The Decision Engine is a critical component of the HEP Cloud Facility. It provides the functionality of resource scheduling for disparate resource providers, including those which may have a cost or a restricted allocation of cycles

**CHAPTER** 

ONE

#### **RELEASE NOTES**

#### 1.1 Release Notes

HEPCloud's Decision Engine release notes.

The latest release is the designated production release. Decision Engine will support also N-1. New feature development will happen in the development branch and go in the next (N+1) release.

#### 1.1.1 Release 1.7.0

This release features:

- New produces-consumes structure using decorators. This will improve the code quality, improving static checks and reducing the lines of code by removing repetitive boilerplates, especially in the modules.
- Added structured logging. Improved python logging and adoption of structured logs format that will increase the semantinc content of the messages and ease the export of information for dashboards and Elastic Search.
- Added SQLAlchemy object-relational mapper to increase the testability of DB interactions and to allow different database backends. Switching between datasource backends requires dropping all objects if you wish to reuse the tablespace.
- Packaging via setuptools for both decisionengine and decisionengine\_modules: Dependencies are not yet fully listed in the RPMs.
- A new, optional, configuration parameter called "channel\_name" is available. "channel\_name" is one of the keys in the output dictionary of the structured logging and will be used in the upcoming monitoring. If the variable is not defined in the configuration file, then it is taken from the name of the file, e.g. the job\_classification.jsonnet config file gives a default "channel\_name" value of "job\_classification".

Note: Added (for requirement **SQLAlchemy** datasource backon new end). Non-SQLAlchemy should ensure the indexes from 13c2f283 users <https://github.com/HEPCloud/decisionengine/commit/13c2f28325d697701d9417fb2116364f018da535> are their database.

Note: Added requirement on prometheus-client. Prometheus will be used as optional monitoring component.

**Note:** The "channel\_name" key in the Source Proxy config dictionaries needs to be changed to "source\_channel". "channel\_name" is now being used to describe the name of the channel itself, not the name of the channel the Source

Proxy is gettting information from.

#### Issues fixed in this release

- 481: Channel name should be available to all worker types in TaskManager
- 456: Logic engine messages show in the main DE log (1.6.99 post4) prj\_testing
- 458: Exception in new SQLAlchemy data source 1.6.99post4
- 455: New postgresql exception in 1.6.99post4 (aka Fixed databese inconsistency silently ignored in v1.6)
- 456: Logic engine messages show in the main DE log (1.6.99 post4)
- 451: Transforms executed in wrong order in 1.6.99.post3
- 367: Test race conditions bug
- 406: Taskmanager doesn't use/honor global log level
- 379: Add postgresql.sql to distributed decisionengine rpm
- 329: Docker container is missing pylint
- 293: Drop requirements.txt setup mode
- 285: Unify ProcessingState with Reaper state management code
- 253: Decision engine can sometimes start up at boot time before network name resolution is working (ae04db5)

#### Full list of commits since version 1.6.0

```
029d118a: Updated release notes for 1.7.0 RC4 (1.6.99.post8)
0e19c754: fix SP
810994af: Update release_notes_1.7.rst
fbee95e7: Update release_notes_1.7.rst
68b955b0: Make sure product is a string
ef7a8b96: Automatically adjust PYTHONPATH for tests
e292d388: Updated release notes for 1.7.0 RC3 (1.6.99.post7)
d60b6e4e: new changes for logging with common logger name "channel"
8cdeb67e: Simplify return expression
8fb128d3: Ensure file is "flushed" so name is fully established
7806aa00: Add github CodeQL analysis
9f09bca9: removed modules/LogicEngine.py and corresponding test
b9d28fbf: Cleaner check for Any
cc91aa24: Switch to fstring formatting
```

7bb5b64f: Just return created value rather than store then return

f4847fbe: Combine nested *with* blocks 4ba38bcd: Drop redundant brackets

```
bdcfe8c9: By convention, pandas is usually imported as pd
1dd904ff: Use more traditional expression order
cccd31bc: Unused loop vars should start with _
c055a5cd: Drop _keys in favor of DB backed keys
e8c689b4: Moved prometheus-client requirement to proper place in list
5391500d: Added metrics API module
c2d7835c: Drop unnecessary timeout
c167fc50: Add tests for de-query-tool entry point
efabfeb3: Updated release notes for 1.7.0 RC2 (1.6.99.post6)
b2739c14: moved logging of LogicEngine from decisionengine logger to channel loggers
0c0532f3: Add locks to help ensure data changes are "atomic"
ae63c6ee: Use DB generated known keys so it always matches DB state
b2259e9e: Use public .keys() rather than internal implementation
85b6c3ba: Real world data shows the defaults are fine
95fb3fdf: Further constrain tablespace
3ebe8619: Finish implementation of get datablock
edbb3568: Add entry point for de-query-tool
fed95c62: adding logging of importlib imports of modules
53e62f03: Sometimes pypy times out on the cleanup.
a44d4bc4: Don't test sqlite on pypy it isn't necessary
b13aa8a9: Some corrections
94c14110: Fix missing defines
5f102095: More detailed testing of datablock
b6c99021: Make sure our sqlite tests have ForeignKeyConditional support
6b76ba7c: Fix typo
6694369d: Ensure dbutils uses transactions
1df400ae: Fix spaces
5278fd99: Raise timout for numpy on pypy
6d0a1a74: Release notes ready for v1.7.0
084f74e1: Initial SQLAlchemy Datasource
3353aa00: Make sure our jsonnet is json synatx valid
402b1c26: Fix transform-ordering problem.
49297573: Fix incorrect packaging of tests at top level
fbfae499: The test_channel loads data once per second.
33f9ade1: Rename taskmanager test nodb
```

308343e9: Initial modifications for addition of structured logging

```
6f337b75: Add missing error message
23a4b770: Call fixtures in a cleaner manner for xdist
1f2fe8c4: Add self.config so I can introspect the fixtures later
689c0020: Add missing config attrib test
d2732816: Best practices are for fixtues to yield vs return
accef50a: Seed SQLAlchemy fixtures for later activation
31002bc5: Help define the fixture interlocking
0f5fb129: The pandas 1.3.0 doesn't build against PyPy any longer
a7d18a41: Correctly test datablock construction paths
9af4c144: the mock package was a backport for python2.
5ddaff8f: Add another constructor test
9ae9ad13: Make sure if the client says to stop we don't override it
a581cd2b: run pyupgrade against codebase for python3.6
09e4e79c: Handle reaper duplicate shutdowns more cleanly
64d29dc5: Drop pointless cache restore
1c6b2588: Update PyPy to 3.7 for testing
2bae173e: Increase wait for overloaded test workers, update log messages
b67c185c: When aborting CI builds cleanup all processes
6c5d6306: Trim pytest fast functions, add required plugin
8c63ca6b: note why we're ignoring this line
2bd4ecbc: Add a syntax check for the toml files
e2dca404: Sometimes these get stuck
6d012fab: Add in Jenkinsfile pipeline configuration a timeout at stage level
baf07973: Add timeout option to block-while/until
970faf92: Make pre-commit happy
Ocea2285: Fix alignment issue
5620c65b: List why we aren't checking
88611d90: Ensure fixtures are cleaned up between invocations
0ba135d2: Setup blank DB for SQLAlchemy tests and prep fixtures
3793e674: Setup pre-commit
9e6d1317: Migrate test_Reaper to pytest fixtures
51df43bf: Cleanup a bunch of pointless whitespace
96e5d069: Fix typo
9f96f418: Setup datablock to use our paramaterized fixture
36ebc66c: Add config for LGTM
```

c6032e5f: Use topologically sorted transforms to remove some multi-threading.

```
e063f82a: Drop pointless comma
bfd6689e: Begin prepwork for PEP517
72c5725f: Stub out null source rather than more complex mocking
3b65e5e2: Push Singleton into its own space
fb5b177e: Put fixtures in central location
5ab3cbaa: Add more details to channel startup logs
afe7f7d7: Add log about what DB we are hitting
38034b2c: Let the datasource handle the connections internally
5e03b6fe: Since we are opening an IPv4 socket, just use 127.0.0.1 to check
cac2bef3: Fix missing version requirements
3be8f84f: Add line lenght for autoformater
90e2baad: Protect against inappropriate wait under error condition.
943a17a7: Fix de-client typo and adjust tests accordingly.
3b104eba: Set the logs to DEBUG for testing
4c5564d4: Add another sync method to try and make tests less spotty
66bd81f2: Make sure to encourage updates to tools
d16f04cc: Put postgresql datasource schema into RPM
62b97e79: Fix __str__ so it includes all the data
611ef1f8: Drop pointless lines
5b9e2fb6: Drop unreachable excepts
6991f65f: Restore product-name translation required for some source-proxy cases.
f6258c09: Fixed formatting and updated content
104a0446: Update index.rst
2ed61289: Update index.rst
cb687150: Create release notes.rst
3b57d4a2: Note new requirement
871af08b: Added 1.7.0 release notes
ce42b802: improved 1.6 release note
583c10fb: fixed rst error
96d4dc1e: Added 1.6.2 release notes, from branch 1.6
13c2f283: Add some helpful indexes to our default schema
29c32571: Log as workers are started
619021c2: One of these tests seems to be spotty, break them out to find which one
29a2c72d: Run the test in a way that gives us colors
4e36bfd2: Drop unused table create logic
```

5511f69e: Stronger notify state for when we've a lot of watchers.

```
b6cc7a46: Test the dataspace abstractions
e3b1f594: Better messages about our state
2d2feab9: Drop duplicate tests, leave specifics
8e737329: Add parameter based datasource api tests
5c023aa5: Don't do debug logs for flake8, they aren't helpful
f5d1a12f: Setup list of public exports for dataspace.py
7158b422: Merge pull request #365 from jcpunk/bad-update-is-error
cd98cc4a: Update should error out if you try to do it wrongly
eb7907fe: Add option to set taskmanager datestamp and sample usage
e124532c: Make sure the fixture uses the production flow
a8241b6e: Make sure RPM also owns the .egg-info so we don't confuse the namespaces
da87376e: Ensure the DE server is fully started before running query
622bfacf: Simplify use of our PG fixtures
df98ecdf: Fixed flake8 issue
061ff6cf: decisionengine/framework: stop_channel runs Publisher shutdown methods
3727b80b: Fixup comment to avoid assuming this test uses the DB
d45aaf6b: Fix script path typo
a25a4a30: Fix ABC to match our actual usage
1510b2d1: Address minor linting issues
945e4b16: Fix missing attribute insert
5eace9d5: Add note for how to get modules in place
50a8e268: Add list of packages in the CI env to output
b9cb197d: Sanity check the home directory
cd17223c: Have client provide a hint when you ask for no behavior
95b02365: Fix de-query-tool to support produce/consume model
e660ca72: Update required versions for bugfixes
6863cb81: Fix path error
bb52e8b1: Merge pull request #340 from jcpunk/service-stop
6d7aba95: Drop obsolete files
168ae7aa: Name the tests better
0f60c4e3: Support new produces/consumes/configuration-description infrastructure.
81912469: Add de-query-tool
2a26c944: ExecStopPre is not supported on all systemd instances
67a54d5c: Merge pull request #338 from jcpunk/fix-pytest-postgres
70ab133f: Fixup use of pytest_postgresql for version 3.0.0
```

f8f4255e: Merge pull request #337 from jcpunk/thread-names

```
5f49a4f6: Set names for the various parallel code
64da77c6: Merge pull request #327 from jcpunk/datablock-expire
de33a60a: Merge pull request #336 from knoepfel/use-toposort
31a8a905: Merge pull request #328 from knoepfel/de-class-inference
410e383d: Merge pull request #331 from jcpunk/reaper-interval-tests
719ff0c8: Test datablock expire funtions
e14c49d8: The 'name' parameter is optional.
7846c9f3: Enable DE class inference based on configuration.
32ab7e44: Use third-party topological sort.
01aa8ae6: Merge pull request #325 from jcpunk/channel-tests
52b48479: Merge pull request #326 from jcpunk/valid-config-tests
8c4749e7: Merge pull request #330 from jcpunk/pylint-actions
a37770c9: Ensure validation testing is tested
d8ab5eb6: Add missing test to ensure the run interval is actually used
0cd9c42b: Also run pylint for extra sanity checks
c5cf1fff: Ensure our errors error out
baf01700: Merge pull request #324 from jcpunk/cleanup-trivial-tests
2a0133aa: Try to cleanup trivial missing coverage
44e0ad6f: Merge pull request #323 from jcpunk/about-coverage
d811f617: Merge pull request #322 from knoepfel/fix-fail-on-error
cb426262: Merge pull request #312 from jcpunk/finish-setuptools
8f6d407d: Merge pull request #316 from jcpunk/abc-coverage
4d0676bb: Merge pull request #317 from vitodb/pylint
d7c43b96: Use regular expression to support fail on error feature.
ada66925: add support to run pylint tests
efb1e57b: Finish migration to pure setuptools
bc4720cf: We aren't testing 'unversioned' releases
e4dc35e3: Merge pull request #314 from jcpunk/jsonnet_syntax
87e32c22: Merge pull request #294 from jcpunk/move-reaper
dec85d5e: Merge pull request #319 from jcpunk/task-loop
4108472a: Merge pull request #320 from jcpunk/container-swig
920af1c9: Merge pull request #321 from knoepfel/include-init-files
650dffa7: Don't forget __init__.py files.
1b412e03: The latest m2crypto seems to need swig now
a6e3ab1c: Merge pull request #313 from jcpunk/conf-test
```

1205636a: Simplify run loop

```
30e59dc9: fix test_client_with_no_server_verbose unit test for Jenkins CI (#315)
10384a8c: Move reaper into its own place and reuse state logic
940584e4: No real way to test abstract base classes
250c14b1: The _validate function doesn't permit missing 'PRODUCES'
5ae1ce9f: Make sure syntax error in config names the problem
b899fa23: Add SourceProxy module test. (#307)
7b3df14c: Increae coverage of utils (#304)
ddba2a31: Fix duplicate entry warning (#311)
915673fa: Test modules minimally (#298)
bc0c21a9: Some repos may error out, don't let them kill the build (#297)
924a7047: doc: add 1.6.1 release notes
b1ab4d31: doc: fix typo
85e5d714: postgresql: do not print stack trace for low level library (#309)
255c6415: Setuptools uses entry return value as an error msg (#303)
2fd8db45: Fix name to match expectations (#305)
9cddb70a: updated release notes
7fe0358e: Error in more clean methods (#300)
84aa506c: Fix a bug in setup.py parsing of requirements. (#301)
a58b61bb: fix typo in release notes
```

#### 1.1.2 Release 1.6.2

Patch level (bug fix) release.

#### Issues fixed in this release

#### Bugs fixed

- DEM 200 (part of it): Invoke correctly channels shutdown: (75eaa90)
- no issue: Use regular expression to support fail\_on\_error feature (1386d20)

#### **Enhancements:**

- Improved CI support (e.g. added pylint tests)
- 217: Add option to de-client –print-product to only print the column names in a data block and-or to print one or more records in key/value format. (c4c7681)

#### Full list of commits since version 1.6.1

ddba2a3: Fix duplicate entry warning (#311)

```
c4c7681: Updated de-query-tool w/ cherry pick of fixes from latest version of PR#332
f964d4b: Fixup use of pytest_postgresql for version 3.0.0
635ffd1: Also run pylint for extra sanity checks
11676ff: Fixed function w/ the same name
b8278f6: Add de-query-tool
75eaa90: Merge pull request #335 from shreyb/publisher_shutdown_from_1.6
77e3d79: Added set to shutdown method to TaskManager and accompanying test
1386d20: Merge branch 'knoepfel-fix-fail-on-error' into 1.6
73a18b1: Merge branch 'fix-fail-on-error' of https://github.com/knoepfel/decisionengine into knoepfel-fix-fail-on-
error
4f49fb7: Merge branch 'jcpunk-finish-setuptools' into 1.6
a5e5d39: Merge branch 'finish-setuptools' of https://github.com/jcpunk/decisionengine into jcpunk-finish-setuptools
a1ed252: Merge branch 'vitodb-pylint' into 1.6
c8eddda: Merge branch 'pylint' of https://github.com/vitodb/decisionengine into vitodb-pylint Meerging PR#317 to
release branch 1.6
d7c43b9: Use regular expression to support fail_on_error feature.
ada6692: add support to run pylint tests
efb1e57: Finish migration to pure setuptools
e4dc35e: Merge pull request #314 from jcpunk/jsonnet syntax
87e32c2: Merge pull request #294 from jcpunk/move-reaper
dec85d5: Merge pull request #319 from jcpunk/task-loop
4108472: Merge pull request #320 from jcpunk/container-swig
920af1c: Merge pull request #321 from knoepfel/include-init-files
650dffa: Don't forget init .py files.
1b412e0: The latest m2crypto seems to need swig now
a6e3ab1: Merge pull request #313 from jcpunk/conf-test
1205636: Simplify run loop
de553a7: fix test_client_with_no_server_verbose unit test for Jenkins CI (#315)
30e59dc: fix test_client_with_no_server_verbose unit test for Jenkins CI (#315)
10384a8: Move reaper into its own place and reuse state logic
250c14b: The _validate function doesn't permit missing 'PRODUCES'
5ae1ce9: Make sure syntax error in config names the problem
b899fa2: Add SourceProxy module test. (#307)
7b3df14: Increae coverage of utils (#304)
```

```
915673f: Test modules minimally (#298)
bc0c21a: Some repos may error out, don't let them kill the build (#297)
924a704: doc: add 1.6.1 release notes
b1ab4d3: doc: fix typo
85e5d71: postgresql: do not print stack trace for low level library (#309)
255c641: Setuptools uses entry return value as an error msg (#303)
2fd8db4: Fix name to match expectations (#305)
9cddb70: updated release notes
7fe0358: Error in more clean methods (#300)
84aa506: Fix a bug in setup.py parsing of requirements. (#301)
a58b61b: fix typo in release notes
33660bf: fixed a typo[locuser@fermicloud462 decisionengine]
```

#### 1.1.3 Release 1.6.1

Patch level (bug fix) release.

#### Issues fixed in this release

- 306 : /etc/decisionengine/decision\_engine.conf as shipped in RPM is wrong format (de0aef3)
- 275 : Running de-client –stop-channel <channel> results in KeyError (59fb44e)

#### Full list of commits since version 1.6.0

```
d7ccd8a: doc: fix typo
ac48e50: updated release notes
de0aef3: Fix name to match expectations (#305)
59fb44e: postgresql: do not print stack trace for low level library (#309) (#310)
2162bbe: Setuptools uses entry return value as an error msg (#308)
b0fd9fb: 1.6.0 package backports (#302)
```

#### 1.1.4 Release 1.6.0

#### In this release:

- The logic engine has been rewritten in pure python. This removes the last C++ dependency the decision engine had. The build system has been updated accordingly.
- Migrated to setuptools package development library. This build system is the standard vanilla python build system
  provided with the python distribution. Build configurations have been updated and rpm packaging remains the
  primary distribution method.
- Completed logging implementation.

- Improvements in error handling and code coverage.
- Improvements in Jenkins and GitHub actions CI/CD pipelines.

#### Issues fixed in this release

- 44 : Logic Engine doesn't handle missing values gracefully (743effc)
- 253: Decision engine can sometimes start up at boot time before network name resolution is working (ae04db5)

#### Full list of commits since version 1.5.0

```
2551e07: More coverage for de-client (#296)
dde3945: Make sure actions either complete in time or die (#295)
381861c: Update Jenkins pipeline configuration (#292)
eb771f4: Try to cleanup Dockerfile PATH issue (#291)
780cb56: fix unittest doc
8680942 : update unittest documentation
8154b24 : Fixup sphinx doc (#290)
5f7e13a: enhancements in logging and error handling in dataspace dir (#283)
3d92725: Add missing runtime requirement (#286)
743effc: Allow conversion from errors to false values in logic-engine expressions. (#284)
124dcab: Inherit version from setuptools_scm if possible (#287)
3669803: added missing "" as line continuation
761f1d9: Drop invalid init.py
dc0e71b: migrate to setuptools (#264)
3b6f1bf: Make reaper reset state when starting from stopped proc (#280)
b2f9061: added ISO-8601 format to time in logging. changed name of function for better clarity. (#279)
0a74fe1: Improved DE client usage (#281)
ebf53e3: Added shutdown method to Publisher class (#278)
f95ab6d: Address some flake8/black reports (#274)
1c383b7: Automatically pull in our settings from about.py (#273)
e71f186: logging and error handling enhancements to taskmanager directory (#277)
7de9ab9: Increase Reaper log verbosity (#267)
019d245: Update actions to follow new best practices (#272)
b84e847 : Avoid possible sync issues in reaper startup (#271)
891975f: Remove vestigial C++ files. (#270)
42e5e1f: enhancements in logging and exception handling in newly added logicengine files (#265)
38effe6: Ensure the scheduler has started the thread before returning (#269)
db54fa1 : Start testing on PyPy with psycopg2cffi (#223)
```

#### decisionengine, Release 1.7.0

cc44058: Squashed commit of the following: (#263)

d6548e9: Enhanced logging in the logicengine directory files (#261)

c341bf7: Better match our workflow with codecov (#260)

1fbe44d: Use 'new' syntax for forward compat (#259)

2294b0b : Do a limited pin on version requirements (#256)

bcda470: Python implementation of logic engine (#246)

c6721b4: address comment on RB

ae04db5: Add Wants and After (network-online.target) dependency

1a96b14 : Fix action repodata

a70cee8: Move to CodeCov.io

7b16b4e: Add Wants and Requires dependencies (#258)

76c3670 : Move to CodeCov.io (#254)

e7ba013: Fix action repodata (#255)

d7e72f2: revert 3.9 test

b04154b: added 1.5.0 release notes

a03da29: remove 3.9 to see if documentatoin gets generated

#### 1.1.5 Release 1.5.0

#### In this release:

- Introduce data product query interface
- Cleanup of Ligic Engine code
- Improvements in error handling
- · Improvements in testing and CI

#### Issues fixed in this release

- 217, 218: Add option to de-client –print-product to only print the column names in a data block and-or to print one or more records in key/value format (fe7abcf)
- 240 : Logic Engine call leads to immediate taskmanager segfault exit (d855aa0)
- 239 : implement data product browsing interface (fe9faa9)

#### Full list of commits since version 1.4.1

```
d66c54b : Add PEP-0396 metadata (#243)
bfc91a6: More compat between psycopg2/psycopg2cffi (#248)
f5d31a6: Cleanup Fixture FIXME (#249)
Odfaf3c: Adding docker documentation (#251)
4b166a2 : Since we are python3 only now, drop python-six compat layer (#252)
fe7abcf: Add format support to de-client (#217) (#241)
df5a3d7: Add wheel support for easier testing (#247)
7de970d : Add place to inject env if need be (#242)
84e2930 : Fix race in test case (#250)
d855aa0: Fix fact-lookup to support duplicate names in separate rules. (#245)
51370fb: Resolve fixture 'quickstart' issue (#238)
3ea9129: Move from TravisCI to raw actions (#235)
fe9faa9: implement data product browsing interface (#239)
cf0f3c0: Add support to use custom base docker container to run tests (#234)
d91722f: Compat with psycopg2cffi (#233)
7d15a8c: Test failing source proxy. (#232)
b9a4bbb: Add debug logs for which threads are created #176 (#231)
6e6f4c9: Updated Jenkins configuration documentation (#229)
2d9fd7b: Log if config passed validation #117 (#230)
60c46d3: Self-test needs a real namespace to 'import numpy' in new python eval (#228)
a120077: Test that the doc actually builds during CI (#227)
4b6240a: Extend timeout for coverage combine (#226)
b059696: Update workflow per changes at github (#225)
7a71cac : Use newer compilers/runtimes (#224)
15ffd93: Add header for strict includes (#222)
71b141a: Add special PyPy only requirement (#221)
9dbb932: Move Python C extension to versioned .so file (#220)
ea7ade5: Migrate from boost-python to pybind11 (#215)
e6b2eae: Add python 3.9 to testing matrix (#219)
04c8f9c: Add the option to print columns types on de-client (#216)
8815dc6 : Logic-engine cleanups (#211)
086d0d5: fix missing back tick
54cc084: modified release notes
24744cf: Synchronize access to the task managers (#214)
87a7fda: replde dash with underscore
```

#### decisionengine, Release 1.7.0

743d0fd: try sphinx\_rtd\_theme

18c7909 : added 1.4.0 release notes

ff3d491: force docker pull when building the docker container to make sure to use an updated base layer (#210)

#### 1.1.6 Release 1.4.1

#### In this release:

• Bug fixes to 1.4.0 release

#### Issues fixed in this release

• 213 : de-client hangs under certain circumstances in version 1.4 and greater (race condition) (84ecfe2)

#### Full list of commits since version 1.4.0

9799b9a: update release version to 1.4.1

84ecfe2: Synchronize access to the task managers (#214)

751b6b8 : Address data races; remove need to sleep in unit tests (#205)

#### 1.1.7 Release 1.4.0

#### In this release:

- Improvements in error handling and client/server interactions
- Added log rotation by time
- Improvements in code coverage

#### Issues fixed in this release

- 153: Have de-client –print-product return different error message if product does not exist (18a950c)
- 171: yum update on decision engine rpm from python2 to python3 doesn't undo the symlinks (eb85c97)
- 188 : Channel debug info now leaks into startup.log (99d20a5)
- 208: Error when trying to run reaper in version 1.4.0 (84eccf3)

#### Full list of commits since version 1.3

84eccf3: Fix typo in reaper script. (#209)

d836abf: next RC

926944a: Fix coveralls reporting (#198) b95c323: Updating base Dockerfile (#199)

d302e31: Help jsonnet, which doesn't understand PosixPath objects. (#204)

2d791a7: Test configuration policies. (#197)

```
236e27a: Ensure items are returned in a stable order (#202)
e974f5f: add pylinit and pycodestyle (#203)
fbe7616: Test task manager (#196)
686ca80 : require more recent version of pytest-postgresql (#195)
99d20a5 : Fix double-logging problem. (#192)
4ce3d17: A set of fixtures to simplify unit tests (#183)
65f8052 : Fix typo (#190)
f3a4be8: Protect against None workers (#187)
ec310fb: remove py3 from package name
7006489: bump version to 1.4.0rc
158d835 : decisionengine/framework/modules: Fix SourceProxy retries (#184)
1356bf1 : Add support to test any branch in Jenkins (#182)
692fa8e : Add timeout support for unit test on Jenkins (#181)
e3d6e6a: Updated Jenkins documentation to take into account unit tests timeout parametr (#180)
2586a3e: Configuration redesign (#168)
fac984d: Fix error with DBUtils import. Looks like names of modules changed (#175)
7d661ee: Move postgres-specific implementation to postgres source. (#174)
eb85c97: Rpm (#173)
10fe843: Adding log rotation by time (#170)
a8d239b: Various improvements. (#167)
d9b92ee: Ignore vim's *.swp files (#166)
d9f72ef: Fix call to shutdown_timeout (and add sample entry to config) (#165)
3161795 : Add drops for items using tables being dropped (#164)
77d186d : Show output of test runtimes in travis (#163)
81820a4 : Allow server to start with no channels. (#161)
49879a6 : DE server and client usability improvements (#160)
de91c4f: Add tests to default and override config (#158)
14df1f6: Use python fallthrough for options (#159)
ac64a92: Drop python 2.7 integration tests since we are python3 only (#157)
d963301: Update Jenkins pipeline to properly test closing PR (#156)
64248cb : Merge 'runtime' tests into running channel tests (#150)
065ad77: Adding Jenkins pipeline documentation (#155)
18a950c: fix print-product to report non-existing product as such (#154)
6493735 : Fix invalid attribute name (#152)
d953c6a: Remove unnecessary set start method call (#149)
c8c9b65 : guarantee that process is killed so test never hang (#147)
```

```
f1542b6: Channel test (#146)

7f349a8: Fix faulty TaskManager state type (#145)

d50f1c4: fix logging regression introduced in f5e299969e0611e3480e9fa2782052df... (#142)

becfa26: Pass the correct type. (#144)

1a60daf: DecisionEngine: fix typo (#143)

9e7b867: Updating Jenkins pipeline configuration (#140)

e3a6703: fix regression introduced in f5e299969e0611e3480e9fa2782052df86d7c4ed (#141)

4900bc6: Restore runtime test. (#139)

0823f3d: Consolidate DE server/client tests into one file. (#138)

4f84435: A few more access fixes.

160cfd1: Fix task manager state access.

c00d819: A few more cleanups.

ec087e2: Various cleanups

a309ffe: Improvements to DE client CLI.
```

#### 1.1.8 Release 1.3.0

In this release:

- Introduced Jsonnet based configuration system
- · Improved logging
- Improved coverage of datasource

#### Full list of commits since version 1.2

```
239e82c: postgresql: improve SQL query (#133)
668eb1f: Update to make the code compatible with both python and JSON based config files (#129)
afd8837: Configuration-manager fixes (#128)
571e2be: Remove pip installed system python packages
407d9ed: Update Dockerfile
1fefc69: Implement unit tests for datablock.py (#122)
43c8d7a: Adjust global configuration to include program-option values. (#126)
2840813: Switch to Jsonnet configuration system (#125)
5c4ae0e: logging changes: added config file and command line interface (#124)
6697f22: Further config-manager testing and factorizations. (#123)
fa89fd0: Insulate multiprocessing test from parent environment. (#120)
139a537: Allow empty base directory for log file. (#119)
f14d40c: Factorize configuration-loading steps. (#118)
e00afee: Enhance testing and error reporting of ConfigManager (#117)
```

```
c3d1be3: Python 3 upgrades. (#116)
e7399af: Header fix (#114)
0456abf: Adding editor config file, see https://editorconfig.org/ (#115)
82112d1: Dockerfile: fetch osg 3.5 repo rpm (#113)
97c21b1: osg version 3.5 (#112)
33f28a8: Introduce jsonnet dependency (#110)
3f8b55e: improve server error handling (#108)
f15588e: added 1.2.0 release notes
b433325: Remove unnecessary 'main' functionality. (#107)
```

#### 1.1.9 Release 1.2.0

In this release:

- Swithed to python3
- · Improved coverage
- · Database data retention: added reaper to remove data older than configurable number of days
- · Improved logging

#### decisionengine

```
3dfe167: Jenkins pipeline improvements (#106)
22a7073: pull request for review request 137 (#105)
cafffb2: Make it possible to run code directly (for tests), and (#100)
802e98b: replace psycog2 witt psycopg2-binary (#101)
573ce8f: Jenkins pipeline improvements (#99)
9d08835 : Run coveralls even under failed state (#97)
bc1df4b: Add tests for PostgreSQL datasource (#71)
c1ac391: Fix missing py-modules.html (#96)
8dbfdee: Setup gh-pages doc workflow (#94)
cd4a01a : Doc (#93)
673080d: set version to 1.2.0 (for now). Supply conf file that corresponds to (#91)
f912225 : Db (#92)
dc8b68a: Add reaper to the RPC (#83) (#90)
29ade91: adding .Jenkinsfile with Jenkins pipeline configuration (#86)
c1dfe5c: Don't exclude E1004 from pylint, do exclude line breaks (#89)
440f949 : Fix varname (#88)
313d135 : Compress (#87)
6b8dc4b: Revert "Add reaper to the RPC (#83)"
```

```
dbea8e5: Update utils.sh so pytest will complete.
e848316: Update to postgresq111
7f4b805: Add reaper to the RPC (#83)
0ba2c51: remove astpp module and depedencies it pulls in (#81)
6b8eab9: don't track test coverage of tests (#80)
Oda18ec: made reaper.py executable
aca24a3: make reaper.py executable, make symbolic link to it from /usr/bin (#72)
0202acf: Implementation of data reaper (#70)
16b6be1: Simple changes for Python 3 deployment (#69)
fd2418c: Fix warnings caught by PEP-8 Speaks.
d16359b: Python 3 (and other) simplications.
3c7b6b7 : Only run Github Actions for python3.6 (#68)
453cbba: Update README.md
b27ed53: remove unnecessary (and atually harmful) python shebang (#66)
decisionengine modules
30d928b: clone version 1.2.0 of decisionengine
ae7c5a6: Jenkins pipeline improvements (#236)
310befd: T198 (#235)
a65886d: Fix import as reported in: https://github.com/HEPCloud/decisionengin... (#232)
93711cc: Run coveralls even if tests fail (#229)
03d763a: Jenkins pipeline improvements (#230)
f48d30f: Fix/223 (#228)
c8aa262 : github ticket 199 (#222)
0323bda: Address: https://github.com/HEPCloud/decisionengine_modules/issues/224 (#226)
62e4df6: Add support to run CI on Jenkins (#221)
5ab1541 : bump master version to 1.2.0 (for now) (#219)
bc19c65: decisionengine_modules/NERSC: Added retry loop for NERSC API Calls (#220)
41a50de : Sync up pep8speaks and run_pylint.sh with decisionengine settings (#218)
db4634f : silence pylint error (#217)
1b95141: Fix whitespace around operator error
746ea38: ignore W503
8a8b5f4: remove unused variable
a6668bf: fix PEP8 warnings
13773ee: address pep8 warnings
6bea4ca: silence pylint error
```

```
f589895: Pass sort=True parameter to fix future warning (#215)
```

a1d0507: fixing pep8 warning

a10bd17: debugging one import error ec501ad: make coveralls.io links work

deab1a7 : T201 (#204)

69f2645 : Add coveragerc

6d8a5f5: decisionengine\_modules/NERSC: Make Nersc API call backward-compatible with old config (#196)

a7e0af9: Only run Github Actions for python3.6 (#24)

#### 1.1.10 Release 1.1.0

#### In this release:

- Fixed. https://github.com/HEPCloud/decisionengine\_modules/issues/108 "Supply Postgres script to delete fields in main database before a certain date"
- significant code cleanup and pep8 compliance
- · unit test work
- CI (GitHub actions and Travis) is introduced

#### commits

f894b1d: Skip unittest (#77)

632e64b: Add ipython

f681a79: Make python 2.7 tests run on 1.1 branch

d6a32c0: implementation of data reaper (#75)

2ad8614: Use sparse checkout for first checkout to get .github/actions (#65)

812f032: Cat output of pytest log Exit pylint entrypoint with the line count of pep8 and pylint logs Deal with (detach

from  $\dots$ ) Only tar up (S)RPMS dirs for rpm build.

6b05ec7: Fix errors reported by run pylint (#62)

d9f5b66: Setup pep8speaks

c3b8ac2: Run github actions as non-root uid. Install packages in virtualenv and remove system rpms.

ae01f9e: Support Python 3 for Boost Python

579761c: Support Python 3 for Boost Python

044b979: Remove unnecessary using declarations.

00f6d00: Add extra header dependency due to Boost Python ommission.

24e0795 : Apply clang-format

17c17f9: Remove JSON dependency.

faa0b22: Massive cleanup.

07b555f: Updates to Github Actions to allow building with python3.6

fef6c11: Fix errors when running pylint.sh multiple times

da6f077: Autopep8 -i fixes

```
39fe5b3: TaskManager: fix calling log_exception with correct number of arguments and minor format changes to
reduce PEP8 warnings
17396da: logicengine: get rid of compuler warnings
01dc3d1: Only track what we need
b609d73: Configure coveralls (and some minor cleanup)
bd9ed5e: Many C++ cleanups
2a61876: Add Badges
c864f27: Do not call pytest fixtures directly.
307db5f: white space fix
882b58f: fix unit tests
1da687c: Replace Boost facilities with C++ STL ones.
5a6e6b1: Run tests on push
8404245 : Add missing Boost regex library dependency.
ceb5fe7: Apply clang-format to files that were missed earlier.
3de9940 : Apply clang-format to C++ code.
8a8f560: Cache venv directory instead
ad017ce: Build private boost for testing
928c64a: Test pip cache
358939a: Adjust CMakeLists.txt files to use correct Python versions
9f0ddb3: Add pylint github action.
5e6ce4a: Remove more unused C++ files.
63717fe: Setup travis to use new cmake var
74fab2a: Use cmake argumement -DPYVER=3.6 to build python3 library https://fermicloud140.fnal.gov/reviews/r/
31/
843f30c: Minor cleanups per travis-lint
a538cac: Remove unused C++ files.
4c9d125: Update repo where action is taken from
87fb2d9: Update rpms installed in docker image. Update entrypoint.sh to use cmake3.
199ee87: Find python3 libraries using cmake3 from epel rpm Also need to install python3-devel
4c79d2c: Remove unnused GNUmakefiles.
94342ee: Add unit test as a Github Action
1a0e102: more advanced travis.yml
0be413f: Add helper file for pip
7794327: Make recursive import happy
7005c78: Add simple target
de8b0fa: python3 compliance: replace string.join() where appropriate, handle UserDict
2662e6c: note required packages
```

3b87119: Add missing header includes.

3e79b84: Remove defunct code and its tests

b1dbe1a: Ensure attribs are defined at init

c4ad78a: Correct logger arguments do avoid duplicate string parse

a8dcc67: Remove unused imports (per pylint)

d3502b5: Remove obsolete CVS directories.

d744111 : add six module to the list of required modules

0a9b1e8: Fix class declaration

b83157e: Handle metaclasses

549f33b : Add config for Travis CI

ee71044: Drop trailing white space

3f82af6: Python3 forward compatible syntax

28bf291: Add safe (for python 2.7) python3 compatible syntax

1d1d76f: prepare for python3

TWO	

### **DEVELOPER DOCUMENTATION**

**CHAPTER** 

**THREE** 

### **JENKINS CI PIPELINE**

### 3.1 Decisionengine CI with Jenkins pipeline

Jenkins dashboard with Decisionengine framework CI results is available here.

A CI build is triggered any time a PR is created/closed or a commit is made to an existing PR. There are also *nightly CI builds* to test a list of predefined branches.

The Jenkins pipeline runs *pylint* and *unit\_tests* test suites alongside the *rpmbuild* stage.

The Jenkins dashboard looks like this:

On the bottom left side there is the list of recent CI builds that are named after the PR or the branch tested. On the bottom right side the dashboard shows for each CI build detailed status for each test suite.

Hovering the mouse over the status box for each CI build stage, a tool-tip with a button to access log details shows up.

Next to the build number the symbol <sup>1</sup> gives access to a menu with the list of artifacts stored for that build. Those artifacts include logs and the tarball with RPMs.

From the panel on the left side it is possible to access the PR on GitHub by clicking on the PR icon that looks like this 1.4142.

On occasion it could be useful to trigger a manual CI build to test a branch on the official DE GitHub repository or on

the user fork. For this purpose, on the top left panel the user can click on the Build with Parameters and this panel shows up

button.

## Pipeline decisionengine\_pipeline

This build requires parameters:

the user can modify these parameters to customize what code to test with the CI build.

The *DE\_REPO* parameter can point to the user fork or to the main repository.

The BRANCH parameter can point to the desired branch to test.

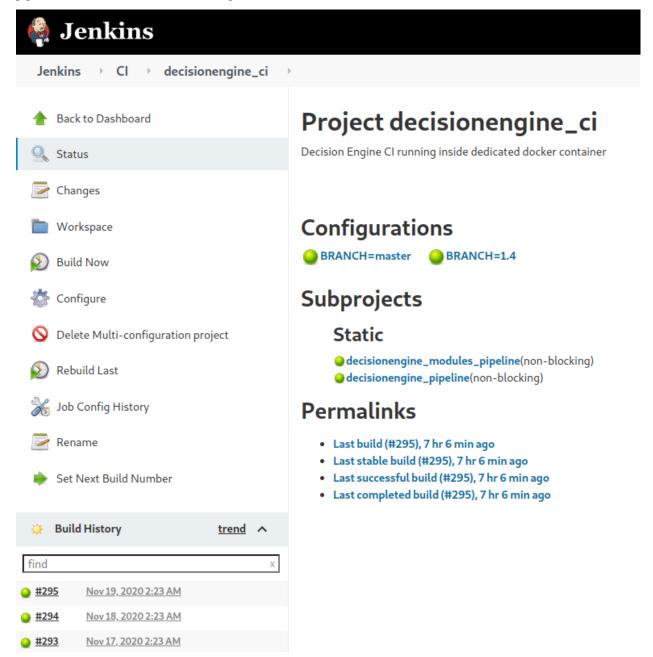

The PYTEST\_TIMEOUT parameter is the timeout in seconds for unit\_tests.

When ready, by clicking on the Build button, the CI build will start.

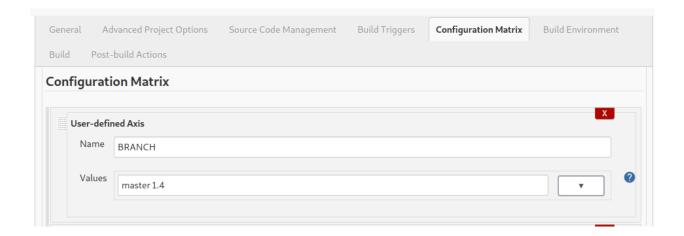

The pipeline configuration is part of the decisionengine repo.

#### 3.1.1 Nightly CI build configuration

The nightly CI build for Decisionengine framework uses this Jenkins project that triggers a CI build using the Jenkins pipeline described above to test a list of predefined branches.

Branches to test are defined using the project matrix as shown in the picture below. Each branch in the list (here *master* and *1.4*) spawns an independent CI build.

In the *Build* section of the configuration it is set the list of Jenkins subprojects to be triggered, in this case we have *decisionengine\_pipeline* and *decisionengine\_modules\_pipeline*.

The *Parameters* text box is used to override parameters of each Jenkins subproject with a custom value. In total this Jenkins project triggers 4 CI builds, i.e. 2 branches X 2 Jenkins subprojects.

Finally the *Build Triggers* section is used to setup the schedule for the periodic build, in this case it is scheduled to run at about 2 AM.

Jenkins will choose the actual time depending on the actual load on the system.

#### **Module contents**

#### **Submodules**

## decisionengine.framework.config.ChannelConfigHandler module

Manager of channel configurations.

The Channel ConfigHandler manages only channel configurations and not the global decision-engine configuration. It is responsible for loading channel configuration files and validating that the channels have the correct configuration artifacts and inter-module product dependencies.

class decisionengine.framework.config.ChannelConfigHandler.ChannelConfigHandler(global\_config, channel\_config\_dir)

Bases: object

\_load\_channel(channel\_name, path)

get\_channels()

load\_all\_channels()

Load all channel configurations inside the stored channel-configuration directory.

Any cached configurations will be dropped prior to reloading.

load\_channel(channel name)

Load a single configuration for a channel with the supplied name.

The behavior is to read a configuration file whose path is:

<cached channel config. dir>/{channel\_name}.jsonnet

where the cached channel-configuration directory was stored whenever the ChannelConfigHandler object was created, and {channel\_name} is the value of the supplied method argument.

print\_channel\_config(channel)

decisionengine.framework.config.ChannelConfigHandler.\_check\_keys(channel\_conf\_dict) check that channel config has mandatory keys: type data: dict

decisionengine.framework.config.ChannelConfigHandler.\_make\_de\_logger(global\_config)

## decisionengine.framework.config.ValidConfig module

ValidConfig represents a valid JSON document.

The decision engine requires each of its configuration files to be valid JSON. This is achieved by either supplying a valid Jsonnet or JSON document upfront, or by providing a Python dictionary that can be trivially converted to a JSON document.

Vetting of a file for JSON validity happens upon construction of a 'ValidConfig' object. A fully constructed 'Valid-Config' object thus corresponds to a valid JSON document.

 ${\bf class} \ \ {\bf decisionengine.framework.config.ValidConfig.ValidConfig} ({\it filename})$ Bases: collections.UserDict

ValidConfig represents a valid JSON configuration in the form of a dictionary.

In addition to the normal dictionary operations, users may call 'dump()' to print out in a string form the JSON configuration.

```
_abc_impl = <_abc._abc_data object>
dump()
```

Print dictionary data to a valid JSON string.

decisionengine.framework.config.ValidConfig.\_config\_from\_file(config\_file)

decisionengine.framework.config.ValidConfig.\_convert\_to\_json(config\_file)

Attempt to convert JSON non-compliant configuration into a compliant one.

This is a temporary facility to aid the migration of Python-based configurations to Jsonnet-based ones. Python dictionaries that are similar in structure to JSON documents are generally trivially convertible.

## decisionengine.framework.config.policies module

Decision-engine default configuration policies.

For the decision-engine process, the configuration policies are:

- The global configuration file must be named 'decision\_engine.jsonnet' and it must reside in (a) a directory that can be accessed through the 'CONFIG\_PATH' environment variable, or (b) the /etc/decisionengine directory.
- All channel configurations must reside in (a) a directory accessible through the 'CHANNEL\_CONFIG\_PATH' environment variable, or (b) a 'config.d' subdirectory of the /etc/decisionengine directory.

The utilities provided in this module provide simple means of accessing the configuration artifacts according to the policies listed above. Please consult the documentation for each function below for more detailed information.

```
decisionengine.framework.config.policies.channel_config_dir(parent_dir=None)

Retrieve the channel configuration directory as a pathlib.Path object.
```

This function returns a path object according to the following precedence rules:

- 1. If the 'parent\_dir' argument is provided, the returned path object will correspond to '{parent\_dir}/config.d'.
- 2. If the 'CHANNEL\_CONFIG\_PATH' environment variable has been set, the returned path object will correspond to \${CHANNEL\_CONFIG\_PATH}.
- 3. If neither 1 or 2 apply, the returned path object corresponds to '{global\_config\_dir()}/config.d' (see documentation for 'global\_config\_dir()').

Regardless of the precedence rule used, the returned path object must be a valid directory or an exception will be raised—i.e. if the 'parent\_dir' argument is supplied, and the resulting path object is not a valid directory, the function will exit with an exception and not attempt rule 2 or 3.

```
decisionengine.framework.config.policies.global_config_dir()
```

Retrieve global configuration dir as pathlib.Path object.

This is the directory that houses the 'decision\_engine.jsonnet' global configuration file.

This function checks that the 'CONFIG\_PATH' variable has been set or will use /etc/decisionengine otherwise. If the path exists as a directory, then the directory path is returned as a string; otherwise an exception is raised.

```
decisionengine.framework.config.policies.global_config_file(parent_dir=None)
```

Return the pathlib.Path object corresponding to the global configuration.

If supplied, the 'parent\_dir' is assumed to be the full path corresponding to a directory containing the 'decision\_engine.jsonnet' file. If not provided, the global configuration directory is determined based on the behavior of the 'global\_config\_dir()' function.

An exception is raised if no 'decision\_engine.jsonnet' file is found.

```
decisionengine.framework.config.policies.valid_dir(path, scope)
```

Throws if the supplied path object is not a directory, otherwise returns the path object.

decisionengine.framework.dataspace.datasources.sqlalchemy\_ds.datasource\_api module

The datasource layer for our abstraction

```
class decisionengine.framework.dataspace.datasources.sqlalchemy_ds.datasource_api.SQLAlchemyDS(config_dice
     Bases: decisionengine.framework.dataspace.datasource.DataSource
     A DecisionEngine data source via the SQL Alchemy ORM
          "dataspace": {
              "datasource": { "module":
                                            "decisionengine.framework.dataspace.datasources.sqlalchemy_ds",
                  "name": "SQLAlchemyDS", "params": {
                    "pool_size": 5, "max_overflow": 10, "timeout": 30,
                    # url is mandatory, but any engine keyword is accepted here.
                                                                                         "url":
                                                                                                 "di-
                    alect[+driver]://user:password@host/dbname"
          }
     }
     Exceptions should be caught and logged by the caller.
     _abc_impl = <_abc._abc_data object>
     close()
          Close all connections to the database
              Returns None
     connect()
          Create a pool of database connections
```

Returns None

### create\_tables()

Create database tables

Returns None

## delete\_data\_older\_than(days)

Delete data older that interval

**Parameters days** (int) – remove data older than this many days

Returns None

## duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to clone
- **new\_generation\_id** (int) generation id to create

Returns None

## get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate

Returns with all set keys and their associated values

Return type dict

### get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate
- $\mathbf{key}$  ( $\mathbf{str}$ ) key for the value

**Returns** The possibly binary value stored earlier

Return type obj

## get\_dataproducts(taskmanager\_id, key=None)

Return list of all data products associated with with taskmanager\_id

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **key** (str) key for the value

**Returns** each element is the matching row as a dict()

**Return type** tuple

## get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (int) generation id to locate
- **key** (*str*) key for the value

#### Returns

**fields in order are:** taskmanager.taskmanager\_id, header.taskmanager\_id, header.generation\_id, header.key, header.create\_time, header.scheduled\_create\_time, header.creator, header.schema\_id header.expiration\_time,

### Return type tuple

## get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

- $taskmanager_name (str)$  name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

**Returns** the largest generation stored within the database

## Return type int

## get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate
- $\mathbf{key}$  ( $\mathbf{str}$ ) key for the value

#### Returns

**fields in order are:** taskmanager.taskmanager\_id, metadata.taskmanager\_id, metadata.generation\_id, metadata.key, metadata.state, metadata.generation\_time, metadata.missed\_update\_count

## Return type tuple

### get\_schema(table=None)

Given the table name return it's schema

#### get\_taskmanager (taskmanager name, taskmanager id=None)

Find the task manager by name/uuid in the database get back the primary key.

If multiples match, find highest primary key.

#### **Parameters**

- taskmanager\_name (str) name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

**Returns** the matching row, column names as keys

## Return type dict

## $\verb|get_taskmanagers| (taskmanager_name=None, start\_time=None, end\_time=None)|$

Find taskmanagers that meet our search

#### **Parameters**

- **taskmanager\_name** (*str*) name of taskmanager to retrieve
- **start\_time** (*datetime*) Datetime to confine against
- end\_time (datetime) Datetime to confine against

**Returns** each element is a dict() matching row, column names as keys

#### Return type list

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to create
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

#### Returns None

#### reset\_connections()

Reset the connection to the database. So long as self.engine isn't undef, the engine can still make new connections if new db actions happen. It just wont have any open at this time.

## Returns None

store\_taskmanager(name, taskmanager\_id, datestamp=None)

Store TaskManager in database

#### **Parameters**

- name (str) name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- datestamp (datetime) datetime of created object, defaults to 'now'

**Returns** the primary key of the row in the database

## Return type int

**update**(taskmanager id, generation id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- $taskmanager\_id(str/uuid)$  id of taskmanager to retrieve
- **generation\_id** (int) generation id to update
- **key** (str) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

#### Returns None

## decisionengine.framework.dataspace.datasources.sqlalchemy\_ds.db\_schema module

The table layout and utilities for our SOLAlchemy ORM class decisionengine.framework.dataspace.datasources.sqlalchemy\_ds.db\_schema.Base(\*\*kwargs) Bases: object The base class of the class hierarchy. When called, it accepts no arguments and returns a new featureless instance that has no instance attributes and cannot be given any. \_sa\_registry = <sqlalchemy.orm.decl\_api.registry object> metadata = MetaData() registry = <sqlalchemy.orm.decl\_api.registry object> class decisionengine.framework.dataspace.datasources.sqlalchemy\_ds.db\_schema.Dataproduct(\*\*kwargs) Bases: sqlalchemy.orm.decl\_api.Base The PRIMARY KEY on this table isn't used.... Existing code appears to depend on column order. \_sa\_class\_manager = {'generation\_id': <sqlalchemy.orm.attributes.InstrumentedAttribute object>, 'id': <sqlalchemy.orm.attributes.InstrumentedAttribute object>, 'key': <sqlalchemy.orm.attributes.InstrumentedAttribute object>, 'taskmanager': <sqlalchemy.orm.attributes.InstrumentedAttribute object>, 'taskmanager\_id': <sqlalchemy.orm.attributes.InstrumentedAttribute object>, 'value': <sqlalchemy.orm.attributes.InstrumentedAttribute object>} generation\_id id kev taskmanager taskmanager\_id value class decisionengine.framework.dataspace.datasources.sqlalchemy\_ds.db\_schema.Header(\*\*kwargs) Bases: sqlalchemy.orm.decl\_api.Base The PRIMARY KEY on this table isn't used.... The existing code has a hard expectation on the time columns being BIGINT rather than datetime objects burried within the classes.

Looks like there was an inital goal of a relationship with the Schema table, but it may not be in use

Existing code appears to depend on column order.

```

### get\_datablock(taskmanager id, generation id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate

Returns with all set keys and their associated values

## Return type dict

## get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to locate
- **key** (*str*) key for the value

**Returns** The possibly binary value stored earlier

## Return type obj

## get\_dataproducts(taskmanager\_id, key=None)

Return list of all data products associated with with taskmanager\_id

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **key** (*str*) key for the value

**Returns** each element is the matching row as a dict()

## Return type tuple

## get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- $generation_id(int)$  generation id to locate
- **key** (*str*) key for the value

#### **Returns**

```
fields in order are: taskmanager.taskmanager_id, header.generation_id, header.key, header.create_time, header.scheduled_create_time, header.creator, header.schema_id header.expiration_time,
```

## Return type tuple

## get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

- $taskmanager_name (str)$  name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

Returns the largest generation stored within the database

#### Return type int

## get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (int) generation id to locate
- **key** (*str*) key for the value

#### Returns

**fields in order are:** taskmanager.taskmanager\_id, metadata.taskmanager\_id, metadata.generation\_id, metadata.key, metadata.state, metadata.generation\_time, metadata.missed\_update\_count

## Return type tuple

### get\_schema(table=None)

Given the table name return it's schema

## get\_taskmanager\_id=None)

Find the task manager by name/uuid in the database get back the primary key.

If multiples match, find highest primary key.

#### **Parameters**

- **taskmanager\_name** (*str*) name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve

**Returns** the matching row, column names as keys

### Return type dict

get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Find taskmanagers that meet our search

## **Parameters**

- $taskmanager_name(str)$  name of taskmanager to retrieve
- **start\_time** (*datetime*) Datetime to confine against
- end\_time (datetime) Datetime to confine against

**Returns** each element is a dict() matching row, column names as keys

## Return type list

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (*int*) generation id to create
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary

- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

#### Returns None

#### reset\_connections()

Reset the connection to the database. So long as self.engine isn't undef, the engine can still make new connections if new db actions happen. It just wont have any open at this time.

#### Returns None

store\_taskmanager(name, taskmanager\_id, datestamp=None)

Store TaskManager in database

#### **Parameters**

- name (str) name of taskmanager to retrieve
- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- datestamp (datetime) datetime of created object, defaults to 'now'

**Returns** the primary key of the row in the database

## Return type int

update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (str/uuid) id of taskmanager to retrieve
- **generation\_id** (int) generation id to update
- **key** (*str*) key for the value
- value (obj) Value can be an object or dict or a binary
- header (datablock.Header) Header for the value
- metadata (datablock.Metadata) Metadata for the value

Returns None

## decisionengine.framework.dataspace.datasources.tests package

## **Submodules**

## decisionengine.framework.dataspace.datasources.tests.fixtures module

pytest fixtures/constants

decisionengine.framework.dataspace.datasources.tests.fixtures.PG\_DB\_WITHOUT\_SCHEMA(request:

\_pytest.fixtures.Fixture

 $\rightarrow$ 

psycopg2.extensions.c

Fixture factory for PostgreSQL.

Parameters request – fixture request object

Returns postgresql client

decisionengine.framework.dataspace.datasources.tests.fixtures.**PG\_DE\_DB\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_*. Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

decisionengine.framework.dataspace.datasources.tests.fixtures.PG\_PROG(request:

\_pytest.fixtures.FixtureRequest, tmpdir\_factory: \_pytest.tmpdir.TempdirFactory) →

Iterator[pytest\_postgresql.executor.PostgreS

\_

Process fixture for PostgreSQL.

Parameters request – fixture request object

Returns tcp executor

- decisionengine.framework.dataspace.datasources.tests.fixtures.**SQLALCHEMY\_PG\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITH* Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.
- decisionengine.framework.dataspace.datasources.tests.fixtures.SQLALCHEMY\_TEMPFILE\_SQLITE(tmp\_path) Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.
- decisionengine.framework.dataspace.datasources.tests.fixtures.datasource(request)

  This parameterized fixture will setup up various datasources.

Add datasource objects to DATASOURCES\_TO\_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.datasources.tests.fixtures.mock\_data\_block()
This fixture replaces the standard datablock implementation.

The current DataBlock implementation does not own any data products but forwards them immediately to a backend datasource. The only implemented datasource requires Postgres, which is overkill when needing to test simple data-product communication between modules.

This mock datablock class directly owns the data products, thus avoiding the need for a datasource backend. It is anticipated that a future design of the DataBlock will own the data products, thus making this mock class unnecessary.

## decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api module

This test plan covers a generic dataspace object via pytest parameters.

- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_create\_tables(datasource) create\_tables() should be safe to call multiple times
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_delete\_data\_older\_than\_are Can we delete old entries
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_duplicate\_datablock(dataso Can we duplicate taskmanager1 and all its entries
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_datablock(datasource)
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproduct(datasource)

  Can we get the dataproduct by uuid with key

- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproduct\_not\_exist Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproducts(datasource Can we get the dataproducts by uuid and uuid with key
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_dataproducts\_not\_exis Does it error out if we ask for bogus information?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_header(datasource)

  Can we fetch a header?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_header\_not\_exist(datas Does it error out if we ask for a bogus header?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_last\_generation\_id(dataspace). Can we get the last generation id by name or name and uuid

decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_last\_generation\_id\_no

- Does it error out if we ask for a bogus taskmanager?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_metadata(datasource)

  Can we fetch a metadata element?
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanager\_exists(datasource\_api test\_get\_taskmanager\_exists).
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanager\_not\_exist
  This should error out
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanagers(datasourceCan I get multimple task managers

decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_get\_taskmanagers\_not\_exis

- Do I error out when asking for garbage
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_has\_config(datasource)

  This should have a config dict we can pass to jsonnet
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_insert(datasource)

  Can we insert new elements
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_reset\_connections(datasource reset\_connections() should be safe to call any time
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_store\_taskmanager(datasource\_api .test\_store\_taskmanager(datasource\_api .test\_store\_taskmanager(
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_update(datasource)

  Do updates work as expected
- decisionengine.framework.dataspace.datasources.tests.test\_datasource\_api.test\_update\_bad(datasource)

  Do updates fail to work on bogus taskmanager as expected

## decisionengine.framework.dataspace.datasources.tests.test postgresql module

decisionengine.framework.dataspace.datasources.tests.test\_postgresql.test\_generate\_insert\_query()

#### Module contents

### **Submodules**

## decisionengine.framework.dataspace.datasources.null module

## class decisionengine.framework.dataspace.datasources.null.NullDataSource(config\_dict)

Bases: decisionengine.framework.dataspace.datasource.DataSource

Implementation of data source ABC that does nothing

```
_abc_impl = <_abc._abc_data object>
```

close()

Close all connections to the database

connect()

Create a pool of database connections

create\_tables()

Create database tables

## delete\_data\_older\_than(days)

Delete data older that interval :type days: long :arg days: remove data older than interval

duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- new\_generation\_id (int) generation\_id of the new datablock created

## get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data

 ${\tt get\_dataproduct}(\textit{taskmanager\_id}, \textit{generation\_id}, \textit{key})$ 

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value

#### get\_dataproducts(taskmanager id, key=None)

Return list of all data products associated with with taskmanager\_id

Parameters key (string) – data product key

## get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

- taskmanager\_name (string) task manager name
- taskmanager\_id (string) task manager id

## get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation id of the data
- **key** (string) key for the value

## get\_schema(table=None)

Given the table name return it's schema

Parameters table (string) – Name of the table

#### get\_taskmanager(taskmanager\_name, taskmanager\_id=None)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

## get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Retrieve TaskManagers :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager id, generation id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- $generation\_id$  (int)  $generation\_id$  of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

### reset\_connections()

Drop any cached connections and reconnect to the database

#### **store\_taskmanager**(name, taskmanager id, datestamp=None)

Store TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve :type datestamp: datetime :arg datestamp: datetime of created object, defaults to 'now'

update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

## decisionengine.framework.dataspace.datasources.postgresql module

```
class decisionengine.framework.dataspace.datasources.postgresql.Postgresql(config dict)
     Bases: decisionengine.framework.dataspace.datasource.DataSource
     Implementation of postgresql data source
     __query(query_string, values=None, cursor_factory=None)
     _abc_impl = <_abc._abc_data object>
     _delete(sql_query, values=None)
     _insert(table_name_or_sql_query, record=None)
     _insert_returning_result(table_name_or_sql_query, record=None)
     _remove(sql_query, values=None)
     _select(query string, values=None, cursor factory=None)
     _select_dictresult(sql_query, values=None)
     _select_getresult(sql_query, values=None)
     _select_tuple(sql_query, values)
     _update(query string, values=None)
     _update_returning_result(query string, values=None)
     close()
          Close all connections to the database
     connect()
          Create a pool of database connections
     create_tables()
          Create database tables
     delete_data_older_than(days)
```

Delete data older that days interval :type days: int :arg days: remove data older than days interval

## duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

## **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- new\_generation\_id (int) generation\_id of the new datablock created

### get\_connection()

#### get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data

## get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## get\_dataproducts(taskmanager\_id, key=None)

Return list of all data products associated with with taskmanager\_id

Parameters key (string) – data product key

### get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value

## get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task manager id.

#### **Parameters**

- taskmanager\_name (string) task manager name
- taskmanager\_id (string) task manager id

## get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

```
get_schema(table=None)
```

Given the table name return it's schema

**Parameters table** (string) – Name of the table

### get\_taskmanager(taskmanager\_name, taskmanager\_id=None)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

#### get\_taskmanagers(taskmanager name=None, start time=None, end time=None)

Retrieve TaskManagers :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

#### reset\_connections()

Drop any cached connections and reconnect to the database

### store\_taskmanager(name, taskmanager\_id, datestamp=None)

Store TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve :type datestamp: datetime :arg datestamp: datetime of created object, defaults to 'now'

```
tables = {'dataproduct': ['taskmanager_id TEXT', 'generation_id INT', 'key TEXT',
'value BLOB'], 'header': ['taskmanager_id TEXT', 'generation_id INT', 'key TEXT',
'create_time REAL', 'expiration_time REAL', 'scheduled_create_time REAL', 'creator
TEXT', 'schema_id INT'], 'metadata': ['taskmanager_id TEXT', 'generation_id INT',
'key TEXT', 'state TEXT', 'generation_time REAL', 'missed_update_count INT'],
'schema': ['schema_id INT', 'schema BLOB']}
```

update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- **value** (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

 ${\tt decisionengine.framework.dataspace.datasources.postgresql.} {\tt generate\_insert\_query} ({\tt table\_name}, \\ {\tt keys})$ 

Generate insert query given table name and list of fields

#### **Parameters**

- table\_name (str) Name of the table to insert into
- **keys** List of column names

Keys list

Return type str - insert query

#### **Module contents**

## decisionengine.framework.dataspace.tests package

#### **Submodules**

## decisionengine.framework.dataspace.tests.fixtures module

decisionengine.framework.dataspace.tests.fixtures.PG\_DB\_WITHOUT\_SCHEMA(request:

\_pytest.fixtures.FixtureRequest)

 $\rightarrow$ 

psycopg2.extensions.connection

Fixture factory for PostgreSQL.

Parameters request – fixture request object

Returns postgresql client

decisionengine.framework.dataspace.tests.fixtures.**PG\_DE\_DB\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*) Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

decisionengine.framework.dataspace.tests.fixtures.**PG\_PROG**(request: \_pytest.fixtures.FixtureRequest, tmpdir\_factory:

 $\_pytest.tmpdir.TempdirFactory) \rightarrow$ 

Iterator[pytest\_postgresql.executor.PostgreSQLExecutor]

Process fixture for PostgreSQL.

Parameters request – fixture request object

Returns tcp executor

decisionengine.framework.dataspace.tests.fixtures.**SQLALCHEMY\_PG\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*) Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.dataspace.tests.fixtures.**SQLALCHEMY\_TEMPFILE\_SQLITE**(*tmp\_path*)
Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.dataspace.tests.fixtures.datasource(request)

This parameterized fixture will setup up various datasources.

Add datasource objects to DATASOURCES\_TO\_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.tests.fixtures.dataspace(request)

This parameterized fixture will setup up various datasources. Add datasource objects to DATA-SOURCES\_TO\_TEST once they've got our basic schema loaded. And adjust our *if* statements here until we are SQLAlchemy only.

Pytest should take it from there and automatically run it through all the tests using this fixture.

decisionengine.framework.dataspace.tests.fixtures.load\_sample\_data\_into\_datasource(schema\_only\_db) load our sample test data into a dataspace This is a function not a fixture so you can run it on any datasource providing the right API.

### decisionengine.framework.dataspace.tests.test Reaper module

```
decisionengine.framework.dataspace.tests.test_Reaper.config()
decisionengine.framework.dataspace.tests.test_Reaper.reaper(request)
decisionengine.framework.dataspace.tests.test_Reaper.test_fail_bad_config(reaper, config)
decisionengine.framework.dataspace.tests.test_Reaper.test_fail_missing_config(reaper,
                                                                               config)
decisionengine.framework.dataspace.tests.test_Reaper.test_fail_missing_config_key(reaper,
decisionengine.framework.dataspace.tests.test_Reaper.test_fail_small_retain(reaper)
decisionengine.framework.dataspace.tests.test_Reaper.test_fail_small_run_interval(reaper)

  Can we insert new elements
- decisionengine.framework.dataspace.tests.test\_dataspace.test\_store\_taskmanager(dataspace)

  Can we make new entries

decisionengine.framework.dataspace.tests.test\_dataspace.test\_update\_bad(dataspace)

Do updates fail to work on bogus taskmanager as expected

#### **Module contents**

## **Submodules**

## decisionengine.framework.dataspace.datablock module

# duplicate()

Duplicate the datablock and return this new DataBlock. The intent is that at the point the duplication occurs there is only information from the sources in the DataBlock. This also increments the generation\_id of this DataBlock.

TODO: Also update the header and the metadata information TODO: Make this threadsafe

```
Return type DataBlock
```

\_setitem(key, value, header, metadata=None)

```
get(key, default=None)
```

Return the value associated with the key in the database

put a product in the database with header and metadata

Return type dict

```
get_dataproducts(key=None)
```

## get\_header(key)

Return the Header associated with the key in the database

Return type Header

### get\_metadata(key)

Return the metadata associated with the key in the database

Return type Metadata

## get\_taskmanager(taskmanager\_name, taskmanager\_id=None)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve :rtype: :obj: dict

```
The dictionary returned looks like: {'datestamp': datetime.datetime(2017, 12, 20, 17, 37, 17, 503210,
                 tzinfo=psycopg2.tz.FixedOffsetTimezone(offset=-360, name=None)),
              'sequence_id': 135L, 'name': 'AWS_Calculations', 'taskmanager_id': '77B16EB5-C79E-45B0-
              B1B1-37E846692E1D'}
     is_expired(key=None)
          Check if the dataproduct for a given key or any key is expired
     keys()
     mark_expired(expiration_time)
          Set the expiration_time for the current generation of the dataproduct and mark it as expired if expira-
          tion time <= current time
     put(key, value, header, metadata=None)
          Put data into the DataBlock
     store_taskmanager(taskmanager name, taskmanager id)
          Persist TaskManager, returns sequence number :type taskmanager_name: string :type taskmanager_id:
          :obj: string :rtype: int
class decisionengine.framework.dataspace.datablock.Header(taskmanager_id, create_time=None,

```

class decisionengine.framework.dataspace.datablock.ProductRetriever(product\_name,

product\_type,
product source)

Bases: object

decisionengine.framework.dataspace.datablock.compress(obj)

Compress python object :param obj: python object :return: compressed object

decisionengine.framework.dataspace.datablock.decompress(zbytes)

Decompress zipped byte stream, convert to string. :param zbytes: byte stream :return: uncompressed string

decisionengine.framework.dataspace.datablock.zdumps(obj)

Pickle and compress :param obj: a python object :return: compressed string

decisionengine.framework.dataspace.datablock.zloads(zbytes)

Decompress and unpickle If input is not compressed attempts to just unpickle it

**Parameters zbytes** – compressed bytes

Returns returns python object

## decisionengine.framework.dataspace.datasource module

class decisionengine.framework.dataspace.datasource.DataSource(config)

Bases: object

\_abc\_impl = <\_abc.\_abc\_data object>

abstract close()

Close all connections to the database

abstract connect()

Create a pool of database connections

abstract create\_tables()

Create database tables

dataproduct\_table = 'dataproduct'

Name of the dataproduct table

abstract delete\_data\_older\_than(days)

Delete data older that interval :type days: long :arg days: remove data older than interval

 $\textbf{abstract duplicate\_datablock}(\textit{taskmanager\_id}, \textit{generation\_id}, \textit{new\_generation\_id})$ 

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- new\_generation\_id (int) generation\_id of the new datablock created

abstract get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data

#### **abstract get\_dataproduct**(*taskmanager id*, *generation id*, *key*)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## abstract get\_dataproducts(taskmanager\_id, key)

Return list of all data products associated with with taskmanager\_id

**Parameters key** (string) – data product key

## abstract get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

### **abstract get\_last\_generation\_id**(*taskmanager\_name*, *taskmanager\_id=None*)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

- taskmanager\_name (string) task manager name
- taskmanager\_id (string) task manager id

## abstract get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager id, generation id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## abstract get\_schema(table=None)

Given the table name return it's schema

Parameters table (string) – Name of the table

### abstract get\_taskmanager(taskmanager name, taskmanager id)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

## abstract get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Retrieve TaskManagers :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

### header\_table = 'header'

Name of the header table

## abstract insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- **header** (Header) Header for the value
- **header** Metadata for the value

#### metadata\_table = 'metadata'

Name of the metadata table

#### abstract reset\_connections()

Drop any cached connections and reconnect to the database

abstract store\_taskmanager(taskmanager\_name, taskmanager\_id, datestamp=None)

Store TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve :type datestamp: datetime :arg datestamp: datetime of created object, defaults to 'now'

## taskmanager\_table = 'taskmanager'

Name of the taskmanager table

abstract update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

### decisionengine.framework.dataspace.dataspace module

# $\textbf{class} \ \ \textbf{decisionengine.framework.dataspace.dataspace.DataSpace} (\textit{config})$

Bases: object

DataSpace class is collection of datablocks and provides interface to the database used to store the actual data

```
close()
```

```
delete(taskmanager_id, all_generations=False)
```

duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

 ${\tt get\_datablock}(\textit{taskmanager\_id}, \textit{generation\_id})$ 

get\_dataproduct(taskmanager\_id, generation\_id, key)

get\_dataproducts(taskmanager\_id, key=None)

get\_header(taskmanager\_id, generation\_id, key)

get\_last\_generation\_id(taskmanager name, taskmanager id=None)

```
get_metadata(taskmanager_id, generation_id, key)
     get_taskmanager(taskmanager_name, taskmanager_id=None)
     get_taskmanagers(taskmanager_name=None, start_time=None, end_time=None)
     insert(taskmanager_id, generation_id, key, value, header, metadata)
     mark_demented(taskmanager id, keys, generation id=None)
     mark_expired(taskmanager id, generation id, key, expiry time)
     store_taskmanager(name, taskmanager_id, datestamp=None)
     update(taskmanager_id, generation_id, key, value, header, metadata)
exception decisionengine.framework.dataspace.dataspace.DataSpaceConfigurationError
     Bases: Exception
     Errors related to database access
exception decisionengine.framework.dataspace.dataspace.DataSpaceConnectionError
     Bases: Exception
     Errors related to database access
\textbf{exception} \ \ \text{decisionengine.} framework. data space. data space. \textbf{DataSpaceError}
     Bases: Exception
     Errors related to database access
exception decisionengine.framework.dataspace.dataspace.DataSpaceExistsError
     Bases: Exception
     Errors related to database access
decisionengine.framework.dataspace.maintain module
class decisionengine.framework.dataspace.maintain.Reaper(config)
     Bases: object
     Reaper provides functionality of periodic deletion of data older than retention interval in days
     The class attributes indicate a rational set of defaults that shouldn't be altered by user configuration.
     MIN_RETENTION_INTERVAL_DAYS = 7
     MIN_SECONDS_BETWEEN_RUNS = 7080
     _reaper_loop(delay)
          The thread actually runs this.
     reap()
          Actually spawn the query to delete the old records. Lock the state as this task doesn't have a cancel option.
     property retention_interval
          We have data constraints, so use a property to track
     property seconds_between_runs
          We have data constraints, so use a property to track
     start(delay=0)
          Start thread with an optional delay to start the thread in X seconds
```

```
stop()
```

Try to stop the reaper, will block if the reaper cannot be interupted.

#### **Module contents**

decisionengine.framework.engine package

## **Subpackages**

decisionengine.framework.engine.tests package

### **Submodules**

decisionengine.framework.engine.tests.fixtures module

pytest defaults

A DE Server using a private database

decisionengine.framework.engine.tests.fixtures.PG\_DB\_WITHOUT\_SCHEMA(request:

 $\_pytest.fixtures.FixtureRequest)$   $\rightarrow$ 

psycopg2.extensions.connection

Iterator[pytest\_postgresql.executor.PostgreSQLExecutor]

Fixture factory for PostgreSQL.

Parameters request - fixture request object

Returns postgresql client

decisionengine.framework.engine.tests.fixtures.**PG\_DE\_DB\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*) Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

decisionengine.framework.engine.tests.fixtures. $PG_PROG(request: \_pytest.fixtures.FixtureRequest, tmpdir\_factory: \_pytest.tmpdir.TempdirFactory) <math>\rightarrow$ 

Process fixture for PostgreSQL.

Parameters request – fixture request object

**Returns** top executor

decisionengine.framework.engine.tests.fixtures.**SQLALCHEMY\_PG\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*)

Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.engine.tests.fixtures.**SQLALCHEMY\_TEMPFILE\_SQLITE**(*tmp\_path*)

Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

## decisionengine.framework.engine.tests.test\_client\_only module

```
decisionengine.framework.engine.tests.test_client_only.test_client_err_returned_as_rc()

decisionengine.framework.engine.tests.test_startup.test_default_config()
```

#### **Module contents**

#### **Submodules**

## decisionengine.framework.engine.DecisionEngine module

Main loop for Decision Engine. The following environment variable points to decision engine configuration file: DECISION\_ENGINE\_CONFIG\_FILE if this environment variable is not defined the DE-Config.py file from the ``../tests/etc/ directory will be used.

```
{\bf class} \ \ {\bf decisionengine.framework.engine.DecisionEngine.DecisionEngine} (global\_config, \\ channel\_config\_loader, \\ server\_address) \\ {\bf Bases: socketserver.ThreadingMixIn, xmlrpc.server.SimpleXMLRPCServer} \\ \_{\bf dataframe\_to\_column\_names} (df)
```

```
_dataframe_to_csv(df)
_dataframe_to_json(df)
_dataframe_to_table(df)
_dataframe_to_vertical_tables(df)
_dispatch(method, params)
    Dispatches the XML-RPC method.
```

XML-RPC calls are forwarded to a registered function that matches the called XML-RPC method name. If no such function exists then the call is forwarded to the registered instance, if available.

If the registered instance has a \_dispatch method then that method will be called with the name of the XML-RPC method and its parameters as a tuple e.g. instance.\_dispatch('add',(2,3))

If the registered instance does not have a \_dispatch method then the instance will be searched to find a matching method and, if found, will be called.

Methods beginning with an '\_' are considered private and will not be called.

```
block_until(state, timeout=None)
block_while(state, timeout=None)
get_logger()
handle_sighup(signum, frame)
reaper_start(delay)
reaper_status()
reaper_stop()
rm_channel(channel, maybe_timeout)
rpc_block_while(state_str, timeout=None)

rpc_get_log_level()
rpc_kill_channel(channel, timeout=None)
rpc_print_product(product, columns=None, query=None, types=False, format=None)
rpc_print_products()
rpc_query_tool(product, format=None, start_time=None)
rpc_reaper_start(delay=0)
    Start the reaper process after 'delay' seconds. Default 0 seconds delay. :type delay: int
rpc_reaper_status()
rpc_reaper_stop()
rpc_rm_channel(channel, maybe_timeout)
rpc_set_channel_log_level(channel, log_level)
    Assumes log_level is a string corresponding to the supported logging-module levels.
rpc_show_config(channel)
    Show the configuration for a channel.
```

```
rpc_show_de_config()
     rpc_start_channel(channel_name)
     rpc_start_channels()
     rpc_status()
     rpc_stop()
     rpc_stop_channel(channel)
     rpc_stop_channels()
     start_channel(channel_name, channel_config)
     start_channels()
     stop_channels()
     stop_worker(worker, timeout)
class decisionengine.framework.engine.DecisionEngine.RequestHandler(request, client_address,
                                                                           server)
     Bases: xmlrpc.server.SimpleXMLRPCRequestHandler
     rpc_paths = ('/RPC2',)
class decisionengine.framework.engine.DecisionEngine.StopState(value)
     Bases: enum. Enum
     An enumeration.
     Clean = 2
     NotFound = 1
     Terminated = 3
decisionengine.framework.engine.DecisionEngine._channel_preamble(name)
decisionengine.framework.engine.DecisionEngine._create_de_server(global_config,
                                                                        channel_config_loader)
     Create the DE server with the passed global configuration and config manager
decisionengine.framework.engine.DecisionEngine._get_de_conf_manager(global_config_dir,
                                                                           channel config dir,
                                                                           options)
decisionengine.framework.engine.DecisionEngine._get_global_config(config_file, options)
decisionengine.framework.engine.DecisionEngine._start_de_server(server)
     Start the DE server and listen forever
decisionengine.framework.engine.DecisionEngine.main(args=None)
     If args is None, sys.argv will be used instead If args is a list, it will be used instead of sys.argv (for unit testing)
decisionengine.framework.engine.DecisionEngine.parse_program_options(args=None)
     If args is a list, it will be used instead of sys.argv
```

## decisionengine.framework.engine.Workers module

Class that encapsulates a channel's task manager as a separate process.

This class' run function is called whenever the process is started. If the process is abruptly terminated—e.g. the run method is pre-empted by a signal or an os.\_exit(n) call—the Worker object will still exist even if the operating-system process no longer does.

To determine the exit code of this process, use the Worker.exitcode value, provided by the multiprocessing. Process base class.

This class manages and provides access to the task-manager workers.

The intention is that the decision engine never directly interacts with the workers but refers to them via a context manager:

```
with workers.access() as ws: # Access to ws now protected ws['new_channel'] = Worker(...)
```

In cases where the decision engine's block\_while or block\_until methods must be called (e.g. during tests), one should used the unguarded access:

```
with workers.unguarded_access() as ws: # Access to ws is unprotected
  ws['new_channel'].wait_until(...)
```

Calling a blocking method while using the protected context manager (i.e. workers.access()) will likely result in a deadlock.

## decisionengine.framework.engine.de\_client module

 ${\tt decisionengine.framework.engine.de\_client.console\_scripts\_main} ({\it args\_to\_parse=None})$ 

This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is an error message.

decisionengine.framework.engine.de\_client.create\_parser()

decisionengine.framework.engine.de\_client.execute\_command\_from\_args(argsparsed, de\_socket) argsparsed should be from create\_parser in this file

decisionengine.framework.engine.de\_client.main(args\_to\_parse=None)

If you pass a list of args, they will be used instead of sys.argv

## decisionengine.framework.engine.de query tool module

decisionengine.framework.engine.de\_query\_tool.console\_scripts\_main(args\_to\_parse=None)

This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is an error message.

decisionengine.framework.engine.de\_query\_tool.create\_parser()

decisionengine.framework.engine.de\_query\_tool.execute\_command\_from\_args(argsparsed, de\_socket)

Calls the proper function for the arguments passed to de\_query\_tool.

#### **Parameters**

- **argsparsed** (*Namespace*) Should be from create\_parser in this file.
- **de\_socket** (*ServerProxy*) RPC Server Proxy.

**Returns** Output of the command.

Return type str

**Parameters args\_to\_parse** (*list*, *optional*) – If you pass a list of args, they will be used instead of sys.argv. Defaults to None.

**Returns** Query result

Return type str

## **Module contents**

decisionengine.framework.logicengine package

## **Subpackages**

decisionengine.framework.logicengine.tests package

# **Submodules**

## decisionengine.framework.logicengine.tests.test\_cascaded\_rules module

```
decisionengine.framework.logicengine.tests.test_cascaded_rules.myengine()
decisionengine.framework.logicengine.tests.test_cascaded_rules.test_rule_that_does_not_fire(myengine)
decisionengine.framework.logicengine.tests.test_cascaded_rules.test_rule_that_fires(myengine)

decisionengine.framework.logicengine.tests.test_fail_on_error.test_true_literal_fact()
decisionengine.framework.logicengine.tests.test_pandas_fact module
decisionengine.framework.logicengine.tests.test_pandas_fact.mydata(y)
     Return a 'datablock' surrogate carrying a Pandas DataFrame, and a parameter named 'y' with value y.
decisionengine.framework.logicengine.tests.test_pandas_fact.myengine()
decisionengine.framework.logicengine.tests.test_pandas_fact.test_rule_that_does_not_fire(myengine)
     Rules that do not fire do not create entries in the returned actions and newfacts.
decisionengine.framework.logicengine.tests.test_pandas_fact.test_rule_that_fires(myengine)
decisionengine.framework.logicengine.tests.test_rule_with_negated_fact module
decisionengine.framework.logicengine.tests.test_rule_with_negated_fact.myengine()
decisionengine.framework.logicengine.tests.test_rule_with_negated_fact.test_rule_that_does_not_fire(mye
     Rules that do not fire do not create entries in the returned actions and newfacts.
decisionengine.framework.logicengine.tests.test_rule_with_negated_fact.test_rule_that_fires(myengine)
decisionengine.framework.logicengine.tests.test simple configuration module
decisionengine.framework.logicengine.tests.test_simple_configuration.myengine()
decisionengine.framework.logicengine.tests.test_simple_configuration.test_rule_that_does_not_fire(myeng)
     Rules that do not fire do not create entries in the returned actions and newfacts.
decisionengine.framework.logicengine.tests.test_simple_configuration.test_rule_that_fires(myengine)
Module contents
Submodules
decisionengine.framework.logicengine.BooleanExpression module
class decisionengine.framework.logicengine.BooleanExpression.BooleanExpression(expr)
     Bases: object
     evaluate(d)
         Return the evaluated Boolen value of this expression in the context of the given data 'd'.
exception decisionengine.framework.logicengine.BooleanExpression.LogicError
     Bases: TypeError
decisionengine.framework.logicengine.BooleanExpression.function_name_from_call(callnode)
decisionengine.framework.logicengine.BooleanExpression.maybe_fail_on_error(expr)
```

## decisionengine.framework.logicengine.FactLookup module

Establishes a policy for looking up a fact based on the given name.

To wit, the first fact with a given name is the one that is used in the evaluation of all subsequent facts.

As an example, consider the following configuration:

```
facts: { should_publish: "(True)",
}, rules: {
    publish_1: { expression: "should_publish", facts: ["should_publish"]
}, publish_2: {
        expression: "should_publish", actions: ["go_to_press"] facts: ["should_publish"]
} retract: {
        expression: "not should_publish", facts: ["should_retract"]
}
```

In the above, the first fact to be evaluated will always be the top-level facts (i.e. those not encapsulated by the 'rules' table). The rules labeled 'publish\_1' and 'publish\_2' both rely on the 'should\_publish' fact in their expressions, and they in turn create their own facts with the same name. FactLookup ensures that 'publish\_1' and 'publish\_2' will both use the evaluated fact from the top-level 'facts' table.

```
rule_for(fact name)
```

Selects rule required to evaluate fact with the supplied name.

```
Parameters fact_name (str) – Name of fact for which rule will be selected.
```

Return type str

Returns Rule name

```
sorted_rules(rules_cfg)
```

Rules sorted according to rule dependencies.

**Parameters rules\_cfg** (dict) – rules as specified in logic-engine configuration

Return type list

**Returns** Rules to be evaluated by the rule engine.

#### decisionengine.framework.logicengine.LogicEngine module

```
}
consumes()
Return
```

Return the names of all the items that must be in the DataBlock for the rules to be evaluated.

#### evaluate(db)

Evaluate our facts and rules, in the context of the given data. db can be any mappable, in particular a DataBlock or dictionary.

Parameters db (DataBlock) – Products used to evaluate facts.

```
evaluate_facts(db)
```

Parameters db (DataBlock) – Products used to evaluate facts.

Return type dict

Returns Evaluated fact values (e.g. True or False) for each fact name.

produces()

# decisionengine.framework.logicengine.Rule module

```
class decisionengine.framework.logicengine.Rule.Rule(rule_name, rule_cfg)
    Bases: object
```

In-memory representation of logic-engine rule, relying on parsing utilities in BooleanExpression.

```
evaluate(evaluated_facts)
```

Evaluates a compiled expression given the supplied facts.

**Parameters evaluated\_facts** (dict) – Initial fact values (e.g. True or False) for each fact name.

Return type bool

## decisionengine.framework.logicengine.RuleEngine module

Engine responsible for evaluating logic-engine rules.

This class is responsible for (a) forming a sorted set of rules that supports dependencies between them, and (b) evaluating the rules according to a specified fact-lookup policy.

```
execute(evaluated_facts)
```

Evaluates all rules given the supplied facts.

**Parameters evaluated\_facts** (dict) – Initial fact values (e.g. True or False) for each fact name.

Return type tuple

**Returns** Actions to be taken based on rule evaluation; new facts produced during that evaluation.

## decisionengine.framework.modules.translate\_product\_name module

## **Module contents**

## decisionengine.framework.taskmanager package

#### **Submodules**

## decisionengine.framework.taskmanager.ProcessingState module

The ProcessingState class can represent any of the following task-manager states:

## BOOT IDLE ACTIVE STEADY OFFLINE SHUTTINGDOWN SHUTDOWN ERROR

In addition, the class supports 'wait\_until(state)' and 'wait\_while(state)' methods, which, when called from a different process, block until the state has been entered or exited, respectively.

The 'RUNNING\_CONDITIONS' list is a list of states that a thread may have if it is started/starting. The 'STOPPING\_CONDITIONS' list is a list of states that a thread may have if it is stopped/stopping. The 'INAC-TIVE\_CONDITIONS' list is a list of states that a thread may have when it is not active

This object tracks the state of a process.

A number of convience wrappers are provided.

Additionally you may use the .lock attribute for with block to lock the state during specific operations.

#### get()

This function is a minimally locking check to fetch the state.

```
has_value(state)
inactive()
property lock
probably_running()
set(state)
    This function will lock (and possibly block) to ensure a consistent change to the state value.
    This function can be blocked using the .lock to force state sync between threads if need be.
should_stop()
wait_until(state, timeout=None)
wait_while(state, timeout=None)
```

class decisionengine.framework.taskmanager.ProcessingState.State(value)

```
Bases: enum. Enum
```

An enumeration.

```
ACTIVE = 2
```

BOOT = 0

ERROR = 7

IDLE = 1

OFFLINE = 6

```
SHUTTINGDOWN = 4
     STEADY = 3
decisionengine.framework.taskmanager.TaskManager module
Task Manager
class decisionengine.framework.taskmanager.TaskManager.Channel_dict, channel_name)
     Bases: object
     Decision Channel. Instantiates workers according to channel configuration
class decisionengine.framework.taskmanager.TaskManager.TaskManager(name, generation_id,
                                                                            channel_dict, global_config)
     Bases: object
     Task Manager
     data_block_put(data, header, data_block)
          Put data into data block
              Parameters
                  • data (dict) – key, value pairs
                  • header (Header) - data header
                  • data_block (DataBlock) - data block
     decision_cycle()
          Decision cycle to be run periodically (by trigger)
     do_backup()
          Duplicate current data block and return its copy
              Return type DataBlock
     get_consumes()
     get_loglevel()
     get_produces()
     get_state()
     get_state_name()
     get_state_value()
     run()
          Task Manager main loop
     run_logic_engine(data_block=None)
          Run Logic Engine.
              Parameters data_block (DataBlock) – data block
     run_publishers(actions, facts, data_block=None)
          Run Publishers in main process.
              Parameters data_block (DataBlock) – data block
```

SHUTDOWN = 5

```
run_source(src)
          Get the data from source and put it into the data block
              Parameters src (Worker) – source Worker
     run_transform(transform, data_block)
          Run a transform
              Parameters
                  • transform (Worker) - source Worker
                  • data_block (DataBlock) – data block
     run_transforms(data_block=None)
          Run transforms. So far in main process.
              Parameters data_block (DataBlock) – data block
     set_loglevel_value(log_level)
          Assumes log_level is a string corresponding to the supported logging-module levels.
     set_to_shutdown()
     start_sources(data block=None)
          Start sources, each in a separate thread
              Parameters data_block (DataBlock) - data block
     take_offline(current data block)
          offline and stop task manager
     wait_for_all(events_done)
          Wait for all sources or transforms to finish
              Parameters events_done (list) – list of events to wait for
     wait_for_any(events_done)
          Wait for any sources to finish
              Parameters events_done (list) – list of events to wait for
class decisionengine.framework.taskmanager.TaskManager.Worker(conf_dict, base_class,
                                                                         channel name)
     Bases: object
     Provides interface to loadable modules an events to sycronise execution
decisionengine.framework.taskmanager.TaskManager._create_module_instance(config_dict,
                                                                                     base class,
                                                                                     channel name)
     Create instance of dynamically loaded module
decisionengine.framework.taskmanager.TaskManager._find_only_one_subclass(module, base_class)
     Search through module looking for only one subclass of the supplied base_class
decisionengine.framework.taskmanager.TaskManager._make_workers_for(configs, base_class,
                                                                              channel_name)
```

## decisionengine.framework.taskmanager.module\_graph module

```
Ensure no circularities in produces and consumes.

decisionengine.framework.taskmanager.module_graph._consumed_products(*worker_lists)

decisionengine.framework.taskmanager.module_graph._produced_products(*worker_lists)

decisionengine.framework.taskmanager.module_graph.ensure_no_circularities(sources, transforms, publishers)
```

Ensures no circularities among data products.

     A DE Server using a private database
decisionengine.framework.tests.fixtures.PG_DE_DB_WITHOUT_SCHEMA(request:
                                                                   _pytest.fixtures.FixtureRequest)
                                                                   psycopg2.extensions.connection
     Fixture factory for PostgreSQL.
         Parameters request – fixture request object
```

#### **Returns** postgresql client

decisionengine.framework.tests.fixtures.**PG\_DE\_DB\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*) Load our PG schema into the database via this fixture so pytest knows the limitations on parallel usage of this database scope.

decisionengine.framework.tests.fixtures. $PG_PROG(request: \_pytest.fixtures.FixtureRequest, tmpdir\_factory: \_pytest.tmpdir.TempdirFactory) \rightarrow Iterator[pytest postgresql.executor.PostgreSQLExecutor]$ 

Process fixture for PostgreSQL.

**Parameters request** – fixture request object

**Returns** tcp executor

decisionengine.framework.tests.fixtures.**SQLALCHEMY\_PG\_WITH\_SCHEMA**(*PG\_DE\_DB\_WITHOUT\_SCHEMA*)

Get a blank database from pytest\_postgresql. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

decisionengine.framework.tests.fixtures.**SQLALCHEMY\_TEMPFILE\_SQLITE**(*tmp\_path*)

Setup an SQLite database with the pytest tmp\_path fixture. Then setup the SQLAlchemy style URL with that DB. The SQLAlchemyDS will create the schema as needed.

## decisionengine.framework.tests.test client errors module

Fixture based DE Server tests of the sample config

decisionengine.framework.tests.test\_client\_errors.test\_client\_cannot\_wait\_on\_bad\_state(deserver) Verify wait is for a valid state

#### decisionengine.framework.tests.test client server module

```
Fixture based DE Server for the de-client tests
```

```
decisionengine.framework.tests.test_client_server.test_client_print_product(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_columns(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_columns_query(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_json(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_not_real(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_not_string(deserver)

Make sure the public API is protected against bad values

decisionengine.framework.tests.test_client_server.test_client_print_product_query(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_types(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_vertical(deserver)

decisionengine.framework.tests.test_client_server.test_client_print_product_vertical(deserver)

decisionengine.framework.tests.test_client_server.test_client_status_msg_to_stdout(deserver)

Make sure the actuall client console call goes to stdout
```

## decisionengine.framework.tests.test\_defaults module

```
Fixture based DE Server tests of the sample config
decisionengine.framework.tests.test_defaults.test_client_can_get_de_server_show_channel_logger_level(des
     Verify unknown channel has NOTSET
decisionengine.framework.tests.test_defaults.test_client_de_config_is_json(deserver)
     Verify config can be fetched in json format
decisionengine.framework.tests.test_defaults.test_global_channel_log_level_in_config(deserver)
     Verify global_channel_log_level setting exists
decisionengine.framework.tests.test error on acquire module
decisionengine.framework.tests.test_error_on_acquire.test_source_only_channel(deserver)
decisionengine.framework.tests.test module program options module
decisionengine.framework.tests.test_module_program_options.test_acquire_for_sources()
decisionengine.framework.tests.test_module_program_options.test_config_templates()
decisionengine.framework.tests.test_module_program_options.test_descriptions()
decisionengine.framework.tests.test_module_program_options.test_help()
decisionengine.framework.tests.test_module_program_options.test_module_alias()
decisionengine.framework.tests.test guery tool server module
Fixture based DE Server for the de-query-tool tests
decisionengine.framework.tests.test_query_tool_server.test_query_tool_csv(deserver)
decisionengine.framework.tests.test_query_tool_server.test_query_tool_default(deserver)
decisionengine.framework.tests.test_query_tool_server.test_query_tool_invalid_product(deserver)
decisionengine.framework.tests.test_query_tool_server.test_query_tool_json(deserver)
\tt decisionengine.framework.tests.test\_query\_tool\_server.test\_query\_tool\_since({\it deserver})
decisionengine.framework.tests.test reaper module
Fixture based DE Server for the reaper tests
decisionengine.framework.tests.test_reaper.test_client_can_get_de_server_reaper_start_delay(deserver)
     Verify reaper can start with delay
decisionengine.framework.tests.test_reaper.test_client_can_get_de_server_reaper_status(deserver)
     Verify reaper status
decisionengine.framework.tests.test_reaper.test_client_can_get_de_server_reaper_stop(deserver)
     Verify reaper can stop
```

## decisionengine.framework.tests.test restart channel module

decisionengine.framework.tests.test\_restart\_channel.deserver\_mock\_data\_block(mock\_data\_block)
decisionengine.framework.tests.test\_restart\_channel.test\_restart\_channel(deserver\_mock\_data\_block)

#### decisionengine.framework.tests.test sample config module

Fixture based DE Server tests of the defaults

- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_double\_set\_de\_server\_channel\_log\_leve Verify set log level to current level isn't an error
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_channel\_config(deserver) Verify config has expected items

decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_channel\_log\_level(deserver\_channel\_log\_level)

decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_show\_logger\_level(deserver)

- Verify can fetch log level for a channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_show\_config(deserver) Verify config has expected items
- Verify can fetch log level
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_status(deserver) Verify channel enters stable state
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_products(deserver) Verify client can get channel products
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_products\_no\_channels(deserver)

  Verify client can get channel products even when none are run
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_kill\_one\_channel(deserver) Verify client can kill a single channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_kill\_one\_channel\_force(deserver) Verify client can kill a single channel with force
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_kill\_one\_channel\_timeout(deserver)

  Verify client can kill a single channel with timeout
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_set\_de\_server\_channel\_log\_level(deserver) Verify set log level for a channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_start\_one\_channel(deserver) Verify client can start a single channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_stop\_channels(deserver) Verify client can stop channels
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_stop\_one\_channel(deserver) Verify client can stop a single channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_stop\_server(deserver) Verify de-client can run -stop

```
decisionengine.framework.tests.test_sample_config.test_client_cannot_double_start(deserver)

Verify client cannot double start channels
```

- decisionengine.framework.tests.test\_sample\_config.test\_client\_get\_non\_real\_channel(deserver) Verify config for missing channel does what it should
- decisionengine.framework.tests.test\_sample\_config.test\_client\_set\_channel\_log\_fails\_cleanly(deserver) Verify graceful fail on bogus channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_start\_non\_real\_channel(deserver) Verify start for missing channel does what it should
- decisionengine.framework.tests.test\_sample\_config.test\_client\_stop\_non\_real\_channel(deserver) Verify stop for missing channel does what it should
- decisionengine.framework.tests.test\_sample\_config.test\_client\_wait\_timeout\_works(deserver) Verify channel enters stable state and timeout works too

## decisionengine.framework.tests.test\_source\_proxy module

Fixture based tests of the SourceProxy module.

```
decisionengine.framework.tests.test_source_proxy.test_stop_failing_source_proxy(deserver_fail) decisionengine.framework.tests.test_source_proxy.test_working_source_proxy(deserver)
```

# decisionengine.framework.tests.test start with bad channels module

```
Fixture based DE Server tests of invalid channel configs
```

```
decisionengine.framework.tests.test_start_with_bad_channels._consumes_not_subset(test_str)
decisionengine.framework.tests.test_start_with_bad_channels._expected_circularity(test_str)
decisionengine.framework.tests.test_start_with_bad_channels._missing_consumes(name)
decisionengine.framework.tests.test_start_with_bad_channels._missing_produces(name)
decisionengine.framework.tests.test_start_with_bad_channels.test_client_can_get_products_no_channels(design)
```

Verify client can get channel products even when none are run

# decisionengine.framework.tests.test start with no channels module

```
Fixture based DE Server tests of the server without channels, then with them
```

```
decisionengine.framework.tests.test_start_with_no_channels.deserver_mock_data_block(mock_data_block)
decisionengine.framework.tests.test_start_with_no_channels.test_start_from_nothing(deserver_mock_data_block)
```

## **Module contents**

## decisionengine.framework.util package

#### **Submodules**

## decisionengine.framework.util.fs module

```
{\tt decisionengine.framework.util.fs.} \textbf{files\_with\_extensions} (\textit{dir\_path}, *\textit{extensions})
```

Return all files in dir\_path that match the provided extensions.

If no extensions are given, then all files in dir\_path are returned.

Results are sorted by channel name to ensure stable output.

## decisionengine.framework.util.metrics module

```
class decisionengine.framework.util.metrics.Counter(name, documentation, labelnames=(),
                                                            namespace=", subsystem=", unit=", reg-
                                                            istry=<prometheus_client.registry.CollectorRegistry
                                                            object>, _labelvalues=None)
     Bases: prometheus_client.metrics.Counter
class decisionengine.framework.util.metrics.Gauge(*args, **kwargs)
     Bases: prometheus_client.metrics.Gauge
     Override prometheus client Gauge so that muliproccess_mode 'liveall' is the default as opposed to 'all'
     _DEFAULT_MULTIPROC_MODE = 'liveall'
     __determine_multiprocess_mode_existence(*args, **kwargs)
class decisionengine.framework.util.metrics.Histogram(name, documentation, labelnames=(),
                                                              namespace=", subsystem=", unit=", reg-
                                                              istry=<prometheus_client.registry.CollectorRegistry
                                                              object>, _labelvalues=None, buckets=(0.005,
                                                              0.01, 0.025, 0.05, 0.075, 0.1, 0.25, 0.5, 0.75,
                                                              1.0, 2.5, 5.0, 7.5, 10.0, inf))
     Bases: prometheus_client.metrics.Histogram
class decisionengine.framework.util.metrics.Summary(name, documentation, labelnames=(),
                                                            namespace=", subsystem=", unit=", reg-
                                                            istry=eprometheus_client.registry.CollectorRegistry
                                                            object>, _labelvalues=None)
     Bases: prometheus_client.metrics.Summary
```

## decisionengine.framework.util.reaper module

```
A stand-alone script purges data in database older than specified in configuration. Configuration file has to have this
bit added:
     {
             "dataspace" [{ "retention_interval_in_days"][365,]
                   "datasource": { ... }
                 }
Can be used in a cron job.
decisionengine.framework.util.reaper.main()
decisionengine.framework.util.singleton module
class decisionengine.framework.util.singleton.ScopedSingleton
     Bases: decisionengine.framework.util.singleton.Singleton
     Singleton pattern using Metaclass with weak refs
     _instances = <WeakValueDictionary>
class decisionengine.framework.util.singleton.ScopedSingletonABC(name, bases, namespace,
                                                                        **kwargs)
     Bases: abc.ABCMeta, decisionengine.framework.util.singleton.ScopedSingleton
class decisionengine.framework.util.singleton.Singleton
     Bases: type
     Singleton pattern using Metaclass with strong refs
     _instances = {}
class decisionengine.framework.util.singleton.SingletonABC(name, bases, namespace, **kwargs)
     Bases: abc.ABCMeta, decisionengine.framework.util.singleton.Singleton
decisionengine.framework.util.sockets module
decisionengine.framework.util.sockets.get_random_port()
decisionengine.framework.util.subclasses module
decisionengine.framework.util.subclasses._derived_class(cls, base_class)
     Only matches subclasses that are not equal to the base class.
decisionengine.framework.util.subclasses.all_subclasses(module, base_class)
     Return all of a module's subclasses of the given base class.
```
