  base class,
                                                                                  channel name)
     Create instance of dynamically loaded module
decisionengine.framework.taskmanager.module_graph._find_only_one_subclass(module,
                                                                                  base_class)

# decisionengine.framework.tests.TransformWithMissingProducesConsumes module

class decisionengine.framework.tests.TransformWithMissingProducesConsumes.Transf

# decisionengine.framework.tests.WriteToDisk module

Special publisher used to register publish calls with an external file.

It is difficult to interact with individual publishers while testing a workflow. The WriteToDisk publisher therefore writes to an external file that can be read by a test. Ideally, we would implement a system so that the test and any instance of the WriteToDisk class are passed the same file-name string. Unfortunately, this is non-trivial to achieve without adjusting the behavior of the decision-engine server itself. We therefore choose the following abstruse logic:

- WriteToDisk creates a temporary file and broadcasts its name to STDOUT. Note that this temporary file must be uniquely named as multiple tests can use WriteToDisk in parallel.
- Capture STDOUT in the DETestWorker class.
- Pass STDOUT to the 'wait\_for\_n\_writes' which will wait until the number 'n' appears in the file.

```
\textbf{class} \ \ \textbf{decisionengine.framework.tests.WriteToDisk.WriteToDisk} (\textit{config})
```

```
Bases: Publisher
   _supported_config = {'consumes': (<class 'list'>, None, None), 'filename': (<class 'str'>, None, None)}
   publish(data_block)
decisionengine.framework.tests.WriteToDisk.wait_for_n_writes(stdout, n)
```

## decisionengine.framework.tests.fixtures module

```
defaults for pytest

decisionengine.framework.tests.fixtures.DEServer(conf_path=None, conf_override=None, channel_conf_path=None, channel_conf_override=None, host='127.0.0.1',

port=None, make_conf_dirs_if_missing=False,
block_until_startup_complete=True)

A DE Server using a private database
```

 $\mbox{decisionengine.framework.tests.fixtures.} \mbox{\bf PG\_DE\_DB\_WITHOUT\_SCHEMA} (\textit{request: FixtureRequest}) \rightarrow \mbox{connection}$ 

```
Fixture factory for PostgreSQL.
```

```
Parameters
request – fixture request object

Returns
postgresql client
```

decisionengine.framework.tests.fixtures.**PG\_PROG**(request: FixtureRequest, tmp\_path\_factory: TempPathFactory)  $\rightarrow$  Iterator[PostgreSQLExecutor]

Process fixture for PostgreSQL.

#### **Parameters**

- request fixture request object
- **tmp\_path\_factory** temporary path object (fixture)

#### Returns

tcp executor

decisionengine.framework.tests.fixtures.SQLALCHEMY\_PG\_WITH\_SCHEMA(PG\_DE\_DB\_WITHOUT\_SCHEMA)

Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.tests.fixtures.SQLALCHEMY\_TEMPFILE\_SQLITE(tmp\_path)

Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

# decisionengine.framework.tests.test client errors module

Fixture based DE Server tests of the sample config

decisionengine.framework.tests.test\_client\_errors.test\_client\_cannot\_wait\_on\_bad\_state(deserver)

Verify wait is for a valid state

# decisionengine.framework.tests.test\_client\_server module

Fixture based DE Server for the de-client tests

```
decisionengine.framework.tests.test_client_server.test_client_get_loglevel(deserver)
decisionengine.framework.tests.test_client_server.test_client_print_product(deserver)
decisionengine.framework.tests.test_client_server.test_client_set_loglevel(deserver)
decisionengine.framework.tests.test_client_server.test_client_status_msg_to_logger(deserver, caplog)
```

Make sure the actual client console call goes to a logging destination

## 5.1. Welcome to decisionengine's documentation!

decisionengine.framework.tests.test\_start\_with\_bad\_channels.test\_client\_can\_get\_products\_no\_channels(des

Verify client can get channel products even when none are run

# decisionengine.framework.tests.test\_status\_during\_startup module

decisionengine.framework.tests.test\_status\_during\_startup.test\_status\_during\_startup(deserver no wait)

## **Module contents**

# decisionengine.framework.util package

#### **Submodules**

### decisionengine.framework.util.countdown module

```
class decisionengine.framework.util.countdown.Countdown(wait_up_to)
```

Bases: object

Countdown is a context manager that keeps track of elapsed time.

It is designed to be used for cases where a sequence of operations should not take longer than a specified period of time. This is done by occasionally querying the 'time\_left' attribute (e.g.):

```
countdown = Countdown(wait_up_to=10)
for p in processes:
    with countdown:
        rc = p.join(countdown.time_left)
        if rc is None:
            p.terminate()
```

In the above example, the time it takes to shutdown all processes should not exceed 10 seconds. Upon entering the countdown context, a timer starts. Once that context is exited, the timer stops and the elapsed time is subtracted from the initial 'wait\_up\_to' value. If it takes 10 seconds for the first process to join, then the 'time\_left' value will be 0 when joining all subsequent processes. In this way, the entire sequence of operations is constrained to occur in roughly 10 seconds.

# decisionengine.framework.util.fs module

decisionengine.framework.util.fs.files\_with\_extensions(dir\_path, \*extensions)

Return all files in dir\_path that match the provided extensions.

If no extensions are given, then all files in dir\_path are returned.

Results are sorted by channel name to ensure stable output.

# decisionengine.framework.util.logparser module

decisionengine.framework.util.logparser.console\_scripts\_main(args\_to\_parse=None)

This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is an error message.

decisionengine.framework.util.logparser.create\_parser()

Parse the log file as requested.

#### **Parameters**

- **argsparsed** (Namespace) Parsed arguments from create\_parser in this file.
- logfile (path) Log file path.
- **constraint** (*dict*) Combined constraints dictionary

#### Returns

Output of the command.

# Return type

Sfi

decisionengine.framework.util.logparser.main(args\_to\_parse=None)

Main function for logparser

#### **Parameters**

- args\_to\_parse (list, optional) If you pass a list of args, they will be used instead of sys.argv.
- None. (Defaults to) -

# Returns

Parsing result

# Return type

str

decisionengine.framework.util.logparser.matches\_constraint(constraint, linelist, linedict)

Return True if all constraints are marched

### **Parameters**

- **constraint** (*dict* / *None*) combined constraints
- linelist (list) List of line fields
- **linedict** (*dict*) Dictionary with structured elements

### Returns

True is all constraints are matched, False otherwise

# **Return type**

bool

decisionengine.framework.util.logparser.parse\_constraints(constraints, loglevel=None)

Parse and combine the constraints

## **Parameters**

```
    constraints (list | None) – List of constraints
    loglevel (str) – Logging level, e.g. DEBUG, INFO, ...
```

Returns

combined constraint dictionary

Return type

dict

# decisionengine.framework.util.metrics module

decisionengine.framework.util.metrics.display_metrics()
decisionengine.framework.util.reaper module
A stand-alone script purges data in database older than specified in configuration. Configuration file has to have this
bit added:
     {
          "dataspace" : {
               "retention_interval_in_days" : 365,
               "datasource" : {}
          }
     }
```

Can be used in a cron job.

decisionengine.framework.util.reaper.main()

# decisionengine.framework.util.redis\_stats module

decisionengine.framework.util.redis\_stats.redis\_stats(broker\_url, exchange)

# decisionengine.framework.util.singleton module

```
_instances = {}
```

class decisionengine.framework.util.singleton.SingletonABC(name, bases, namespace, \*\*kwargs)
 Bases: ABCMeta, Singleton

# decisionengine.framework.util.sockets module

decisionengine.framework.util.sockets.get\_random\_port()

## decisionengine.framework.util.subclasses module

decisionengine.framework.util.subclasses.\_derived\_class(cls, base\_class)
Only matches subclasses that are not equal to the base class.

decisionengine.framework.util.subclasses.all\_subclasses(module, base\_class)

Return all of a module's subclasses of the given base class.
